Acknowledgments

The preparation of State Court Caseload Statistics: Annual Report, 1984 has been supervised and greatly assisted by the Court Statistics and Information Systems (CSIS) Committee appointed from the membership of the Conference of State Court Administrators (COSCA). The CSIS Committee members have given generously of their time, talent, and experience. Their participation has been invaluable to the project staff. The positive control exerted by COSCA through this committee, using a review and approval process, has greatly enhanced the quality of this report.

The COSCA CSIS Committee members, however, are not the only COSCA members whose assistance has been vital to the production of this document. The administrators and their staff in all the 50 states, the District of Columbia, Guam, and Puerto Rico have provided the Court Statistics and Information Management Project with whatever research materials they had available, both published and unpublished, and

they have been consistently patient and helpful in answering written and telephoned inquiries for more data or for explanations of the data provided. Their continuing support of the development of a national data base of state court statistics within the National Center for State Courts is the crucial element in determining the quality of the statistics that are being gathered.

The members of the National Conference of Appellate Court Clerks are other indispensable sources of much-needed data. The clerks volunteered to provide and verify appellate court data that in many states are unavailable from any other source. Their assistance has been invaluable in increasing the quality of appellate court data available to the project.

The Court Statistics and Information Management Project staff would like to recognize and thank all these many individuals who have contributed to this eighth in the series of annual reports on state court caseload statistics.

Introduction

Introduction

Court Statistics and Information Management Project

The Annual Report series of state court caseload statistics is the product of the continuing cooperative effort between the Conference of State Court Administrators (COSCA) and the National Center for State Courts (NCSC). Financial support and management, project management, and project staffing responsibility are assumed by the Court Statistics and Information Management (CSIM) Project, formerly called the National Court Statistics Project (NCSP) of the NCSC. COSCA, through its Court Statistics and Information Systems Committee, provides general policy review, guidance, and control over all project activities. The National Center for State Courts funded production of this entire volume, except for printing costs, which were provided by the Bureau of Justice Statistics in the U. S. Department of Justice.

The goals of the Court Statistics and Information Management Project are to collect, compile, analyze, and disseminate comparable state court caseload statistics, and to help states improve the quality of the data by assisting the states in resolving their statistical problems. The Annual Report series responds directly to the first goal by compiling all available state court caseload data from the 50 states, the District of Columbia, Guam, and Puerto Rico.¹

Dynamics of improvement

Historical development. Ideas and suggestions for improvement of this state court caseload statistical series have come from many sources, and have provided the creative stimulus needed to assess current CSIM Project efforts and to map future directions.

Continuation of evolutionary improvement in this statistical series rests, ultimately, upon the ability of the CSIM Project to maintain a productive dialogue and flow of ideas among the producer-compilers of the Annual Report, its data sources, and its end users. Much improvement in state court statistics has already been achieved, but much remains to be done.

During compilation of the State of the Art and the 1975 Annual Report, a staggering classification problem resulted from the multitude of terms being used by the states to report their caseloads. The need for both a model annual report and a statistical dictionary of terms for court usage became obvious. These documents, published in 1980, are to be used as tools to assist the states in improving their

¹Repetition of "50 states, the District of Columbia, Guam, and Puerto Rico" becomes very cumbersome. Throughout the rest of this report, "states" and "court systems" will be used for the reporting units that include the District of Columbia, Guam, and Puerto Rico.

statistics. Such improvement should eventually be reflected in future annual reports.

The State Court Model Annual Report² is a flexible working outline of critically needed, basic management data that should, at a minimum, be included in state court annual reports. The model identifies the kinds of data and the types of display required to meet management needs. The State Court Model Statistical Dictionary³ and Supplement are companion documents which provide common terminology, definitions, and usage for reporting civil, criminal, traffic, juvenile, and appellate caseload inventory and manner of disposition as presented in the model annual report. The classification structure and definitions serve as models of preferred terminology and meanings for purposes of statewide and national comparison. The first edition of the dictionary covers those data elements essential for classifying court caseload inventory and manner of disposition. A supplement to the dictionary, published in 1984, contains revisions of those terms that experience has demonstrated needed improvement, as well as additional data elements for court caseload (events in case processing) which are needed to determine status of pending cases. These documents do not include the recently approved appellate court data elements that will be used for the first time in this 1984 Annual Report. These definitions will be included in the introduction to the appellate court statistics section of this volume.

Both of these documents must be viewed as a logical first step in promoting comparable court statistics. They were not available to states in time to affect their reporting systems or the national Annual Reports before 1981. Nevertheless, their effect will be noticeable in each succeeding national-level Annual Report because the CSIM Project's technical assistance effort is interwoven with the Annual Report national statistical series. This is accomplished by helping states adopt the suggestions in the Model Annual Report and Model Statistical Dictionary and by proactive identification of particular state systems that could benefit from technical assistance directed at helping resolve existing methodological problems of classification structure, terminology, definition of local data-reporting procedures, and data handling/transformation procedures. To the extent that such technical assistance suggestions are adopted, individual states directly benefit and the Annual Report national statistical series indirectly benefits.

²National Court Statistics Project, National Center for State Courts, State Court Model Annual Report (Williamsburg, VA, 1980).

³National Court Statistics Project, National Center for State Courts, State Court Model Statistical Dictionary (Washington, D.C.: U.S. Government Printing Office, 1980); Supplement (Williamsburg, National Center for State Courts, 1984).

The Court Case Management Information Systems Manual⁴ was produced jointly by the National Court Statistics Project (now CSIM) and the State Judicial Information Systems Project to provide a methodology for building a court information system that would provide the data needed for both daily court operations and longer-term case management, resource allocation, and strategic planning.

State Court Jurisdiction Guides for Statistical Reporting. The automation of the database required a degree of precision in coding every data element that was unavailable with the 1979 and 1980 databases. The statistical profiles for those years suffered from imprecision and ambiguity that affected the quality of data. For example, in previous years general terms were used that did not state what types of cases were included in categories such as "civil" and "other civil." These terms should not have been used to make comparisons among courts. A major effort was required to identify specifically the subject matter jurisdiction and methods of counting cases in the state courts. This effort was undertaken in two stages. The first stage focused on problems related to counting cases in the trial courts, and culminated in the publication of the 1984 State Trial Court Jurisdiction Guide for Statistical Reporting.⁵ Information from this jurisdiction guide was incorporated into the database for 1981. Work on the jurisdiction guide convinced staff of an essential link between the guide and the providing of comparable data. Stage two involved the preparation of the 1984 State Appellate Court Jurisdiction Guide for Statistical Reporting⁶ for the 1984 appellate court database.

The impact of the Jurisdiction Guides for Statistical Reporting have been profound. See the introduction to the 1981 Annual Report for a complete description of the effect of the Trial Court Jurisdiction Guide. The following insights explain differences between 1984 appellate data reported in this volume, and those data reported in previous editions of this series. This guide has now enabled staff to:

1. Classify an appellate court's caseload and disposition data into standard case types.
2. Distinguish between an appellate court's mandatory and discretionary jurisdiction--which will allow studies on agenda setting and the impact of discretionary jurisdiction on court caseload.
3. Identify proceedings that some appellate courts count as cases, but which do not comport with model national definitions of an appellate court case (e.g., motions for time extensions).
4. More clearly identify different operating structures and procedures among the various appellate courts (which will facilitate research on the impact of different operating procedures on court workload, e.g., the use of panel rather than en banc decision-making).

⁴Clifford and Jensen, Court Case Management Information Systems Manual (Williamsburg, National Center for State Courts, 1983).

⁵Clifford and Roper, Trial Court Jurisdiction Guide for Statistical Reporting (Williamsburg, National Center for State Courts, 1985).

⁶Roper, 1984 State Appellate Court Jurisdiction Guide for Statistical Reporting (Williamsburg, National Center for State Courts, 1985).

5. More explicitly describe the link between administrative agencies and the appellate courts.
6. Improve significantly the understanding of missing data in national statistics (e.g., was the data excluded because the court did not have jurisdiction, or because it had jurisdiction but data were unavailable, or the court had jurisdiction but the data were collapsed with that of another case type?).
7. Identify the point in the process when various appellate courts count cases (e.g., at the filing of either the notice of appeal or the record).
8. More accurately identify the components of "opinion counts" in state appellate courts (e.g., do they include full majority opinions exclusively, or do they also include per curiam opinions and/or memoranda?).
9. Correct double counting problems that resulted from an inability to identify whether petitions to appeal that were granted, retained the same docket number or were refiled as regular appeals.
10. Acquire complete lawyer/clerk staffing data on all state appellate courts for use in various productivity measures (e.g., opinions written per judge).
11. Identify some procedures used in the granting/denying of discretionary review in the state appellate courts (e.g., the number of justices/judges necessary to grant review).

Uses of court statistical data

The four major uses of court statistical data, as identified in the CSIM publications, State Court Caseload Statistics: The State of the Art and Court Case Management Information Systems Manual⁷, are (1) operational (aiding in the execution of routine day-to-day activities at the local level); (2) management (decision-making at the state or local level concerned with improvement of the court process and system-wide efficiency in the use of court resources); (3) internal planning and research (goal setting and policy planning to establish long-term programs and identify evolving problems); and (4) indirect court uses (decision-making by those outside the courts concerned with policy making or research about court operations). The various uses of court statistics require different levels of detail and analysis, but the availability of detailed statistics is dependent upon the statistical reporting system used at the state or local level. This annual report restricts its scope to the level of detail currently available from state-level reporting systems.

Operational decisions are made at the local level and require detailed information on a case-by-case basis. These decisions must be made daily and cannot be based upon year-end summary statistics such as those contained in this 1984 report.

Management decisions can be made at either the state or local level and require aggregation of detailed information used for operational decisions. Caseload management data, such as that needed to determine the status of the preparation of the record for appeal or to

⁷National Court Statistics Project, National Center for State Courts, State Court Caseload Statistics: The State of the Art (Washington, D.C.: U.S. Government Printing Office, 1978). Clifford and Jensen, Court Case Management Information Systems Manual (Williamsburg, National Center for State Courts, 1983).

generate exception reports, are gathered by some state reporting systems. This kind of information, however, is also case specific and too detailed to be compiled and used for nationwide comparisons. In contrast, state-level summary statistics are useful for management purposes in several areas: comparisons of time lapses in case processing to establish norms or guides; analyses to determine assignments of judges needed to relieve backlog; analyses to determine the need for additional judges, support personnel, or facilities; and analyses to determine the impact of an intermediate appellate court on the state system.

Caseload and case processing are major components of court workload. The CSIM Project has defined workload to mean all court-related matters that consume time and effort (hence, purely administrative functions are also included as workload). Measurement of court workload per se is not directly addressed in this report, but caseload inventory data and data regarding the number of trials are partial indicators of judicial activity. The data presented in this report reflect the quantity of management data available from each state's reporting system in published and unpublished reports.

Internal planning and research, as well as planning and research by those outside the court system, require a much wider range of data and analysis than operational and management decisions. The information necessary for these purposes often includes not only an aggregation of data on caseload and caseflow, but also specific data regarding status of cases, as well as information on court operations, judicial budgets, actions prior to filing a case, and actions after disposition of a case. Of interest to some individuals within and outside the court system are studies on a wide range of other subjects, such as the effect and cost of litigation, bail availability and uniformity including recognizance/10% bail programs, the validity of case weighting techniques, sentence disparity patterns, the effects of plea negotiation on caseloads, and the impact of legislation on court management. To answer these questions is, however, beyond the capabilities of most state or even local court information systems. Basic information on caseload and caseflow is adequate for many other planning and research issues where the level of needed detail is not as high. These latter kinds of issues include, for example, case filing and disposition trend analysis, caseload composition analysis, analysis of reversal rates, time lapse analysis to establish norms and guides, and forecasting of caseload volumes to determine resource and facilities needs.

Scope of the data in the annual report series

The first annual report (1975) presented available caseload data for state appellate courts, trial courts of general jurisdiction, and for selected categories (juvenile, domestic relations, probate, and mental health) in limited jurisdiction courts. The second annual report (1976) again presented available data for appellate courts and courts of general jurisdiction, and also included available caseload data for all limited jurisdiction courts. As data from each court level become more complete, future aggregation of trial court caseloads should become more meaningful.

The 1976 report was expanded to include Puerto Rico. Data from Guam were added for the 1977 court year. The scope of future reports

will be broadened to include American Samoa and the Virgin Islands when these data become available.

The 1979 and 1980 Annual Reports made major advances in eliminating repetitiveness in presenting data elements in the summary tables and in reorganizing the data in the summary tables based on completeness and comparability. The 1981 volume reflected for the first time the findings of the Trial Court Jurisdiction Guide for Statistical Reporting, permitting the further arrangement of data to indicate those jurisdictions having comparable caseloads.

The 1982 and 1983 reports were postponed in order to make the series current with the publication of this 1984 volume. Publication of the 1985 Annual Report is planned for December 1986.

This report reflects court organization and jurisdiction as they existed in 1984. The reader, however, should keep in mind that court systems are not static entities. For example, in 1984 North Dakota consolidated three separate county courts into one. The dollar amount limits of civil jurisdiction in many courts change periodically. Since court organizational or jurisdictional characteristics change over time, caution should be exercised in attempting to compare the data in this 1984 report with earlier data or with more current data.

In addition, special care must be taken when comparing the data in this 1984 volume with previous editions of this series. The Appellate Court Jurisdiction Guide for Statistical Reporting was used for the first time in coding the appellate data, making possible the separation of appellate cases into mandatory and discretionary jurisdiction, and clarifying what is included in opinion counts. The more precise classification of appellate data in 1984, combined with the updating of the trial court jurisdiction guide in order to classify the 1984 trial court data, makes the 1984 data the most comparable of the series.

Data collection

Data sources. The sources of data for the tables presented in this series are the published annual reports provided by the states and unpublished statistical material requested of, and supplied by, state court administrators and appellate court clerks. (Appendix B of this report identifies the sources of data from each state.) Additional relevant information was secured from appropriate personnel in each state. Telephone contact and follow-up correspondence were used to collect missing data, confirm the accuracy of available data, and determine the legal jurisdiction of each court. Information was collected concerning the number of judges per court or court system (from annual reports, offices of state court administrators, and appellate clerks); the state population (based on Bureau of the Census 1984 revised estimates); other 1984 demographic data (taken from the Statistical Abstract of the United States: 1984⁸); and special characteristics regarding subject matter jurisdiction and court structure.

Each state profile and court system chart underwent major revisions to reflect jurisdictional changes identified by the 1984 Jurisdiction Guides for Statistical Reporting.

⁸U.S. Bureau of the Census, Statistical Abstract of the United States: 1984 (Washington, D.C.: U.S. Government Printing Office, 1984).

Verification of data. In order to produce the statistics contained in this report, a great deal of effort was expended by CSIM Project staff in collecting missing data, whether from published or ancillary sources, in defining terminology, and in identifying categories in which cases should be placed. In other words, data contained in this report cannot be replicated solely from available published material. Yet, even after this extensive data-gathering effort, large gaps remain in the data collected.

Although attempts to reconcile obvious discrepancies in reported data were made, the CSIM Project staff did not have the resources to assess the underlying validity or accuracy of the data received from the states. For example, the published cumulative case statistics for appellate courts or for trial courts frequently did not balance with reported totals within each category.

Finally, the format, content, and limitations of data tables have been reviewed and approved by the COSCA CSIS Committee, which guides the Court Statistics and Information Management Project.

Types of data included. As a result of the fact that few states report data suitable for all kinds of planning and research purposes, and because most states report only certain types of data, the NCSP initially chose to include in the national series only those kinds of data that either were already fairly widely available or could be made available without requiring undue effort. Enough states reported trend data, caseload by category, number of reversals, and time-to-disposition data to warrant inclusion of these topics in this report, and some preliminary analyses can be made. For those states not supplying basic data, blanks in the summary tables draw attention to the missing data. In the past, all data supplied by a state, complete or not, were entered in the summary tables. Beginning in 1979, only data that are complete (or at least 90% complete for a case category) are displayed in the summary tables. This was done to facilitate comparability.

Many current variations in court data, as indicated by footnotes in the summary tables, must be considered before summary tables can be constructed to make comparisons among courts or states. Variations that limit the comparability of interstate data in 1984 include: court organization, subject matter jurisdiction, case definition, units of count, completeness, accuracy, and reporting periods.

Variations in reporting periods. As indicated on profile headings and in Figure A, most states report data by calendar year; many report by fiscal year, however, and a few report appellate court data by court term. Therefore, the time spans covered in this report are not always directly comparable.

Although data included in this report cover reporting periods of approximately uniform length, the starting and ending dates for the reporting periods vary both within and among states. Differences in reporting periods have little effect on cumulative data elements, such as filings and dispositions, since no matter when the reporting period began and ended, the data cover one complete year. Pending data are greatly affected, though, since they represent a "snapshot" in time and can vary greatly depending on when that snapshot was taken. Figure A displays the actual reporting periods for all courts.

Data display

Case category classifications. CSIM case categories used for this 1984 report are those chosen by the COSCA CSIS Committee for inclusion in the State Court Model Annual Report and State Court Model Statistical Dictionary. These case categories appear as principal headings in the summary tables in Part I, and in each state's system chart in Part III. The CSIM main headings are categories used uniformly for all the states.

Format used. Summary tables (Part I). Complete data from each state profile were transferred into summary tables designed to display the kinds of available data that could be aggregated. The summary tables are divided into two major sections (appellate and trial) to reflect the two major levels of courts.

Appellate courts include both courts of last resort (the final court or courts of appeal within a state) and intermediate appellate courts (the court or courts in which the primary work is the disposition of initial appeals received from trial courts of general jurisdiction or administrative agencies, and in which some decisions are subject to appeal or review by a court of last resort).

For purposes of this report, a trial court is considered to be a court of general jurisdiction if it meets one of the following criteria:

- The individual state considers it a general jurisdiction court.
- Felony cases are tried and felony sentences given for all types of felony cases.
- The judges of the court are general jurisdiction court judges sitting on temporary assignment.

All other trial courts are classified as limited jurisdiction courts.

In the 1975 Annual Report, the states were arranged alphabetically in all summary tables. In 1976 the trial courts handling criminal cases were grouped according to the way in which criminal cases were counted in each court. In the 1979 report, a further evolution in the grouping of states was added to all trial court case type tables (except juvenile) in order to place together those courts that have similar subject matter jurisdiction. Trial court case type tables are also arranged in this volume as follows:

Complete state data:

1. Exclusive court jurisdiction: States where one court has exclusive case type jurisdiction.
2. Not exclusive court jurisdiction: States where two or more courts have case type jurisdiction.

Incomplete state data:

3. States where one or more courts have case type jurisdiction, but complete data are not reported by one or more courts.

Footnotes. Standard footnote headings specifying the completeness and quality of the data are used on all summary tables and will continue to be used in the Annual Report series. If more information on the data presented in the summary tables is needed, the user should contact this project at the National Center for State Courts to obtain information concerning individual court statistical profiles.

Trend tables (Part II). This is a new section for the Annual Report series. In past volumes, staff compiled a single table that illustrated trend data for total civil, criminal, and juvenile filings; however, a significant number of professionals in the field have commented that it would be more useful to specifically delineate civil and criminal caseload into their important components. The civil case types studied in this section are tort, contract, real property rights, and small claims cases. The criminal case type identified in these tables is felonies.

Court system charts (Part III). After the 1984 case data available from each state were classified, a profile of the courts in each state was constructed. See Appendix C for a prototype of the statistical profiles used in the 1984 data collection. These statistical profiles are no longer published in these volumes. They now serve as worksheets for compilation of the data base. Each state court system chart for 1984 depicts the organization of the court system within the state, the jurisdiction and route of appeal for each court, the number of judges, and information on the types of trials.

Data interpretation

Several devices are used in the summary tables for analyzing the caseload data. The measures selected for use vary according to the data being analyzed and are explained in the face sheets accompanying each group of summary tables under headings such as: disposed cases as a percent of filed cases, filed cases per unit of population, and filed and disposed cases per judge.

Continuing development of the series

The Annual Report series is an evolving product. Given the nature of this newly developing science of gathering, reporting, and analyzing state court data, additions and refinements will be a fact of life in successive volumes of the series. As more is learned about the quality of the data, more specific suggestions will be given for their proper use, along with warnings to help avoid their abuse.

Figure B presents a helpful cross-reference to summary tables in previous editions of this series. This will assist the user to locate similar information that may have been rearranged on the summary tables over the years.

It is important to the long-term improvement of the statistical series that these early volumes in the series be circulated widely enough to encourage reader/user ideas and commentary, and that they be used as a vehicle for developing solutions to problems encountered during the statistical series production process. As each successive volume is published, the CSIM Project can consider the feedback subsequently received from users of the documents, thereby further enhancing succeeding volumes.

It should also be pointed out that for the fourth year, the data contained in this report are available in computer-readable form. There are two data sets: appellate caseload and trial caseload. These data sets were used to construct most of the summary tables. This year Tables 1, 7, 9, 20, 24-25, and 30-37 were compiled by hand. This number should be reduced in future years.

The jurisdiction guides have affected several aspects of summary table preparation. Most of these will be discussed in the face sheet accompanying each summary table.

The process of building toward meaningful statistics takes time. Concurrent with expanding and refining the Annual Report national statistical series, the CSIM effort must encourage movement toward quality and precision in state court statistics. The necessarily long-term nature of this evolutionary process will contribute greatly to year-to-year improvements and enhancements of the statistical series. Given the complexity of the problems being faced, building toward comparability, quality assurance, and appropriate detail is a necessary incremental process. It is in this light that the CSIM Project presents the data and analysis contained in the Annual Report, 1984.

Comments and corrections are a welcome part of the revision process, and should be directed to the Court Statistics and Information Project of the National Center for State Courts, 300 Newport Avenue, Williamsburg, Virginia, 23187-8798.

Note: The Project is constantly developing, therefore in many instances, the composition of tables changed dramatically over time. The cross-references are intended to provide a quick reference to basic subject-matter shared by the tables.

Part I
1984 State court caseload
summary statistics

Appellate court summary statistics

In this section, tables are presented to show the caseload of appellate courts in 1984. Appellate courts are subdivided into courts of last resort (the final court of appeal within a particular state) and intermediate appellate courts (courts whose primary work is the disposition of initial appeals received from trial courts of general jurisdiction or administrative agencies, and whose decisions are usually subject to appeal or review by a court of last resort). States have been divided further into the following categories: (1) states with one court of last resort and one intermediate appellate court; (2) states with no intermediate appellate court; and (3) states with multiple appellate courts at any level. This typology facilitates comparisons of courts sharing a basic structure.

The significant differences in the definition and classification of cases in appellate courts have led the CSIM staff to include as 'cases' any appeal, any original proceeding, or any request to appeal case.

Data presented in the following tables are compiled from all data that are available, both in annual reports and in unpublished reports provided by individual appellate court clerks and state court administrators.

During the past several years, it became clear to Project staff that ambiguities existed among appellate court data elements in the national database. The most significant questions stemmed from an inability to distinguish between a court's mandatory and discretionary jurisdiction. The 1984 Appellate Court Jurisdiction Guide for Statistical Reporting was prepared and published to remedy this situation. This volume of the Annual Report series is the first to incorporate improvements mandated by the Jurisdiction Guide.

Two factors restrict comparability from state to state of these appellate court caseload data: variations in court jurisdiction, and variations in the way cases are counted.

Major variation from state to state in court jurisdiction among appellate courts results from the kind and amount of discretionary jurisdiction over initial appeals granted to courts of last resort and to intermediate appellate courts.

The following tables facilitate the comparison of a court's discretionary and mandatory jurisdiction. Mandatory jurisdiction is defined as those cases for which a court must reach a decision on the merits--these cases are often referred to as appeals of right. Discretionary jurisdiction is defined as those cases to which a court can decline review on the merits. In discretionary cases, the courts first decide whether to grant review using some summary

procedure. Discretionary cases that are granted review usually follow the same appellate procedures as do mandatory cases. This Report therefore, organizes its specific case types into three categories: (1) mandatory cases; (2) discretionary petitions; and (3) discretionary petitions that are granted review.

The specific case types for each of the three broad categories described above, include civil, death penalty, other criminal, administrative agency and juvenile appeals from final judgments; as well as four types of other proceedings which include disciplinary, advisory opinions, original jurisdiction, and interlocutory decision cases.

The second variation in appellate court case data results from differences in the point at which cases are counted, and how they are counted. Some courts count cases as soon as the notice of appeal is filed, while others count them at a later event, such as the filing of the record or the filing of the appellant's brief (see Figure C).

Additionally, courts may inflate or deflate their caseload by the way they count appeals of criminal convictions for two or more defendants, by whether cross appeals are counted as separate cases, and by the way they count appeals granted through discretionary jurisdiction. Courts with discretionary jurisdiction sometimes report the total number of cases filed without distinguishing between mandatory and discretionary jurisdiction cases; or they separate mandatory and discretionary cases filed but do not indicate the number of requests for discretionary review granted; or they provide separate data for mandatory cases, discretionary jurisdiction granted, and discretionary jurisdiction denied; or they combine mandatory jurisdiction cases and cases accepted for review, but report separately the total number of petitions for review filed, resulting in double counting of granted petitions for review.

In trying to deal with these many variations in case data, the Court Statistics and Information Management Project has presented as much information as possible about the caseload. The jurisdiction of each court is outlined briefly in the court system chart for each state located in Part III of this Report.

The appellate tables that follow (Numbers 1 through 7) are sequenced from the presentation of general data to more specific analytical tables. The tables present estimates of a national appellate caseload, total reported appellate cases, productivity measures by general case types, the number of opinions written by court, and time to disposition of appeals.

FIGURE C: Methods of counting cases in state appellate courts, 1984.

Caseload data are not comparable in state appellate courts unless cases are counted in the same way among the courts. The method of counting cases must be employed as one tool in organizing appellate courts so that their caseloads are comparable. Figure C illustrates some of the more important components of the various methods used in counting cases in state appellate courts. A blank space indicates that no information was available for that data element. All codes used in this figure are defined at the end of the figure.

The first component in understanding how appellate cases are counted is the point in the appellate process where the court counts a case as part of its caseload. Courts that begin counting cases earlier in the process (e.g., at notice of "intent to appeal"), rather than at a later point (e.g., completion or filing of the record), are likely to have a larger caseload because they are counting as cases litigation that is dismissed/withdrawn/settled before completion of the record. The column entitled, "Case counted at:" indicates the starting point for counting each case in state appellate courts. In some states, all appeals are filed with the court of last resort, which then assigns, (i.e., transfers) cases to the intermediate appellate court. This situation is indicated by the word "transfer." The column

labelled, "Case filed with:" indicates the court with which the "intent to appeal" document is filed.

The last component of counting cases involves an identification of whether a reinstated/reopened case is counted as a new filing, or retains the same docket number. Although the practice of counting reopened/reinstated cases is not as widespread as it is in the trial courts, and is less of a problem in courts of last resort than in intermediate appellate courts, the accuracy in count is still noteworthy. This information is provided in the columns entitled, "Does the court count reinstated/reopened cases in its count of new filings?" A "NO" indicates the case retains the same docket number. "RARELY" means that in a few situations, cases are treated as new filings (e.g., a case remanded, that resulted in a new trial and a new appeal based on a different point of law). "YES OR FREQUENTLY" indicates that the court routinely counts reopened and reinstated cases as new filings. Occasionally, special situations are indicated in these columns. Courts, for example, that issue new docket numbers to such cases, but segregate these cases from other new filings for statistical purposes, are indicated by the words "IDENTIFIED SEPARATELY."

*Footnotes:

Kansas: Docketing occurs 21 days after a notice of appeal is filed in the trial court. Some cases are never docketed in the appellate court.

FIGURE C: Methods of counting cases in state appellate courts, 1984. (continued)

Ohio--Court of Appeals: The clerk of the trial court is also the clerk of the Court of Appeals.

Oklahoma--The courts do not count reinstated cases as new filings, but do count any subsequent appeal of an earlier decided case as a new filing. The notice of appeal refers to the petition in error.

Pennsylvania--Supreme Court: Mandatory cases are filed with the trial court, and discretionary cases are filed with the appellate court.

Source: 1984 State Appellate Court Jurisdiction Guide for Statistical Reporting.

TABLE 1: Reported national caseload for state appellate courts, 1984.

Variations in court organization:

All 50 states, the District of Columbia, and Puerto Rico have courts of last resort. Oklahoma and Texas have two courts of last resort, one that hears civil cases and one that hears criminal cases.

Thirty-two states have intermediate appellate courts; four of these states have two intermediate appellate courts.

Variations in subject matter jurisdiction:

Courts of last resort in states with intermediate appellate courts generally have wide discretion in setting their agenda. Most appeals are heard as a matter of right by intermediate appellate courts and by courts of last resort in states without intermediate appellate courts. (In 1984, the courts of last resort in Virginia and West Virginia are exceptions.)

Total case figures are not comparable from state to state without considering the mix of mandatory and discretionary appeals heard by each court, and the variety of case types included in the jurisdiction of each court.

Sources of data are found in Appendix B.

Reported cases:

The number of cases/petitions filed and disposed are reported separately for courts of last resort, and for intermediate appellate courts. Additionally, these cases are identified separately as mandatory jurisdiction and discretionary jurisdiction cases/petitions.

There are generally three sub-categories within the mandatory, and discretionary jurisdiction categories: (1) the number of reported complete and comparable cases; (2) the number of reported complete cases that include some other case type(s); and (3) the number of reported cases that are either incomplete, or are

incomplete and include some other case types. These figures are identified separately for mandatory and discretionary cases/petitions, and also aggregated on page 2 of this table in the summary section for all appellate courts.

Number of cases/petitions per judge/justice:

This measure is used to indicate the number of cases/petitions filed and disposed for each appellate judge/justice reporting cases/petitions for the appropriate category. The number of judges/justices for each court can be found in Tables 3-5.

Percent of population represented by data:

State population figures used for all appellate courts and courts of last resort are from the revised 1984 Bureau of Census figures. The denominator for these figures varied depending on the category being reported. For example, the population for the mandatory jurisdiction states varied significantly from the discretionary jurisdiction states.

The number of cases per lawyer support personnel:

This measure is used to indicate the number of cases/petitions filed and disposed for each lawyer/support personnel in courts reporting cases/petitions for the appropriate category. The number of lawyer support personnel for each court can be found in Tables 3-5.

Limitations on use:

These represent aggregate data, and due to the controls already exercised on this table, are reported without regard to units of count. The total summary section figures include some double counting of petitions granted review, and later refiled as mandatory cases.

TABLE 1: Reported national caseload for state appellate courts, 1984.

Reported Caseload	Filed	Disposed
Courts of last resort:		
I. Mandatory jurisdiction cases:		
A. Number of reported complete and comparable cases	13,139	9,666
1. Number of cases per judge/justice	76	86
2. Number of cases per lawyer support personnel	33	38
3. Number of courts reporting complete and comparable data	27	16
4. Number of courts with mandatory jurisdiction	50*	50*
5. Percent of the total population of states with mandatory jurisdiction represented by complete and comparable data	60%	50%
B. Number of reported complete cases that include some discretionary cases	6,121	4,668
1. Number of cases per judge/justice	89	90
2. Number of cases per lawyer support personnel	41	51
3. Number of courts reporting complete data with some discretionary cases	11	8
4. Number of courts with mandatory jurisdiction	52	52
5. Percent of the total population of states with mandatory jurisdiction represented by complete data that include some discretionary cases	11%	6%
C. Number of reported cases that are either incomplete, or incomplete and include some discretionary cases	1,033	1,229
1. Number of cases per judge/justice	37	44
2. Number of cases per lawyer support personnel	11	20
3. Number of courts reporting incomplete data with some discretionary cases ..	4	4
4. Number of courts with mandatory jurisdiction	52	52
5. Percent of the total population of states with mandatory jurisdiction represented by incomplete data that include some discretionary cases	15%	5%
II. Discretionary jurisdiction petitions:		
A. Number of reported complete and comparable petitions	27,200	15,608
1. Number of petitions per judge/justice	131	127
2. Number of petitions per lawyer support personnel	53	53
3. Number of courts reporting complete and comparable petitions	30	18
4. Number of courts with discretionary jurisdiction	49**	49**
5. Percent of the total population of states with discretionary jurisdiction represented by complete and comparable data	66%	42%
B. Number of reported complete petitions that include some mandatory cases	3,732	4,264
1. Number of petitions per judge/justice	311	224
2. Number of petitions per lawyer support personnel	75	69
3. Number of courts reporting complete data with some mandatory cases	2	3
4. Number of courts with discretionary jurisdiction	50	50
5. Percent of the total population of states with discretionary jurisdiction represented by complete data that include some mandatory cases	6%	7%
C. Number of reported petitions that are either incomplete, or incomplete include some mandatory cases	4,752	3,352
1. Number of petitions per judge/justice	170	120
2. Number of petitions per lawyer support personnel	65	55
3. Number of courts reporting incomplete data with some mandatory cases	4	4
4. Number of courts with discretionary jurisdiction	50	50
5. Percent of the total population of states with discretionary jurisdiction represented by incomplete data that include some mandatory cases	7%	8%

Table 1: Reported national caseload for state appellate courts, 1984. (continued)

Reported Caseload	Filed	Disposed	
Intermediate appellate courts:			
I. Mandatory jurisdiction cases:			
A. Number of reported complete and comparable cases	74,035	50,165	
1. Number of cases per judge/justice	160	150	
2. Number of cases per lawyer support personnel	81	89	
3. Number of courts reporting complete and comparable data	24	18	
4. Number of courts with mandatory jurisdiction	38	38	
5. Percent of the total population of states with mandatory jurisdiction represented by complete and comparable data	65%	40%	
B. Number of reported complete cases that include some discretionary cases	32,201	26,164	
1. Number of cases per judge/justice	177	211	
2. Number of cases per lawyer support personnel	62	72	
3. Number of courts reporting complete data with some discretionary cases	11	9	
4. Number of courts with mandatory jurisdiction	38	38	
5. Percent of the total population of states with mandatory jurisdiction represented by complete data that include some discretionary cases	33%	28%	
C. Number of reported cases that are either incomplete, or incomplete and include some discretionary cases	0	0	
II. Discretionary jurisdiction petitions:			
A. Number of reported complete and comparable petitions	12,785	2,986	
1. Number of petitions per judge/justice	41	20	
2. Number of petitions per lawyer support personnel	17	10	
3. Number of courts reporting complete and comparable petitions	16	10	
4. Number of courts with discretionary jurisdiction	26	26	
5. Percent of the total population of states with discretionary jurisdiction represented by complete and comparable data	66%	31%	
B. Number of reported complete petitions that include some mandatory cases	0	0	
C. Number of reported petitions that are either incomplete, or incomplete and include some mandatory cases	0	0	
Summary section for all appellate courts:			
	<u>Reported filings</u>		
	<u>COLR</u>	<u>IAC</u>	<u>Total</u>
A. Number of reported complete and comparable cases/petitions	40,339	86,820	127,159
B. Number of reported complete cases/petitions that include other case types	9,853	32,201	42,054
C. Number of reported cases/petitions that are either incomplete, or incomplete and include other case types	5,785	0	5,785
Total	55,977	119,021	174,998

* Data for courts of last resort that reported complete and comparable mandatory jurisdiction cases do not include data from two courts who have virtually no mandatory jurisdiction: the Michigan Supreme Court reported only five filings, and the Texas Supreme Court reported no filings.

** Data for courts of last resort that reported complete and comparable discretionary petitions do not include data from the Mississippi Supreme Court which reported only two filings.

COLR = Court of last resort
IAC = Intermediate appellate court

TABLE 2: Reported total caseload for all state appellate courts, 1984.

Sources of data are found in Appendix B.

Variations in court organization and subject matter jurisdiction:

The specific subject-matter jurisdiction of each court can be found in the court system charts located in Part III of this Report (e.g., civil, non-capital, criminal, etc.). This subject matter jurisdiction varies among courts within states, and among states.

Courts also vary regarding the amount of mandatory and discretionary jurisdiction. Some courts have total mandatory jurisdiction, some have total discretion in setting their agenda, but most courts have some mix between mandatory and discretionary jurisdiction.

This table identifies the total cases/positions filed and disposed in all of the state appellate courts. These numbers are broken down into total mandatory cases, total discretionary petitions, and total discretionary petitions granted review.

States are organized in this table into one of three categories: states with one court of last resort and one intermediate appellate court; states with no intermediate appellate court; and states with multiple appellate courts at any level. This typology provides one scheme for comparing state totals, and courts sharing at least one major organization characteristic.

Variations in counting appellate court cases:

The point in the process at which an appellate court case is counted varies among the states. In some states it is counted at the filing of the complete trial court record, other courts count cases at the filing of the notice of appeal, and still other courts count cases at transfer from another appellate court. These variations in counting cases are identified on the right-side face sheet of this table (which also provides statistics for total cases/petitions disposed). This is an important variable to consider when comparing caseloads. For example, courts that count early in the

process (at notice of appeal) should have a higher caseload per capita than courts that count cases later in the process (at completion of record).

Appropriate analysis:

Sum of mandatory cases and discretionary petitions. It has never been an easy task to define an appellate case. Some argue that only those cases given plenary review should be counted. Others contend that discretionary petitions are also important because they consume court resources and judge time. This first measure provides a total figure for those supporting the latter position.

In addition to providing the sum of mandatory cases and discretionary petitions, the number of these cases/petitions filed per judge is also provided as a comparable statistic to indicate the workload of the court.

Sum of mandatory cases and discretionary petitions granted review. For those that argue only cases given full consideration of the court should be counted, there is a total column which sums mandatory cases with discretionary petitions granted review. This column also indicates the number of cases filed per judge.

Limitations on use:

Comparisons should only be made among those courts that share similar units of count. Additionally, care should be taken to compare only those courts with similar subject matter, and mandatory/discretionary jurisdiction. When comparing states, states are only comparable within the major categories by which the states are organized (e.g., states with one court of last resort and one intermediate appellate court represent one such category). Finally, some trial courts of general jurisdiction have incidental appellate jurisdiction, which may affect the number of appeals filed in the regular appellate courts. This information can be found in Figure H.

Note: All available data that are at least 90% complete are included in the table. Blank spaces indicate that either the data are unavailable or less than 90% complete or that the calculations are inappropriate.

COLR = Court of last resort
 IAC = Intermediate appellate court
 NH = This case type is not handled in this court.
 -- = Inapplicable

Points at which cases are counted:
 1 = At the notice of appeal
 2 = At the filing of record
 3 = Other
 4 = At transfer
 5 = At the filing of briefs
 6 = At docketing
 7 = Receipt of transcript
 8 = At filing of petition
 9 = Varies

ⁱData are incomplete:
 Arizona--Supreme Court--Data do not include mandatory judge disciplinary cases.
 Arkansas--Supreme Court--Data do not include mandatory attorney disciplinary cases, and certified questions from the federal courts.
 California--Supreme Court--Data do not include mandatory judge disciplinary cases. Discretionary petitions granted review do not include discretionary original proceedings initially heard in the Supreme Court.

Louisiana--Supreme Court--Some discretionary jurisdiction cases cannot be separated from the mandatory caseload.
 Maine--Data do not include mandatory disciplinary and advisory opinion cases.
 Missouri--Supreme Court--Data do not include a few discretionary original proceedings.
 New Hampshire--Supreme Court--Data do not include discretionary judge disciplinary cases.
 New Jersey--Supreme Court--Data do not include discretionary interlocutory decisions.
 Washington--Supreme Court--Data do not include mandatory certified questions from the federal courts.

^JExplanation of data included in the category:
 Arizona--Supreme Court--Data include mandatory judge disciplinary cases.
 Arkansas--Supreme Court--Data include a few discretionary petitions that were granted review.
 Connecticut--Appellate Court--Data include a few discretionary petitions that were granted review.
 Delaware--Supreme Court--Data include some discretionary petitions that were granted review.
 District of Columbia--Court of Appeals--Data include discretionary petitions that were granted review, and refiled as appeals.
 Georgia--All courts--Data include discretionary petitions that were granted review and refiled as appeals.

Hawaii--Supreme Court--Data include a small number of discretionary petitions that were granted review.

Idaho--Supreme Court--Data include discretionary petitions that were granted review.

Illinois--Appellate Court--Data include all discretionary petitions.

Indiana--Court of Appeals--Data include discretionary interlocutory decision petitions.

Iowa--Supreme Court--Data include some discretionary cases that were dismissed by the Court.

Kansas--Court of Appeals--Data include a few discretionary cases that were granted review.

Louisiana--Supreme Court--Data include a few discretionary cases.--Courts of Appeal--Data include refiled discretionary petitions that are granted review.

Maryland--Supreme Court--Data include discretionary petitions that were granted review.

Massachusetts--Appeals Court--Data include a small number of discretionary interlocutory decision petitions.

Missouri--Supreme Court--Data include discretionary petitions that were granted review.

Nebraska--Supreme Court--Data include a few discretionary petitions.

New Jersey--Appellate Division of Superior Court--Data include discretionary interlocutory decisions that were granted review.

North Carolina--Court of Appeals--Data include a small number of discretionary petitions that were granted review.

Oregon--Supreme Court--Data include discretionary petitions that were granted review.

Pennsylvania--Supreme Court--Data include some motions that could not be separated from caseload.--Superior Court--Data include discretionary petitions that were granted review.

South Dakota--Data include discretionary advisory opinions.

Tennessee--Court of Criminal Appeals--Data include discretionary interlocutory decision cases that were granted review.

Vermont--Data include discretionary petitions granted review.

Washington--Supreme Court--Data include some discretionary petitions.

Wisconsin--Supreme Court--Data include all disposed mandatory jurisdiction cases.

TABLE 3: Selected caseload and processing measures for mandatory cases in state appellate courts, 1984.

TABLE 4: Selected caseload and processing measures for discretionary petitions in state appellate courts, 1984.

TABLE 5: Selected caseload and processing measures for discretionary petitions granted review in state appellate courts, 1984.

Sources of data are found in Appendix B.

Variations in court organization and subject matter jurisdiction.

The subject matter jurisdiction of each court is outlined briefly in the court system charts located in Part III of this Report, (e.g., civil and criminal cases). This subject matter jurisdiction varies among courts within states, and among states.

Courts also vary regarding the amount of mandatory and discretionary jurisdiction. This information can also be located in Part III of this Report. The processing measures for these tables are identified by table depending on whether they represent mandatory cases (i.e., Table 3), discretionary petitions (i.e., Table 4), or discretionary petitions granted review (i.e., Table 5).

States are organized in this table into one of three categories: states with one court of last resort and one intermediate appellate court; states with no intermediate appellate court; and states with multiple appellate courts at any level. This typology provides one scheme for comparing states totals, and courts sharing at least one major organization characteristic.

Variations in counting appellate court cases:

The point in the process at which an appellate court case is counted varies among the states. In some states it is counted at the filing of the notice of appeal, while other states count it later in the process (e.g., at completion of the trial court record). These variations are identified in Table 2. This is an important variable to consider when comparing caseloads. For example, courts that count early in the process (at notice of appeal) should report a higher caseload per capita than courts that count cases later in the process (at completion of record).

Appropriate analysis:

All percentage calculations that are less than 1% and greater than .5% have been rounded up to 1%. All percentage calculations that are less than .5% and greater than 0% are displayed as 1%.

Disposed cases as a percent of filed. This measure represents the percent of filed cases disposed by the court. The number is computed by

dividing the number of disposed cases by the number of filings, and then multiplying by 100. A percentage over 100 indicates that the court disposed more cases than were filed, thus reducing pending caseload. A figure significantly less than 100 indicates that cases are not keeping up with the volume of cases being filed.

Filed per judge. If subject matter jurisdiction, mandatory/discretionary jurisdiction, use of law clerks, and use of panels in the court (among other factors) are held constant, then this measure permits comparison of caseloads per judge. This figure is computed by dividing the number of filings, by the number of authorized appellate judges/justices serving that court.

Filed per lawyer support personnel. This is a similar measure to the number of filings per judge, in that it is only meaningful across similar jurisdictions. This figure also complements the number of filings per judge by providing a measure for consideration of lawyer support assistance in computing actual court workload. It too is computed by dividing the number of filings, by the number of lawyer support personnel serving that court.

Filed per 100,000 population. The unit of state population used on all court caseload charts is 100,000. This measure compensates for variations in state population and gives a more realistic basis for comparison of caseloads among states of various sizes. If all other factors (e.g., jurisdiction, unit of count, etc.) are similar, the filed per 100,000 figure permits direct comparisons among states of the number of filed cases.

Limitations on use:

Comparisons should only be made among those courts that share similar units of count, jurisdictions, and structures. When comparing states, states are only comparable within the major categories by which states are organized (e.g., states with one court of last resort and one intermediate appellate court represent one such category).

Finally, some trial courts of general jurisdiction have incidental appellate jurisdiction, which may affect the number of appeals filed in the regular appellate courts. This information can be identified in Figure H.

Note: All available data that are at least 90% complete are included in the table. Blank spaces indicate that either the data are unavailable or less than 90% complete, or that the calculations are inappropriate. States and/or courts omitted from this table did not specifically report caseload data on mandatory cases, or did not have mandatory jurisdiction. State courts with mandatory jurisdiction can be identified in the state court system charts identified in Part III of this Report.

ⁱData are incomplete:

- Arizona--Supreme Court--Data do not include judge disciplinary cases.
- Arkansas--Supreme Court--Data do not include mandatory attorney disciplinary cases, and certified questions from the federal courts.
- California--Supreme Court--Data do not include judge disciplinary cases.
- Maine--Supreme Judicial Court Sitting as Law Court--Data do not include mandatory disciplinary and advisory opinion cases.
- Washington--Supreme Court--Data do not include mandatory certified questions from the federal courts.

^jExplanation of data included in the category:

- Arkansas--Supreme Court--Data include a few discretionary petitions that were granted review.
- Connecticut--Appellate Court--Data include a few discretionary petitions that were granted review.

Delaware--Supreme Court--Data include some discretionary interlocutory decisions that were granted review.

District of Columbia--Data include discretionary cases that were granted review, and refiled as appeals.

Georgia--Supreme Court--Data include discretionary petitions that were granted review, and refiled as appeals.
--Court of Appeals--Data include discretionary petitions that were granted review.

Hawaii--Supreme Court--Data include a small number of discretionary petitions that were granted review.

Idaho--Supreme Court--Data include discretionary petitions that were granted review.

Illinois--Appellate Court--Data include all discretionary petitions.

Indiana--Court of Appeals--Data include discretionary interlocutory decision petitions.

Iowa--Supreme Court--Data include some discretionary cases that were dismissed by the Court.

Kansas--Court of Appeals--Data include a few discretionary cases that were granted review.

Louisiana--Supreme Court--Data include a few discretionary cases.

--Courts of Appeal--Data include refiled discretionary petitions that are granted review.

Maryland--Supreme Court--Data include discretionary petitions that were granted review.

TABLE 3: Selected caseload and processing measures for mandatory cases in state appellate courts, 1984.
(continued)

Massachusetts--Appeals Court--Data include a small number of discretionary interlocutory decision petitions.
Missouri--Supreme Court--Data include discretionary petitions that were granted review.
Nebraska--Data include a few discretionary petitions.
New Jersey--Supreme Court--Data include discretionary interlocutory decisions that were granted review.
North Carolina--Court of Appeals--Data include a small number of discretionary petitions that were granted review.

Oregon--Supreme Court--Data include discretionary petitions that were granted review.
Pennsylvania--Superior Court--Data include discretionary petitions that were granted review.
South Dakota--Supreme Court--Data include discretionary advisory opinions.
Tennessee--Court of Criminal Appeals--Data include discretionary interlocutory decision cases that were granted review.
Vermont--Supreme Court--Data include discretionary petitions granted review.
Washington--Supreme Court--Data include some discretionary petitions.

TABLE 5: Selected caseload and processing measures for discretionary petitions granted review in state appellate courts, 1984. (continued)

Note: All available data that are at least 90% complete are included in the table. Blank spaces indicate that either the data are unavailable or less than 90% complete, or that the calculations are inappropriate. States and/or courts omitted from this table did not specifically report caseload data on discretionary petitions granted review, or did not have discretionary jurisdiction. State courts with discretionary jurisdiction can be identified in the state court system charts identified in Part III of this Report.

†Data are incomplete:

California--Supreme Court--Data do not include original proceedings initially heard in the Supreme Court.

Louisiana--Supreme Court--Some discretionary cases granted review could not be separated from the mandatory jurisdiction caseload.

New Hampshire--Data do not include judge disciplinary cases.

Washington--Supreme Court--Data do not include some cases reported with mandatory jurisdiction cases.

‡Explanation of data included in the category:

Arizona--Supreme Court--Data include mandatory judge disciplinary cases.

North Carolina--Court of Appeals--Data include some situations where relief, not review, were granted.

Washington--Supreme Court--Data include mandatory certified questions from the federal courts.

Wisconsin--Supreme Court--Data include all mandatory jurisdiction cases that were disposed.

TABLE 6: Opinions reported by state appellate courts, 1984.

Variations in court organization:

Appellate courts in this table have been separated into courts in states without intermediate appellate courts, courts in states with intermediate appellate courts, and courts in states with multiple appellate courts at any level. This breakdown illustrates how the number of cases disposed of by opinion may vary by appellate court organization.

Variations in subject matter jurisdiction:

The types of appellate cases and their complexity vary from state to state, and from appellate court to appellate court within a state. Variation in subject-matter jurisdiction may be partially explained by court organization, e.g., the presence of an intermediate appellate court, or the existence of a specialized appellate court. The number of, and time consumed by, original jurisdiction cases is also affected by several variables, including whether state statutes require that collateral attacks on criminal convictions be filed originally in the trial court or in the appellate court.

Sources of data:

These are found in Appendix B.

Variations in case classification and definitions:

A case was classified as disposed of by opinion if it was so classified by the state annual report, e.g., a listing of "per curiam" would only be classified as an opinion if it was listed as "per curiam opinion." These data do not include dissenting and concurring opinions. The contents of a court's opinion count are identified in this table in the columns labeled: "Opinion count is by case or written document;" and "Does the opinion count include majority opinions, per curiam opinions, and memos/orders."

Appropriate analyses:

Number of cases disposed of by opinion as percent of dispositions. This summary statistic may indicate the importance attributed by a specific court to opinion-writing as a manner of disposition. A figure of 68% can be interpreted to mean that 68% of that court's dispositions were resolved by an opinion. Although a lower

figure in another court may indicate that court's preference to resolve disputes without opinion, the lower figure may result from a variety of other factors, such as: a higher caseload than the first court; fewer resources that can be devoted to opinion-writing than the first court; or a different set of cases that do not require elaborate explanations of decisions through opinion-writing. In short, this may be more of a workload measure than one which identifies opinion-writing as a method of announcing decisions.

Number of cases disposed of by opinion per judge, and per judge plus lawyer support personnel. This summary statistic can be used as but one component of a general workload measure. A figure of 44 can be interpreted to mean that given that court's definition of an opinion, 44 cases were disposed of by an opinion for each authorized judge and/or lawyer support personnel assigned to that court.

Limitations on use:

Differences between courts can limit the value of the figures reported in this table. The use of different terminology by different courts to mean the same thing further complicates analysis. A per curiam opinion in one court may be the functional equivalent of a full opinion in another court, or a memorandum opinion in yet another court. An effort has been made to limit the reporting of opinions in this table to full-length opinions, signed or unsigned, but some less than full-length opinions are probably included in these data.

Beyond the problem of distinguishing among types of opinions, full opinions may be of different lengths. Also, courts make varied use of commissioners, law clerks, and other legal staff. Some courts may use staff to draft opinions, while others do not. These figures may also vary depending on appellate court structure and the amount of discretionary jurisdiction. For these reasons, figures such as the number of cases disposed of by opinion per judge, and the number of opinions written per judge are less than perfect indicators of the level of work done by judges in these courts, and they are by no means an all-encompassing measure of a judge's workload. Behaviors other than opinion-writing are important components of a judge's daily activities.

^dThis figure includes discretionary petitions that are granted review and counted once as petitions, and then refiled as mandatory cases and counted again.

^PThis figure includes discretionary petitions that are granted and denied review.

ⁱData are incomplete:
 Arkansas--Supreme Court--Data do not include disciplinary and advisory opinion cases.
 Kansas--Supreme Court--Data do not include discretionary cases.
 Maine--Supreme Judicial Court Sitting as Law Court--Data do not include mandatory disciplinary and mandatory advisory opinion cases.
 New Hampshire--Supreme Court--Data do not include judge disciplinary cases.

^JExplanation of data included in the category: North Dakota--Supreme Court--Data include preargument dispositions.

^kAdditional information:
 Alabama--Court of Criminal Appeals--The computed figure does not include 92 opinions written by retired and other active judges.
 California--Courts of Appeal--The number of judges are FTEs, because the number of opinions written by authorized judges could not be identified separately.
 Colorado--Court of Appeals--This figure does not include 461 unpublished opinions.
 District of Columbia--Court of Appeals--The opinion count does not include 485 memo opinions and judgments.

Kentucky--Supreme Court--Data include 117 published and 222 unpublished opinions.

Mississippi--Supreme Court--Data include 55 unpublished opinions on the merits.

New Jersey--Appellate Division of Superior Court--Number of judges include two supplemental judges whose opinions could not be separated from the opinions of authorized judges.

Pennsylvania--Supreme Court--It is not clear whether this number is an opinion or case count.

--Superior Court--The number of judges includes 7 supplemental judges because the number of opinions written by the authorized judges could not be identified separately.

--Commonwealth Court--The number of judges includes 3 supplemental judges because the number of opinions written by the authorized judges could not be identified separately.

South Carolina--Supreme Court--Data include 244 unpublished opinions.

--Court of Appeals--Data include 44 unpublished full opinions.

Virginia--Supreme Court--The number of judges includes 2.5 supplemental judges because the number of opinions written by the authorized judges could not be identified separately.

TABLE 7: Time interval (days) data for state appellate courts, 1984.

Variations in court organization:

Appellate courts in this table have been separated into courts of last resort and intermediate appellate courts.

Sources of data:

The sources of data for individual appellate courts can be found in Appendix B.

Variations in counting cases:

Some courts count cases as soon as the notice of appeal is filed while others count them at a later event, such as at the filing of the record or the filing of the appellant's record. The latter method will exclude those cases that are withdrawn before the counting point from total dispositions. Figure C displays the various methods of counting cases among all the state appellate courts.

Appropriate analyses:

Comparison can be made of time to disposition for specific case types in courts at the same level that use the same event for the start of the time interval. Unfortunately, there is so little repetition of similar case types that there are few caseloads to compare. "Total cases" is the most common category, but represents only an average of all case types in a particular court.

The time intervals used on this table are designed to divide the entire time a case is

pending into the portion of time it is under the control of the court and the portion for which lawyers are responsible. Comparisons can be made of the portion of the entire time the case is pending in a particular status with similar cases pending in another court of the same type. Where case types are available, comparisons can also be made of the length of time taken by different types of cases in the same court.

Limitations on use:

Courts are grouped on this table by type of court (court of last resort or intermediate appellate court), and by the events used to define the start and end of each interval. Comparisons should be restricted to similar types of cases in courts that use the same events for the start and end of the interval of interest.

Although an attempt has been made to divide the entire time a case is pending into the portion over which the lawyers have control and the portion the court has control, they are not the only factors that affect the pace of litigation. The lawyer may have to wait for the court reporter to prepare the necessary transcripts. The court may have to wait for another court to make a decision on a different aspect of the case. This table indicates the average pace of litigation for large groups of not necessarily homogeneous cases. A detailed study of the pace of litigation should be supported by data of far greater detail than are available here.

TABLE 7: Time interval (days) data for state appellate courts, 1984.

State and court title	Type of case	Beginning event	Beginning event to briefs filed	Beginning event to argument or submission	Argument or submission to decision announced	Beginning event to decision announced	Type of statistic
COURTS OF LAST RESORT

Note: Times are often given in months, fractions of months, or months and days. For comparability, months were converted to days by using 30.4 days per month.

All available data are entered in the table. Blank spaces indicate that the data are not available.

ⁱTime interval data for Arkansas are for a sample of cases.

For the time the briefs are filed, the following events were used:
 Readiness--Iowa Supreme Court.
 Date perfected--Washington Supreme Court, and Washington Court of Appeals.
 Docketing--Maryland Court of Appeals, Maryland Court of Special Appeals.
 At issue--New Mexico Supreme Court.

At issue--Idaho Supreme Court, Oregon Supreme Court, Oregon Court of Appeals.

For the time decision announced, the following events were used:
 Opinion publication--Alaska Supreme Court and Alaska Court of Appeals
 Final decision--Oregon Supreme Court and Oregon Court of Appeals
 Final closure--Idaho Supreme Court

KEY:

FOA = filing of appeal
 NOA = notice of appeal
 FOR = filing of record
 SUB = ready for submission

Trial court summary statistics

This section contains tables that display the 1984 statistical data from the trial courts. The data can be found in published annual reports, as well as unpublished documents provided by state court administrators and appellate court clerks. All available documents from the 50 states, the District of Columbia, Guam, and Puerto Rico are used when appropriate and essentially complete.

Court systems that contributed to the first Annual Report (1975) have provided more data as state court administrators have become aware of the CSIM Project data needs. Several states that did not submit data for the 1975 report have since changed or improved their data systems to the extent that they now provide data for this series.

Trial court data received from states are generally more detailed than appellate court data. Although the 1984 State Trial Court Jurisdiction Guide for Statistical Reporting enabled staff to make quantum leaps forward in identifying units of count and the subject matter jurisdiction of trial courts, some specific problems make comparisons of the data presented in this Report difficult. Among the problems are (1) the lack of uniform case classifications; (2) lack of uniform ways of counting cases; (3) the lack of complete data reported by the courts; (4) questions relating to the validity of data collected, both published and unpublished; and (5) variations in the subject matter jurisdiction of the courts.

The first problem in comparing data from trial courts is the lack of uniformity in case classification. Case categories and the data classified in the case categories vary from state to state. For example, DWI cases may be counted with criminal cases in one state, and with traffic cases in another state. This sort of classification problem, however, has been addressed in the 1984 State Trial Court Jurisdiction Guide for Statistical Reporting.

The second problem deals with the units of count employed to measure cases. This problem has already been explained in the introduction to this volume, and is examined in greater detail in Figures E and G.

The third problem in comparing data from trial courts is the lack of complete statistics. Some states report only total caseload. Others report individual case categories, but do not describe the contents of those categories. For example, a state may report total civil and

criminal data but not identify whether they include estate, domestic relations or mental health. This omission presents a problem in interstate comparisons. In addition, there are states that are not consistent in their reporting of data. The general jurisdiction court, for example, may give detailed category breakdowns, whereas the limited jurisdiction court may report only total civil, criminal, and juvenile cases, or not report at all.

The fourth problem relates to questions of validity of the data collected, both published and unpublished. One of the major factors in data validity is the chance of human error. Many elements (hidden data, transposition of figures, double counting of cases, manner used to verify data) contribute to the scope of this problem. Although many verification techniques have been implemented by state court administrators and by the Court Statistics and Information Management Project staff to keep errors to a minimum, the reader should understand that a verification process does not guarantee absolute accuracy.

The final problem is variation in the subject matter jurisdiction of the courts. In 1984, six states, Illinois, Idaho, Iowa, Massachusetts, Missouri, and South Dakota, the District of Columbia and Guam handled all cases in general jurisdiction courts. In other states, such as Florida and New Jersey, general jurisdiction courts process only major criminal cases and major civil actions, while other civil and criminal cases are handled by limited jurisdiction courts. The 1984 state court system charts in Part III show that the number and types of trial courts vary from state to state. This difference in court structure must be kept in mind while examining the data in these summary tables.

The reader should note that only states reporting data that could be displayed in specific case category tables (i.e., felony, real property rights, status offenses, etc.) are included in such tables. For the sake of clarity states that have jurisdiction over specific case types, but which failed to report data were excluded from these tables.

The following tables are sequenced from a general overview (national caseload totals for all courts) to the more specific caseload detail (civil, criminal, traffic/other violation, and juvenile case categories and caseload).

TABLE 8: Reported national civil and criminal caseload for state trial courts, 1984.

Reported cases:

The number of cases filed and disposed are reported separately for courts of general, and limited jurisdictions. Additionally, these cases are identified separately as civil and criminal.

There are generally three sub-categories: (1) the number of reported complete and comparable cases; (2) the number of reported complete cases that include some other case type(s); and (3) the number of reported cases that are either incomplete, or are incomplete and include some other case types. These figures are identified separately for civil and criminal cases and also aggregated on page 2 of this table in the summary section for all trial courts.

Percent of population represented by data:

State population figures used for all trial courts are from the revised 1984 Bureau of Census figures. The denominator for these figures varied depending on the category being reported. For example, the population for the general jurisdiction courts varied significantly from the

limited jurisdiction courts because several states do not have limited jurisdiction courts. This percentage represents the percent of the total population of states reporting complete data for either its general jurisdiction courts or all of its limited jurisdiction courts. For example, a state which has two limited jurisdiction courts, but complete data from only one of them, would not be counted in section 11.A.3. of this table, but the reported cases from the one court would be counted in section 11.A of this table.

Limitations on use:

These represent aggregate data, and due to the controls already exercised on this table, are reported without regard to units of count. This problem is especially troublesome for the criminal case count. Additionally, the total civil and criminal figures are incomplete, and may include some juvenile and traffic figures. These figures are not total estimates, and are not comparable to estimates reported in previous editions of this Report.

TABLE 8: Reported national civil and criminal caseload for state trial courts, 1984.

Reported Caseload	Filed	Disposed
Civil cases:		
I. General jurisdiction courts:		
A. Number of reported complete and comparable cases	2,959,662	1,911,491
1. Number of courts reporting complete and comparable data	26	23
2. Number of states with general jurisdiction civil courts	52	52
3. Percent of the total population of states with general jurisdiction courts represented by complete and comparable civil data	39%	31%
B. Number of reported complete civil cases that include other case types	2,545,167*	2,072,091*
1. Number of courts reporting complete civil cases that include other case types	18	11
2. Number of states with general jurisdiction civil courts	52	52
3. Percent of the total population of states with general jurisdiction courts represented by complete civil data that include some other case types	31%	25%
C. Number of reported cases that are either incomplete, or incomplete and include non-civil case types	1,750,700	1,869,557
1. Number of courts reporting either incomplete civil data or incomplete civil data that include non-civil case types	11	15
2. Number of states with general jurisdiction civil courts	52	52
3. Percent of the total population of states with general jurisdiction courts represented by either incomplete civil data, or incomplete civil data that include non-civil case types	27%	30%
II. Limited jurisdiction courts:		
A. Number of reported complete and comparable cases	4,371,812	2,951,326
1. Number of state courts reporting complete and comparable data	46	35
2. Number of states with limited jurisdiction civil courts	42	42
3. Percent of the total population of states with limited jurisdiction courts represented by complete and comparable civil data	42%	27%
B. Number of reported complete civil cases that include other case types	900,057	684,862
1. Number of courts reporting complete civil cases that include other case types	4	3
2. Number of states with limited jurisdiction civil courts	42	42
3. Percent of the total population of states with limited jurisdiction courts represented by complete civil data that include some other case types	3%	3%
C. Number of reported cases that are either incomplete, or incomplete and include non-civil case types	1,052,669	979,935
1. Number of courts reporting either incomplete civil data or incomplete civil data that include non-civil case types	12	10
2. Number of states with limited jurisdiction civil courts	42	42
3. Percent of the total population of states with limited jurisdiction courts represented by either incomplete civil data, or incomplete civil data that include non-civil case types	25%	25%
Criminal cases:		
I. General jurisdiction courts:		
A. Number of reported complete and comparable cases	1,086,979	555,393
1. Number of courts reporting complete and comparable data	20	18
2. Number of states with general jurisdiction criminal courts	52	52
3. Percent of the total population of states with general jurisdiction courts represented by complete and comparable criminal data	48%	42%
B. Number of reported complete criminal cases that include other case types	311,459	296,658
1. Number of courts reporting complete criminal cases that include other case types	11	11
2. Number of states with general jurisdiction criminal courts	52	52
3. Percent of the total population of states with general jurisdiction courts represented by complete criminal data that include some other case types	11%	11%

Total (incomplete)	7,255,529	2,210,433	6,324,538	5,156,786	13,580,067	7,367,219

*Data for Minnesota could not be broken down into general and limited jurisdiction courts, 50 were reported general jurisdiction courts only.

- TABLE 9: Reported grand total state trial court caseload, 1984.**
TABLE 10: Reported total state trial court civil caseload, 1984.
TABLE 11: Reported total state trial court criminal caseload, 1984.
TABLE 12: Reported total state trial court traffic/other violation caseload, 1984.
TABLE 13: Reported total state trial court juvenile caseload, 1984.

Variations in court organization:

Fifty states, the District of Columbia, Guam, and Puerto Rico have 1984 trial court data displayed in Table 9 through Table 13.

A court organization chart for each state is in Part III of this Report. The wide variation in court organization from state to state can be illustrated by comparing the District of Columbia's single-tier court system with Georgia, which has a number of general jurisdiction and/or limited jurisdiction courts. These differences in court organization determine the proportion of total trial court caseload that will be heard in general jurisdiction and in limited jurisdiction courts in each state.

Variations in subject matter jurisdiction:

The variations in court organization mentioned above will also determine what proportion of civil, criminal, traffic/other violation, and juvenile case types are heard at each level of court. These are the only four tables that list every court with the relevant subject matter jurisdiction, regardless of the availability of data. See the individual court system charts in Part III for more detailed descriptions of the case types handled in each trial court.

Variations in case classification and definitions:

Tables 9 through 13 show only the very broad breakdown of caseload into civil, criminal, traffic/other violation, and juvenile cases. These tables give a good overview of the way caseload is distributed among the trial courts. The large number of blank spaces indicates from which courts data are unavailable or less than 90% complete for 1984. No totals appear for a state on the state name line in any of the columns unless complete data (at least 90%) were reported by all courts handling that case type. State totals are left blank if data are missing from any court in the state.

Sources of data are indicated in Appendix B.

Variations in counting civil and criminal cases:

Care should be taken to avoid comparing states with data based on non-comparable units of count. These definitions in criminal cases are spelled out in Figure E. Check the notes at the end of each table to identify those courts that do not count civil cases at the filing of the petition or complaint. Only data from those courts that count cases in the same way can be compared. Unfortunately, the unit of count varies among courts in many states so that state caseloads cannot be compared unless the unit of count for each case type is the same in each court handling that case type.

The importance of controlling for the unit of count when comparing state data was discussed in the introduction to this volume.

Appropriate analyses:

All percentage calculations that were less than 1% but greater than .5% have been rounded up

to 1%. All percentage calculations that were less than .5% but greater than 0% are displayed as <1%.

Disposed cases as percent of filed. This measure represents the percent of filed cases disposed by the court. The percent is computed by dividing the number of cases disposed by the number filed and then multiplying by one hundred. A percent over one hundred indicates that the court disposed more cases than were filed, thus reducing pending caseload. A percent significantly less than one hundred indicates that the court is not keeping up with the volume of cases being filed.

Filed (disposed) per 100,000 population. The unit of state population used on all court caseload charts is 100,000. Filed per 100,000 population compensates for variations in state population and gives a more realistic basis for comparison of caseloads among states of various sizes.

If the number of filings was unavailable but the number of dispositions was available, the number of cases disposed per unit of population was entered in this column in place of the number of cases filed per population unit. The use of this alternative quantity is indicated by enclosing it in parentheses. Population figures represent the total state population.

If all other factors (court jurisdiction, case definition, unit of count, etc.) are similar, the filed per unit of population statistic permits direct comparison among states of the number of filed civil cases, criminal cases, traffic/other violation cases, juvenile cases, as well as among state totals.

Limitations on use:

Data that are less than 90% complete are not included in this table to prevent inappropriate comparisons. Any comparisons among the data that are included must take into account the differences between the way cases are defined and counted in different courts.

These tables serve to indicate the rough dimensions of total caseload across the states, but comparing broad categories like civil, criminal, traffic/other violations, and juvenile is risky because of variations in what individual states include in those categories. Some states, for example, classify all appeals as civil. Many states include ordinance violations in criminal caseload; a few states do not count ordinance violations at all. Some states include juvenile traffic violations in juvenile caseload.

Comparisons among states and courts should be limited to specific case types that are displayed in later tables in this section.

Before making comparisons between limited jurisdiction courts or among general jurisdiction courts, check the court system charts in Part III of this volume for similarities in jurisdiction.

Note: Mississippi is not included in this table because it did not report trial level data for 1984, and did not respond to the Trial Court Jurisdiction Guide; therefore, grand total jurisdictional information is unavailable. All other state courts are listed in this table, regardless of whether data are available. All data that are at least 90% complete are entered in the table. Blank spaces indicate that either data are unavailable or less than 90% complete, or that the calculations are inappropriate. The "filed per 100,000 population" STATE TOTAL figure may not equal the sum of the individual state courts due to rounding.

***Civil Unit of Count:**

These courts count their civil cases "at issue" as opposed to the filing of the petition or complaint.

PARKING CODES:

- NH = Court does not handle parking cases.
- NPA = The court handles parking cases but the data are unavailable.
- P = The data include contested and uncontested parking.
- CP = The data include contested parking only.

Criminal case unit of count codes:

Contents of case (number of defendants/number of charges):

1. Single defendant/single charge
2. Single defendant/single incident
3. Single defendant/single incident (maximum number of charges)
4. Single defendant/one or more incidents
5. Single defendant/varies with prosecutor
6. One or more defendants/single charge
7. One or more defendants/single incident
8. One or more defendants/single incident (maximum number of charges)
9. One or more defendants/one or more incidents
10. One or more defendants/varies with prosecutor
11. Varies with prosecutor/varies with prosecutor

Point at which case is counted:

- A. At the filing of the information or indictment

- B. At the filing of the information or complaint
- C. At the filing of the complaint (warrant or accusation)
- D. At the assigning of a docket number
- E. At the arraignment (first appearance)
- N/A = The data are not available

ⁱData are incomplete:

- Alaska--District Court--Data do not include limited felonies.
- Arizona--Superior Court--Data do not include mental health cases.
- Justice of the Peace Court--Data do not include limited felony, and miscellaneous traffic cases.
- Arkansas--City Court--Data were unavailable for six months from five cities.
- Delaware--Family Court--Data do not include status petitions and child-victim petitions.
- Court of Common Pleas and Municipal Court of Wilmington--Data do not include all limited felonies.
- Florida--County Court--Disposed data do not include reopened cases.
- Georgia--Superior Court--Data do not include ordinance violations and moving traffic cases from Ware County.
- State Court--Data are incomplete for Fulton County and do not include limited felony cases.
- Idaho--Data do not include limited felony cases.
- Illinois--Circuit Court--Data do not include all parking cases.
- Indiana--Superior Court--Total data do not include mental health, criminal appeals, miscellaneous criminal, and "redocketed" or "other" cases
- County Court--Data do not include "other cases" and "reopened proceedings."
- Iowa--Data do not include family in need of assistance, some estate, and all juvenile cases.
- Kentucky--District Court--Data do not include limited felony cases.
- Maine--District Court--Data do not include limited felony cases.

TABLE 9: Reported grand total state trial court caseload, 1984. (continued)

Michigan--Circuit Court--Data are missing from four counties.
 --District Court--Data do not include all limited felonies, and are missing from four cities.

Nebraska--County Court and Municipal Court--Data do not include limited felonies.

New Jersey--State totals do not include data from Surrogate's Court.

New Mexico--Magistrate Court--Data do not include limited felonies.

New York--Supreme Court and County Court--Data do not include civil appeals, criminal appeals, and miscellaneous criminal cases.
 --Civil Court of New York City--Data do not include miscellaneous civil cases.

North Carolina--District Court--Data do not include limited felonies.

North Dakota--District Court--Disposed data do not include juvenile traffic/other violation cases.
 --County Court--Data do not include limited felony cases.

Oklahoma--District Court--Data do not include juvenile data.

Oregon--County Court--Data were unavailable from two counties.
 --District Court--Data do not include limited felonies.

Pennsylvania--Court of Common Pleas--Data do not include mental health and criminal appeals cases.
 --Pittsburgh City Magistrates--Data do not include limited criminal cases.
 --Philadelphia Municipal Court--Data do not include limited felony cases.

Puerto Rico--Superior Court--Data do not include estate cases.

Rhode Island--District Court--Data do not include civil appeals and mental health cases.
 --Family Court--Data do not include paternity/bastardy cases.

South Carolina--Municipal Court--Data do not include limited felony cases.

South Dakota--Data do not include limited felony cases.

Tennessee--Circuit Court and Criminal Court--Data do not include traffic cases.

Utah--District Court--Disposed cases do not include spouse abuse cases.

Washington--Superior Court--Disposed data do not include domestic violence petitions.
 --District Court--Data do not include limited felonies.
 --Municipal Court--Data are unavailable from two courts.

West Virginia--Magistrate Court--Data do not include limited felonies.-

Wyoming--District Court--Data do not include cases from Sublette County for six months.

JExplanation of data included in the category:
 Alabama--Circuit Court--Data include postconviction remedy proceedings.
 --District Court--Data include preliminary hearings.

Alaska--District Court--Data include probation revocation and search warrant cases.

California--Justice Court and Municipal Court--Data include preliminary hearings.

Colorado--District Court--Data include extradition, revocation hearings, and release from commitment hearings.

Connecticut--Superior Court--Data include postconviction remedy proceedings.

Georgia--Superior Court--Data include probation revocation hearings.

Idaho--Data include sentence review only and postconviction remedy proceedings.

Kentucky--Circuit Court--Data include postconviction remedy and sentence review only proceedings.
 --District Court--Data include sentence review only proceedings.

Louisiana--District Court--Data include postconviction remedy proceedings.

Maine--Superior Court--Data include postconviction remedy and sentence review only proceedings.

Nebraska--District Court--Data include postconviction remedy proceedings.

New Mexico--District Court--Data include postconviction remedy proceedings.

North Dakota--District Court--Data include sentence review only and postconviction remedy proceedings.

Ohio--Court of Common Pleas--Data include postconviction remedy proceedings.

Rhode Island--Superior Court--Data include postconviction remedy proceedings.
 --District Court--Data include preliminary hearings.

South Carolina--Circuit Court--Data include postconviction remedy proceedings.

Tennessee--Circuit Court and Criminal Court--Data include postconviction remedy proceedings.

Utah--District Court--Data include postconviction remedy proceedings and sentence review only cases.
 --Circuit Court--Data include postconviction remedy proceedings.

Washington--Superior Court--Data include postconviction remedy proceedings.

West Virginia--Circuit Court--Data include postconviction remedy proceedings.

Wyoming--District Court--Data include postconviction remedy proceedings.

Note: Mississippi is not included in this table because it did not report civil data for 1984, and did not respond to the Trial Court Jurisdiction Guide; therefore, civil jurisdiction information is unavailable. All other state courts with civil jurisdiction are listed in this table, regardless of whether data are available. All data that are at least 90% complete are entered in the table. Blank spaces indicate that either the data are unavailable or less than 90% complete, or that the calculations are inappropriate. The "filed per 100,000 population" STATE TOTAL figure may not equal the sum of the individual state courts due to rounding.

*UNIT OF COUNT:

The following courts count their civil cases "at issue" as opposed to the filing of the petition or complaint--District of Columbia Superior Court, New York Supreme Court and County Court, and the New Jersey Superior Court.

ⁱData are incomplete:

Alaska--Superior Court--Disposed data do not include domestic violence cases.

Arizona--Superior Court--Data do not include mental health filings.

--Justice of the Peace Court--Data do not include miscellaneous civil dispositions.

TABLE 10: Reported total state trial court civil caseload, 1984. (continued)

Arkansas--Municipal Court--Data are missing from several courts.
 --City Court--Data are missing from several courts.
 Guam--Some civil data are included in juvenile data.
 Indiana--Superior Court and Circuit Court--Data do not include mental health filings.
 --County Court--Data do not include mental health or miscellaneous civil cases.
 --City Court and Town Court--Some civil cases would not be separated out of the grand total.
 Iowa--Filings do not include mental health cases, and dispositions do not include a few domestic relations and some estate cases.
 Kentucky--District Court--Data do not include paternity/bastardy cases.
 Michigan--Circuit Court--Data were unavailable from four small counties.
 --District Court--Data were unavailable from four cities.
 Missouri--Data do not include adoption or termination of parental rights cases.
 Nebraska--District Court--Data do not include civil appeals.
 New Jersey--Superior Court--Data do not include adoptions, termination of parental rights, some paternity/bastardy, and some estate cases.
 New York--Supreme Court and County Court--Data do not include civil appeals.
 --Civil Court of New York City--Data do not include miscellaneous civil cases.
 Oregon--Circuit Court--Dispositions do not include adoption or mental health cases.
 --County Court--Data do not include some estate cases.
 Pennsylvania--Court of Common Pleas--Data do not include mental health cases.
 Rhode Island--District Court--Data do not include civil appeals and mental health cases.
 --Family Court--Data do not include paternity/bastardy cases.
 Utah--District Court--Disposed data do not include miscellaneous domestic relations cases.
 Washington--Superior Court--Dispositions do not include domestic violence petitions.
 --District Court--One court did not report data for 1984.
 --Municipal Court--Two courts did not report data for 1984.

Wyoming--District Court--One county reported data for only 6 months.

JExplanation of data included in the category:

Alabama--Circuit Court--Data include some postconviction remedy proceedings.
 Alaska--Superior Court--Data include postconviction remedy proceedings.
 Connecticut--Superior Court--Data include postconviction remedy proceedings.
 Georgia--Superior Court--Data include probation revocation hearings.
 Guam--Data include some traffic and some juvenile cases.
 Hawaii--Circuit Court--Data include some criminal and traffic/other violation cases.
 Illinois--Data include some miscellaneous criminal cases.
 Indiana--Municipal Court of Marion County--Data include miscellaneous criminal cases.
 Kentucky--Circuit Court--Data include postconviction remedy proceedings.
 Louisiana--District Court--Data include postconviction remedy proceedings.
 Minnesota--Data include criminal appeals.
 New Mexico--District Court--Data include postconviction remedy proceedings.
 New York--Supreme Court and County Court--Data include postconviction remedy proceedings.
 North Dakota--County Court--Data include criminal appeals.
 Oregon--Circuit Court--Data include criminal appeals.
 Rhode Island--Superior Court--Data include postconviction remedy proceedings.
 South Carolina--Circuit Court--Data include criminal appeals and postconviction remedy proceedings.
 Tennessee--Circuit Court--Data include miscellaneous criminal cases and postconviction remedy proceedings.
 Texas--District Court--Data include child-victim petitions.
 --County Level Courts--Data include child-victim petitions.
 Utah--District Court--Data include postconviction remedy proceedings.
 Virginia--District Court--Data include criminal cases filed in the Juvenile and Domestic Relations Court.
 Washington--Superior Court--Data include postconviction remedy proceedings.
 Wisconsin--Circuit Court--Data include traffic/other violation appeals.
 Wyoming--District Court--Data include criminal appeals and juvenile cases.

Note: Mississippi is not included in this table because it did not report any criminal data in 1984, and did not respond to questions in the Trial Court Jurisdiction Guide for Statistical Reporting; therefore, criminal jurisdiction information is unavailable. All other state courts with criminal jurisdiction are listed in this table, regardless of whether data are available. All data that are at least 90% complete are entered in the table. Blank spaces indicate that either the data are unavailable or less than 90% complete, or that the calculations are inappropriate. The "filed per 100,000 population" STATE TOTAL figure may not equal the sum of the individual state courts due to rounding.

N/A = Information is unavailable.
-- = Not applicable.

Criminal case unit of count codes:

- Contents of case (number of defendants/number of charges) - Point at which case is counted
- Contents of case:
1. Single defendant/single charge
 2. Single defendant/single incident
 3. Single defendant/single incident (maximum number of charges)
 4. Single defendant/one or more incidents
 5. Single defendant/varies with prosecutor
 6. One or more defendants/single charge
 7. One or more defendants/single incident
 8. One or more defendants/single incident (maximum number of charges)
 9. One or more defendants/one or more incidents
 10. One or more defendants/varies with prosecutor
 11. Varies with prosecutor/varies with prosecutor

Point at which case is counted:

- A. At the filing of the information or indictment
- B. At the filing of the information or complaint
- C. At the filing of the complaint (warrant or accusation)
- D. At the assigning of a docket number
- E. At the arraignment (first appearance)

ⁱData are incomplete:

- Alaska--Superior Court--Total criminal data do not include criminal appeals.
- Alaska--District Court--Total criminal data do not include limited felonies.
- Arizona--Justices of the Peace--Total criminal data do not include limited felonies.
- Arkansas--Municipal Court--The following courts did not report or reported partially: Alma, Crawfordville, Farmington, Humoke, Mountainburg, Ash Flat, Bryant, Clinton, Crossett, Dermott, De Valls Bluff, Endora, Fordyce, Lake Village, Lake City, Mammoth Spring, Marshall, Osceola, Siloam Springs, Magnolia, Russellville, and Star City. Total criminal data do not include limited felony data for six months.
- City Court--There were no reports or only 6 months of data reported from the cities of Alma, Crawfordville, Farmington, Humoke, and Mountainburg.
- California--Justice Court and Municipal Court--Total Criminal data do not include DWI/DUI cases.
- Colorado--County Court--Total criminal data do not include DWI/DUI cases.

TABLE 11: Reported total state trial court criminal caseload, 1984. (continued)

Connecticut--Superior Court--Total criminal data do not include DWI/DUI cases.
 Delaware--Court of Common Pleas--Total criminal data do not include all limited felonies.
 --Justice of the Peace Court--Total criminal data do not include most DWI/DUI cases.
 Florida--Circuit Court--Criminal disposition data do not include reopened cases.
 Georgia--Superior Court--Criminal data do not include DWI/DUI cases.
 --State Court--Criminal data do not include limited felony and some DWI/DUI cases.
 Hawaii--Circuit Court--Total criminal data do not include reopened prior cases.
 --District Court--Total criminal data do not include some misdemeanor cases included with ordinance violations.
 Idaho--District Court--Total criminal data do not include all limited felonies.
 Indiana--County Court--Total criminal data do not include miscellaneous criminal cases.
 --Municipal Court of Marion County--Total criminal data do not include miscellaneous criminal cases.
 --City Court and Town Court--There were 1,068 filings and 637 dispositions that were not identified by case categories.
 Kentucky--District Court--Total criminal data do not include limited felonies.
 Louisiana--City Court and Paush Court--Total criminal data do not include DWI/DUI cases.
 Maine--Superior Court--Total criminal data do not include DWI/DUI cases and some criminal appeals.
 Massachusetts--Trial Court of the Commonwealth--Total criminal data do not include all DWI/DUI filings.
 Michigan--Circuit Court--No data were available for Hillsdale, Osceola, Kalkaska, and Delta counties.
 Minnesota--District Court--Total criminal data do not include criminal appeals.
 Nebraska--County Court--Total criminal data do not include limited felonies.
 New York--Supreme Court and County Court--Total criminal data do not include criminal appeals filed in the County Court.
 Oregon--Circuit Court--Total criminal data do not include criminal appeals.
 --District Court--Total criminal data do not include limited felonies.
 Pennsylvania--Court of Common Pleas--Total criminal data do not include criminal appeals.
 South Carolina--Circuit Court--Total criminal data do not include criminal appeals.
 --Municipal Court--Total criminal data do not include limited felonies.
 Tennessee--Circuit Court--Total criminal data do not include DWI/DUI cases.
 Texas--County Level Courts--Total criminal disposition data do not include traffic appeals.
 Utah--Circuit Court--Total criminal data do not include all miscellaneous criminal cases.

Virginia--District Court--Total criminal data do not include limited felonies and cases filed in Juvenile and Domestic Relations Court involving adult offenses against juveniles.
 Washington--District Court--One court did not report any data during 1984, and one other did not submit all reports. Total criminal data do not include limited felonies.
 --Municipal Court--Two courts did not report data for 1984.
 West Virginia--Magistrate Court--Total criminal data do not include limited felony cases.
 Wyoming--District Court--Total criminal data do not include criminal appeals.

JExplanation of data included in the category:
 Alabama--District Court--Total criminal data include preliminary hearings.
 Alaska--District Court--Total criminal data include ordinance violations and misdemeanor traffic cases.
 Arkansas--Municipal Court--Total criminal data include ordinance violation cases.
 --City Court--Total criminal data include ordinance violation cases.
 California--Justice Court and Municipal Court--Total criminal data include preliminary hearings bound over, other transfers, and some ordinance violations.
 Colorado--District Court--Total criminal data include extraditions, revocations, parole, and release from commitment hearings.
 Connecticut--Superior Court--Total criminal data include ordinance violations.
 Delaware--Superior Court--Total criminal data include postconviction remedy proceedings.
 --Alderman's Court--Total criminal data include ordinance violations.
 Georgia--Superior Court--Total criminal data include ordinance violations.
 Guam--Superior Court--Total criminal data include traffic and ordinance violation cases.
 Idaho--District Court--Total criminal data include ordinance violations.
 Indiana--County Court--Total criminal data include ordinance violations.
 --Municipal Court of Marion County--Total criminal data include ordinance violations.
 Kentucky--Circuit Court--Total criminal data include postconviction remedy and sentence review only proceedings.
 --District Court--Total criminal data include ordinance violations and sentence review only proceedings.
 Maine--Superior Court--Total criminal data include ordinance violations, postconviction remedy and sentence review only proceedings.
 Massachusetts--Trial Court of the Commonwealth--Total criminal data include ordinance violations from the District Court Department.
 Minnesota--County Courts--Total criminal data include ordinance violations.

TABLE 11: Reported total state trial court criminal caseload, 1984. (continued)

Missouri--Circuit Court--Total criminal data include those ordinance violation cases that request jury trials.
 Nebraska--District Court--Total criminal data include civil appeals and postconviction remedy proceedings.
 --County Court--Total criminal data include ordinance violations.
 New Jersey--Municipal Court--Total criminal data include ordinance violations
 North Carolina--District Court--Total criminal data include ordinance violations.
 North Dakota--Total criminal data include sentence review only and postconviction remedy proceedings.
 Ohio--Municipal Court and County Court--Total criminal data include ordinance violations.
 Oklahoma--District Court--Total criminal data include ordinance violations.

Oregon--District Court--Total criminal data include ordinance violations.
 Pennsylvania--District Justice Court--Total criminal data include ordinance violations.
 Rhode Island--District Court--Total criminal data include preliminary hearings, moving traffic cases and ordinance violations.
 Utah--District Court--Total criminal data include postconviction remedy and sentence review only proceedings.
 --Circuit Court--Total criminal data include postconviction remedy proceedings.
 Vermont--District Court--Total criminal data include ordinance violations.
 Virginia--Circuit Court and District Court--Total criminal data include ordinance violations.
 West Virginia--Circuit Court--Total criminal data include postconviction remedy proceedings and extraordinary writs.

TABLE 12: Reported total state trial court traffic/other violation caseload, 1984. (continued)

Note: Mississippi is not included in this table because it did not report any traffic/other violation data in 1984, and did not respond to questions in the Trial Court Jurisdiction Guide for Statistical Reporting; therefore, information on traffic/other violation information is unavailable. All other state courts with traffic/other violation information are listed in this table, regardless of whether complete data are available. All data that are at least 90% complete are entered in the table. Blank spaces indicate that either the data are unavailable or less than 90% complete, or that the calculations are inappropriate. The "filed per 100,000 population" STATE TOTAL figure may not equal the sum of the individual state courts due to rounding.

P = Reported data include contested and uncontested parking cases.

CP = Reported data include contested, but not uncontested parking cases.

NH = Court does not handle parking cases.

NPA = The court handles parking cases but the data are unavailable.

N/A = The data are not available.

ⁱData are incomplete:

- California--Justice Court and Municipal Court--Total traffic/other violation data do not include all ordinance violations.
- Connecticut--Alderman's Court--Total traffic/other violation data do not include ordinance violations.
- Georgia--Probate Court--One court did not report total filing data.
- Guam--Superior Court--Total traffic/other violation data do not include all ordinance violations.
- Hawaii--Circuit Court--Total traffic/other violation data do not include reopened prior cases.
- Indiana--County Court--Total traffic/other violation data do not include ordinance violations.
--City Court and Town Court--There were 1,068 filings and 637 dispositions for this court which could not be identified by specific case category.
- Kansas--District Court--Total traffic/other violation data do not include juvenile traffic cases.
- Maryland--District Court--Total traffic/other violation data do not include ordinance violations.
- Massachusetts--Trial Court of the Commonwealth--Total traffic/other violation data do not include ordinance violations and all moving traffic cases.
- Michigan--District Court--District courts in the cities of Dearborn, Lincoln Park, Romulus, and East Lansing did not report.
- Minnesota--County Courts--Total traffic/other violation data do not include ordinance violations.
- Nebraska--County Court--Total traffic/other violation data do not include ordinance violations.
- New Jersey--Municipal Court--Total traffic/other violation data do not include ordinance violations.

- New Mexico--Bernalillo County Metropolitan Court--Total traffic/other violation data do not include ordinance violations.
- Ohio--Municipal Court and County Court--Total traffic/other violation data do not include ordinance violations.
- Oklahoma--District Court--Total traffic/other violation data do not include ordinance violations.
- Pennsylvania--District Court and Pittsburgh City Magistrates Court--Total traffic/other violation data do not include all ordinance violations.
- Vermont--District Court--Total traffic/other violation data do not include ordinance violations.
- Washington--District Court--One court did not report any 1984 data and one court did not submit all the reports.
--Municipal Court--Two courts did not report 1984 data.

^jExplanation of data included in the category:

- California--Justice Court and Municipal Court--Total traffic/other violation data include DWI/DUI cases.
- Colorado--District Court--Total traffic/other violation data include DWI/DUI cases.
- Connecticut--Justice of the Peace Court--Total traffic/other violation data include DWI/DUI cases.
- District of Columbia--Superior Court--Total traffic/other violation data include DWI/DUI cases.
- Florida--County Court--Total traffic/other violation data include DWI/DUI cases.
- Georgia--State Court and Probate Court--Total traffic/other violation data include DWI/DUI cases.
- Hawaii--District Court--Total traffic/other violation data include some misdemeanor cases.
- Iowa--District Court--Total traffic/other violation data include some misdemeanor cases.
- Louisiana--City Court and Parish Court--Total traffic/other violation data include DWI/DUI cases.
- Maine--District Court--Total traffic/other violation data include DWI/DUI cases.
- Maryland--District Court--Total traffic/other violation data include DWI/DUI cases.
- Massachusetts--Trial Court of the Commonwealth--Traffic/other violation data include DWI/DUI cases.
- Michigan--District Court--Total traffic/other violation data include DWI/DUI cases.
- Nebraska--Municipal Court--Total traffic/other violation data include misdemeanor and DWI/DUI cases.
- South Dakota--Circuit Court--Total traffic/other violation data include misdemeanor and criminal appeal cases.
- Texas--County-level Courts--Total traffic/other violation disposition data include traffic appeals.
- Utah--Circuit Court--Total traffic/other violation data include miscellaneous criminal cases.
- Wisconsin--Circuit Court--Total traffic/other violation data include some DWI/DUI cases.

TABLE 13: Reported total state trial court juvenile caseload, 1984.

Juvenile cases are counted at different points in the process, or the point is unknown in the following courts:

GUAM:					
Superior Court	G	529 ^J	92 ^J	17% ^J	
MISSISSIPPI:					
Chancery Court	G				
County Court	L				
Family Court	L				
OKLAHOMA:					
District Court	G				

Note: All state courts with juvenile jurisdiction are listed in this table, regardless of whether data are available. All data that are at least 90% complete are entered in this table. Blank spaces indicate that either the data are unavailable or less than 90% complete, or that the calculations are inappropriate. The "filed per 100,000 population" STATE TOTAL figure may not equal the sum of the individual state courts due to rounding.

^IData are incomplete:

Oregon Circuit Court--Juvenile data does not include petitions filed in Marion County.

^JExplanation of data included in the category:

Guam Superior Court--Total juvenile data include miscellaneous domestic relations cases and estate cases involving juveniles.

Indiana Superior Court--Total juvenile caseload includes paternity/bastardy cases.

Kentucky Superior Court--Total juvenile caseload includes paternity/bastardy cases.

Louisiana Family Court and Juvenile Court--Total juvenile data include domestic relations and mental health cases.

Missouri Circuit Court--Total juvenile figures include adoption and termination of parental rights cases.

New Jersey Superior Court--Total juvenile figures include adoptions, some miscellaneous domestic relations cases (termination of parental rights) and paternity cases without monetary awards.

South Carolina Family Court--Total juvenile data include traffic/other violation cases.

Virginia District Court--Total juvenile caseload includes juvenile traffic and support/custody cases.

FIGURE D: Dollar amount jurisdiction for original tort, contract, real property rights, and small claims filings in state trial courts, 1984.

Figure D lists all of the state courts that handle tort, contract, real property rights and small claims cases, and the dollar amount jurisdiction of each court in the various case types. Only when the courts are listed in this way does the wide variation in dollar amounts in civil cases become apparent. The comparability of caseloads among individual courts requires, of course, that courts being compared handle cases with similar dollar ranges.

Most states have one court in which there is no maximum dollar amount that can be sought, one or more courts in which the dollar amount is limited, and one or more courts that hear small claims cases. Comparisons among states can only be valid when they are based on aggregate caseload of all the courts in each state handling these kinds of cases. This figure has been

constructed to indicate which courts must be included in each state if valid comparisons are to be made.

This figure also reveals that there is little uniformity in what states are calling small claims cases. Four states and Puerto Rico have no small claims procedure. Some states permit jury trials in small claims cases; some do not permit lawyers; informal summary procedures predominate but are not universal.

In Table 14, tort, contract, real property rights, small claims, and unclassified civil caseloads are displayed without regard to the dollar amount jurisdiction of the courts involved. Any attempt to make comparisons among courts should take into account the dollar amount jurisdiction of the specific courts.

Source: 1984 State Trial Court Jurisdiction Guide for Statistical Reporting.

TABLE 14: Tort, contract, real property rights, and small claims filings and dispositions for state trial courts, 1984.

Variations in court organization and subject matter jurisdiction:

Caseload in this table is from both general jurisdiction and limited jurisdiction courts. The same case types may be handled in different courts from state to state. Only state totals can be compared. To facilitate comparisons, the states in these tables have been grouped into three categories: those states where a court has exclusive jurisdiction over a case type and where it submitted complete data; those states where more than one court handles a case type and each court submitted complete data; and those states that reported incomplete data from any one of these courts with that case type jurisdiction.

The court system charts in Part III should be consulted for a brief summary of the jurisdiction of each court.

Sources of data are found in Appendix B.

Variations in case classification and definitions:

The COSCA CSIM Committee has chosen to classify cases according to subject-matter rather than the remedy sought. Categories such as "law" and "equity" have been reclassified according to what was learned about case types handled in each court in the Trial Court Jurisdiction Guide.

Given what was learned about dollar amount jurisdiction in the Trial Court Jurisdiction Guide (See Figure D), this table displays together all the case types in which money damages may be requested and all the courts that handle those types of cases, regardless of dollar amount jurisdiction. Small claims are simply torts, contracts, and real property rights cases of small dollar amounts that are handled by summary procedures. States with small claims procedures will probably have a smaller tort, contract, and real property rights case count than states without such procedures. In addition, some states report one combined figure for torts, contracts, and real property rights cases. These cases are reported on this table in the unclassified category. In most instances, the state and court totals are the comparable figures.

Only states reporting data that could be displayed in the specific case type are included in these tables, and then only if the data are 90% complete.

In each case type (tort, contract, real property rights, small claims, and unclassified), the caseload of a single-tiered trial court can only be compared to the entire state caseload in states with two-tiered trial courts.

Variations in counting cases:

Caseload cannot be compared among courts that do not count cases at the same beginning and end

point. Those states that do not count cases at the filing of the petition or complaint are indicated by an "*" in the table.

Appropriate analyses:

All percentage calculations that were less than 1% but greater than .5% have been rounded up to 1%. All percentage calculations that were less than .5% and greater than 0% are displayed as a < 1%.

Disposed cases as percent of filed. This measure represents the percent of filed cases which the court disposed. The percent is computed by dividing the number of cases disposed by the number filed, and then multiplying by one hundred. A percent over one hundred indicates that the court disposed of more cases than were filed, thus reducing pending caseload. A percent significantly less than one hundred indicates that the court is not keeping up with the volume of cases being filed. This figure was not computed when the filed and disposed figures were not comparable.

Filed (disposed) per 100,000 population. The unit of state population used on all court caseload charts is 100,000. Filed per 100,000 population compensates for variations in state population and gives a more realistic basis for comparison of caseloads among states of various sizes. If the number of filings was not available but the number of dispositions was available, the number of cases disposed per unit of population was entered in this column in place of the number of cases filed per population unit, and the use of this alternative quantity was indicated by enclosing it in parentheses.

If all other factors (court jurisdiction, case definition, etc.) are similar, the filed-per-unit-of-population statistic will permit direct comparisons among states of the number of filed cases. For civil cases in trial courts, this measure will indicate, among other things, the propensity to litigate among the citizens in a given state.

Limitations on use:

In this table, only the STATE TOTALS can be compared in those states where more than one court has jurisdiction over the case type.

Comparisons can be made between the data reported for a state where an individual court has exclusive jurisdiction over the type of case and the STATE TOTALS for states where more than one court has jurisdiction. Comparisons cannot be made for states reporting incomplete data. Comparisons should be made only between those courts that use the same unit of count for counting civil cases.

Note: Blank spaces indicate that either the data are unavailable or less than 90% complete, or that the calculations are inappropriate. States omitted from this table did not specifically report tort, contract, real property rights or small claims cases in a way in which they could be separated from other case types. State courts with those jurisdictions can be identified in the state court system charts located in Part III of this Report.

NH = This case type is not handled in this court.
 X = Data for this case type are known to be included in the unclassified category, but are unavailable by category.

-- = Not applicable.
 * = Civil cases are counted at note of issue in these courts.

Data are incomplete:

- Alaska--District Court--Some tort, contract, and small claims cases are reported in the unclassified category.
- Arizona--Superior Court--Some tort, contract, and real property rights cases are included in unclassified cases.
- Arkansas--Municipal Court--Data are incomplete from 23 rural courts.
- City Court--Data are unavailable from five cities.
- Delaware--Superior Court--Some real property rights are included with unclassified cases.
- District of Columbia--Some real property rights cases are included in the unclassified category.
- Florida--Circuit Court-- Tort filings do not include some cases report with unclassified civil cases.
- Hawaii--Circuit Court--Data do not include District Court transfers or reopened prior cases.
- Idaho--Some torts are reported with unclassified cases.
- Illinois--Some real property rights cases are included with unclassified cases.
- Indiana--Superior Court and Circuit Court--Data do not include some cases reported in a "redocketed civil" area.
- City Court and Town Court--Some data included in grand total could not be separated into casetypes.

--County Court--Data do not include cases reported with a "redocketed civil" category.
 Maryland--Superior Court--A few cases from all case types are reported with unclassified civil cases.
 Massachusetts--Disposed small claims do not include data from the Housing Court Department. Some real property rights cases are reported with unclassified cases.
 Michigan--Circuit Court--Data were unavailable from four counties.
 --District Court--Data were unavailable from four cities.
 New Jersey--Superior Court--Some data are reported with other unclassified cases.
 New York--Supreme Court and County Court-- Real property rights cases include only condemnation cases.
 Washington--District Court--Two out of 68 court locations did not report complete data.

Explanation of data included in the category:
 Alabama--Circuit Court--Unclassified data also include civil appeals cases and postconviction remedy proceedings.
 Alaska--Superior Court--Unclassified data include contract and real property rights cases.
 --District Court--Unclassified data include tort, contract, and small claims cases filed in low volume District Courts, and a few actions other than cases.
 California--Justice Court--Data include miscellaneous civil cases.
 --Municipal Court--Data include miscellaneous civil cases.
 Colorado--County Court--Data include civil appeals.
 Delaware--Superior Court--Data include all tort and contract cases, and some real property rights cases.
 --Court of Chancery--Data include some mental health cases.
 --Court of Common Pleas--Total disposition figure includes tort, contract, real property rights, unclassified civil, and miscellaneous civil cases.
 District of Columbia--Unclassified cases include all tort and contract, and some real property rights cases.

TABLE 15: Domestic relations caseload for state trial courts, 1984.

TABLE 16: Estate caseload for state trial courts, 1984.

TABLE 17: Mental health caseload for state trial courts, 1984.

TABLE 18: Civil appeals caseload for state trial courts, 1984.

Variations in court organization and subject matter jurisdiction:

Caseload in these tables are from both general jurisdiction and limited jurisdiction courts. The same case types may be handled in different courts, from state to state. Only state totals can be compared. To facilitate comparisons, the states in these tables have been grouped into three categories: those states where a court has exclusive jurisdiction over a case type and where it submitted complete data; those states where more than one court handles a case type and each court submitted complete data; and those states that reported incomplete data from any one of the state courts with that case type jurisdiction.

The court system charts in Part III should be consulted for a brief summary of the jurisdiction of each court.

Sources of data are found in Appendix B.

Variations in case classification and definitions:

The COSCA CSIS Committee has chosen to classify cases according to subject-matter rather than the remedy sought. Categories such as "law" and "equity" have been reclassified by case types handled in each court as identified in the Trial Court Jurisdiction Guide.

Even with use of the Model Statistical Dictionary case definitions, the classifications vary from state to state. Domestic relations, for example, may include all family matters in some states while other states report only divorce actions as domestic relations cases. The CSIM classification scheme includes marriage dissolution, support/custody, adoption, paternity/bastardy, and miscellaneous as subcategories under domestic relations cases.

Some states count support and custody matters in their juvenile caseload, whereas the classification used here places these matters in domestic relations caseload. In some states support/custody issues are counted as separate cases, while other states treat support/custody issues as part of marriage dissolution cases. These situations are described partially in the "data definition" column on Table 15. Care should be taken to compare only those courts with similar data definitions.

The CSIM classification scheme includes probate/wills/intestate and guardianship/conservatorship/trusteeship as subcategories under estate cases.

Incidental appellate jurisdiction is indicated on Table 18 and in Figure H.

Only states reporting data that could be displayed in the specific case type are included in these tables, and then only if the data are 90% complete. Many courts do not break data down beyond the broad civil, criminal, traffic, and juvenile categories.

Variations in counting cases:

Caseload cannot be compared among courts that do not count cases at the same beginning and end

point. Those states that do not count cases at the filing of the petition or complaint are indicated by an "*" in each table.

Appropriate analyses:

All percentage calculations that were less than 1% but greater than .5% have been rounded up to 1%. All percentage calculations that were greater than 0% but less than .5% are displayed as <1%.

Disposed cases as percent of filed. This measure represents the percent of filed cases disposed by the court. The percent is computed by dividing the number of cases disposed by the number filed and then multiplying by one hundred. A percent over one hundred indicates that the court disposed of more cases than were filed, thus reducing pending caseload. A percent significantly less than one hundred indicates that the court is not keeping up with the volume of cases being filed.

Filed (disposed) per 100,000 population. The unit of state population used on all court caseload charts is 100,000. Filed per 100,000 population compensates for variations in state population and gives a more realistic basis for comparison of caseloads among states of various sizes.

If the number of filings was unavailable or was incomplete but the number of dispositions was available, the number of cases disposed per unit of population was entered in this column in place of the number of cases filed per population unit, and the use of this alternative quantity was indicated by enclosing it in parentheses.

If all other factors (court jurisdiction, case definition, etc.) are similar, the filed-per-unit-of-population statistic will permit direct comparisons among states of the number of filed cases. For civil cases in trial courts, this measure will indicate, among other things, the propensity to litigate among the citizens in a given state.

Limitations on use:

In these case type tables, only the STATE TOTALS can be compared in those states where more than one court has jurisdiction over the case type.

Comparisons can be made between the data reported for a state where an individual court has exclusive jurisdiction over the type of case and the STATE TOTALS for states where more than one court has jurisdiction. Comparisons cannot be made for states reporting incomplete data. Comparisons should be made only between those courts that use the same unit of count for counting civil cases.

Note: States omitted from this table did not specifically report domestic relations cases. State courts with this jurisdiction can be identified in the state court system charts located in Part III of this Report. All available data that are at least 90% complete are entered in the table. Blank spaces indicate that either the data are unavailable or less than 90% complete, or that the calculations are inappropriate. States included under "incomplete state data" may present data from only one of several courts with this jurisdiction

* = These courts count civil cases "at issue" rather than at the filing of the petition or complaint.

Data definition codes:

- 1 = Separate figures for marriage dissolution, support/custody, and URESA.
- 2 = Separate figures for marriage dissolution and support custody.
- 3 = Separate figures for marriage dissolution and URESA.
- 4 = No subcategories in domestic relations.

5 = Unknown or figures included with unclassified civil.

N/A = Data are not available

ⁱData are incomplete:

- California--Superior Court--Total domestic relations caseload does not include some support/custody, all adoption, and all paternity/bastardy cases.
- Georgia--Superior Court--Total domestic relations caseload does not include adoption data.
- Guam--Superior Court--Some domestic relations cases are included with miscellaneous civil and juvenile data.
- Hawaii--Circuit Court--Total domestic relations caseload does not include some cases reported in reopened prior case category
- Indiana--Superior Court and Circuit Court--Total domestic relations caseload does not include original support/custody cases, paternity/bastardy cases and adoption cases.
- Iowa--District Court--Total domestic relations filings do not include adoption or paternity/bastardy cases. Total domestic relations dispositions do not include adoption, paternity/bastardy, or family in need of assistance cases.

South Carolina--Probate Court	16,506 ⁱ	10,047 ⁱ	60% ⁱ	500 ⁱ
Tennessee--Circuit Court Chancery Court	8,603			182
Vermont--Probate Court	2,873 ⁱ	2,493		470 ⁱ

Note: Blank spaces indicate that either the data are unavailable or less than 90% complete, or that the calculations are inappropriate. States included under "incomplete state data" may present data from only one of several courts with this jurisdiction. States omitted from this table did not specifically report estate cases. State courts with this jurisdiction can be identified in the state court system charts located in Part III of this Report.

* = These courts count civil cases "at issue" rather than at the filing of the petition or complaint.

ⁱData are incomplete:

Guam Superior Court--Some estate data are included in the miscellaneous civil and juvenile data.
Hawaii Circuit Court--Some estate cases are found in the reopened prior cases.

Indiana Superior Court and Circuit Court--Estate caseload does not include cases included in "redocketed civil" category.
North Carolina Superior Court--Some estate cases are included in the unclassified civil category.
South Carolina Probate Court--Total estate data do not include some guardianship cases.
Vermont Probate Court--Total estate filed caseload does not include gifts to minors.
^jExplanation of data included in the category:
Idaho District Court--Estate caseload includes mental health cases.
Indiana Probate Court--Total estate figures include adoption cases.
Minnesota County Courts--Estate data include cases from District Court.
Oklahoma District Court--Estate data include mental health cases.

TABLE 17: Mental health caseload for state trial courts, 1984.

TABLE 18: Civil appeals caseload for state trial courts, 1984. (continued)

Note: Blank spaces indicate that either the data are unavailable or less than 90% complete, or that the calculations are inappropriate. States included under "incomplete state data" may present data from only one of several courts with this jurisdiction. States omitted from this table did not specifically report civil appeal cases. States with this jurisdiction can be identified in the state court system charts located in Part III of this Report.

*This court counts cases "at issue" rather than at the filing of the petition or complaint.

Appeal type code:

- A = The reported data represent appeal of administrative agency cases.
- Aⁱ = The court has jurisdiction over appeal of administrative agency cases, but the data are unavailable.
- T = The reported data represent appeal of trial court cases.
- Tⁱ = The court has jurisdiction over appeal of trial court cases, but the data are unavailable.

ⁱData are incomplete:

- Delaware Superior Court--Some civil appeals are included in the unclassified civil category.
- Hawaii Circuit Court--Some civil appeals are included in the miscellaneous civil category.

Illinois Circuit Court--Some civil appeals are included in the miscellaneous remedy category.

Kentucky Circuit Court--Total civil appeals figures do not include any administrative appeals, except for workmen's compensation cases. The remainder of administrative appeals are included in the "other civil" category.

Maryland Circuit Court--Some civil appeals are included in the unreported categories.

Michigan Circuit Court--No data were available for Hillsdale, Osceola, Kalkaska, and Delta counties.

Texas District Court--Civil appeals do not include agency appeals other than workmen's compensation cases. These are included in other civil.

Utah District Court--Total civil appeals do not include appeals de novo from the Justice of the Peace court. These cases are categorized by case type.

Wyoming District Court--No data were reported from Sublette County for the first half of the year.

^jExplanation of data included in the category:

- Minnesota District Court--Civil appeal data includes criminal appeal cases.
- Wyoming District Court--Civil appeal data includes criminal appeal cases.

TABLE 19: Civil jury and non-jury trial dispositions by case type, 1984.

Sources of data are found in Appendix B.

Variations in court organization and subject matter jurisdiction:

The "+" symbol under the heading "case type" indicates what case types are reported for each piece of trial data. An "o" symbol indicates that the reported figures do not include that case type. Different kinds of cases take differing lengths of time to hear depending on the complexity of the issue involved: an uncontested divorce case will take very little time, while a tort or contract case might take days. Trial dispositions should only be compared for the same case types. General jurisdiction and limited jurisdiction courts reporting data are included in this table.

Variations in case classifications and definitions:

Case categories and the data classified in each case category vary from state to state. The CSIM case types focus on subject-matter rather than on the remedy sought.

The dollar amount sought in civil lawsuits also varies from jurisdiction to jurisdiction, as is indicated in Figure D. Tort, contract, real property rights, and small claims cases should only be compared if the dollar amount jurisdiction is similar.

Variations in counting both cases and trials:

Caseload cannot be compared among courts that do not count cases in the same way. Most of the courts on this table count the petition or complaint as a case at the time that it is filed. An "*" indicates those courts that count civil cases "at issue" rather than at the filing of the petition or complaint.

The definitions used by each court to count trials are indicated in a separate column. Comparisons can only be made between courts that count trials in the same way.

It should also be pointed out that some states may be reporting informal hearings as trials. In the 1985 Annual Report, an effort will be made to draw greater distinctions between hearings and trials.

Appropriate analyses:

In some situations, the number of trials were available but the number of total dispositions were unavailable. In these instances, the number of filings were used as the denominator and were put in parentheses to indicate they were filings rather than dispositions.

All percentage calculations that were less than 1% but greater than .5% have been rounded up to 1%. All percentage calculations that are greater than 0% but less than .5% are displayed as a <1%.

Trials as a percent of dispositions. Dividing the number of trials conducted by the total number of cases disposed of for the appropriate case type results in the trial rate for that case type for the court.

Jury trials as a percent of dispositions. Dividing the number of jury trials conducted by the total number of cases disposed of for the appropriate case type results in the jury trial rate for that case type for the court.

Jury trials as a percent of trials. Dividing the number of jury trials by the total number of trials conducted for that case type results in the proportion of trials that are trials by jury for that case type for the court.

Limitations on use:

Comparisons on these tables must be restricted to the court level, and must be controlled for case type, unit of count, and trial definitions. State totals have not been computed in order to avoid any temptation to compare "apples and oranges."

Care should also be taken to compare only those courts that share similar rules regarding the availability of jury trials. For example, in some states both parties to civil litigation must agree to a jury trial, while in other states one of the parties can demand a jury trial.

TABLE 19: Civil jury and non-jury trial dispositions by case type, 1984.

State and court title	Case type for which trial data given								Jury trial definition	Number of dispositions for case types described	Number of trials	Trials as a percent of dispositions	Number of jury trials	Jury trials as a percent of dispositions	Jury trials as a percent of trials

Note: All available data are entered in the table and all appropriate calculations are included. Blank spaces indicate that the data are unavailable, less than 90% complete, or calculations are inappropriate.

*A civil case is counted when it has reached issue.

-- = Not applicable.

+ = Data are given for these case types.

o = Data do not include these case types.

Trial definition:

A = A jury trial is counted at jury selection, empaneling or swearing in.

B = A jury trial is counted at introduction of evidence or swearing of first witness.

C = A jury trial is counted at verdict or decision.

ⁱData are not complete:

Arizona--Superior Court--Tort, contract, and real property rights statistics do not include transfers in/out. Domestic relations cases in Arizona do not include support/custody cases, which are considered part of marriage dissolution cases.

California--Superior Court--Domestic relations does not include some support/custody, all adoption, and all paternity/bastardy cases.

Connecticut--Superior Court--Trials for tort, contract, and domestic relations cases do not include trials conducted by geographic area courts. Domestic relations cases in Connecticut do not include support/custody cases, which are considered part of marriage dissolution cases.

Table 19: Civil jury and non-jury trial dispositions by case type, 1984. (continued)

District of Columbia--Superior Court--Real property rights cases do not include landlord and tenant matters.

Florida--Circuit Court and County Court--Dispositions in Florida do not include reopened cases dispositions. Tort cases do not include professional tort, which is combined with other case types in another line in this table.

Hawaii--Circuit Court--All case types do not include some cases reported as reopened prior cases.

Idaho--District Court--Some tort cases and miscellaneous civil are combined with other case types in another line in this table.

Illinois--Circuit Court--All tort, but only some contract and real property rights cases are included.

Indiana--Superior Court and Circuit Court--All civil case disposition figures do not include some cases reported as "redocketed civil" in Indiana. Domestic relations figure does not include some support/custody cases, which are combined with other case types in another line in this table.

Probate Court--Adoptions are the only domestic relations cases handled.

City Court and Town Court--Some cases reported were not identified by case type.

County Court--Some cases reported were not identified by case type.

Iowa--District Court--Estate cases do not include guardianship/conservatorship/trusteeship. Domestic relations do not include adoption, paternity/bastardy, or family in need of assistance cases.

Kansas--District Court--Domestic relations does not include adoption cases.

Maine--Superior Court--Domestic relations does not include support/custody (which is not counted separately from marriage dissolution) or paternity/bastardy cases. Civil appeals do not include administrative agency appeals.

New Jersey--Superior Court and County Court--Some tort, contract, real property rights, mental health, estate, and miscellaneous civil cases are found in a combined statistic on another line in this table.

New York--Supreme Court and County Court--Total does not include uncontested marriage dissolution cases or appeals of trial court cases.

North Carolina--Superior Court--Adoption cases are not included in domestic relations.

Ohio--Court of Common Pleas--Tort figures include only personal injury cases. Domestic relations figures include only marriage dissolution cases.

County Court--Some contract cases are combined with other cases on another line in this table.

Municipal Court--Some contract cases are combined with other cases on another line in this table.

Oregon--Circuit Court--The combined case types include civil and criminal appeals and support/custody. The domestic relations figure along does not include adoptions or the support/custody cases included in the combined figure.

South Dakota--Circuit Court--The combined case types include only support/custody and paternity/bastardy in the domestic relations category, and trial court appeals in the appeals category. The separate domestic relations figures includes contested marriage dissolution and some support/custody cases.

Texas--District Court--Domestic relations cases do not include annulments or paternity/bastardy cases.

Virginia--Circuit Court--Domestic relations includes only marriage dissolution. The combined case types include tort, contract some real property rights, adoptions, paternity/bastardy, some support/custody, and some miscellaneous civil cases.

Washington--Superior Court--Domestic relations does not include domestic violence petitions. Two counties did not report trial data by case type.

District Court--One court submitted no data, another incomplete data.

Wyoming--District Court--Sublette County reported data for only the first half of the year.

JExplanation of data included in the category:
 Indiana--Superior Court and Circuit Court--Trial figures include redocketed figures as well as "hearings".
 South Dakota--Circuit Court--Total trial figures include hearings.
 Texas--District Court--Domestic relations figures include child-victim petitions. County-Level Courts--Civil case data for Harris County (Houston) is not included in separate case categories, but is included in the combined case types on a later line in this chart. The combined case types also include juvenile child-victim petitions from all county courts. All disposed civil case type data elements include appeals that could not be broken down by case type.
 Utah--District Court--Domestic relations does not include spouse abuse case dispositions.
 Vermont--Superior Court--Domestic relations includes only paternity/bastardy cases.
 West Virginia--Circuit Court--Includes tort, contract, real property rights, marriage dissolution, support/custody, paternity/bastardy, and contested estate cases.
 Wisconsin--Circuit Court--The combined case types include traffic/other violations appeals.
 Wyoming--District Court--Juvenile cases and criminal appeals are included in the civil data.

FIGURE E: Criminal case unit of count used by the state trial courts, 1984.

FIGURE F: Minimum statutory definitions of a felony, 1984.

Criminal case unit of count. The CSIM Project has always been concerned about the fact that states prosecute cases in substantially different ways, and that this ultimately has an impact on the way such cases are counted by the courts. Since the publication of the 1975 volume of this series, some effort has been made to identify the various methods of counting criminal cases for each state court. The two predominant methods were either a defendant count, or a charging document count. Since charging documents could have one or more defendants, it was assumed that courts using charging documents would have fewer per capita criminal cases than those states who reported cases using the actual number of defendants. Therefore, states were grouped according to their units of count.

The 1984 Trial Court Jurisdiction Guide for Statistical Reporting revealed several problems with that method of counting criminal cases. First, counting the number of charging documents is insufficient as a measure of counting cases unless one knows the possible contents of such documents. For example, when multiple defendants are involved in the same crime, is it common practice to have one, or more than one defendant per document? In addition, when there are multiple offenses per incident, does common practice call for a single charging document for all offenses or a separate document for each offense?

Of equal importance to the contents of a charging document in counting criminal cases is the point in the process when a criminal case is counted. The two predominant points are at the filing of the complaint, and the filing of the information or indictment. Since the filing of the complaint occurs much earlier in the process than the filing of the information or indictment, courts that count cases at the filing of the complaint should have a much higher caseload than courts which wait until the information or indictment before counting criminal cases.

Figure E presents information on all dimensions of the criminal unit of count: the point in the process at which criminal cases are counted; the number of defendants per case; and the contents of charging documents. This information has been organized into the following

typology. The contents of the cases (i.e., the number of possible defendants/charges) are represented by the numbers one through eleven. The point in the process at which a case is counted is represented by the letters A through E.

Criminal case unit of count codes:

Contents of case:

1. Single defendant/single charge
2. Single defendant/single incident
3. Single defendant/single incident (maximum number of charges)
4. Single defendant/one or more incidents
5. Single defendant/varies with prosecutor
6. One or more defendants/single charge
7. One or more defendants/single incident
8. One or more defendants/single incident (maximum number of charges)
9. One or more defendants/one or more incidents
10. One or more defendants/varies with prosecutor
11. Varies with prosecutor/varies with prosecutor

Point at which a case is counted:

- A. At the filing of the information or indictment
- B. At the filing of the information or complaint
- C. At the filing of the complaint (warrant or accusation)
- D. At the assigning of a docket number
- E. At the arraignment (first appearance)

The combination of these two dimensions of the criminal unit of count is provided for each court when criminal data are presented.

Defining felonies. Figure F illustrates the variation that exists among the states regarding the statutory definition of a felony. Although the overwhelming majority of states define felonies by possible sentences exceeding approximately one year in the state prison, almost one-third of the states define a felony as crimes with possible sentences of: substantially less than a year; two or more years; or with no minimum sentence length.

*In many jurisdictions, felonies are defined by statutes, not by length of sentence.
 Source: 1984 State Trial Court Jurisdiction Guide for Statistical Reporting.

TABLE 20: Triable felony, limited felony, misdemeanor, and DWI/DUI filings and dispositions for state trial courts, 1984.

Variations in court organization and subject matter jurisdiction:

States reported in this table include all courts with jurisdiction over these criminal case types--both general jurisdiction and limited jurisdiction courts. The same case types may be handled in different courts from state to state.

The court system charts in Part III should be consulted for a brief summary of the jurisdiction of each court. Only state totals should be compared among states with courts using the same unit of count.

Sources of data are found in Appendix B.

Variations in case classification and definitions:

The case categories and the data classified in the case categories vary from state to state. Therefore, the case types used in this Report are those chosen for inclusion in the State Court Model Annual Report and State Court Model Statistical Dictionary.

Even with use of the model case types, however, caseloads are not comparable if state statutes vary as to the types of criminal cases classified as felonies or misdemeanors. Certain drug offenses, for example, may be serious felonies in one state but only misdemeanors in another, see Figure F for felony variations.

Only states reporting data that could be displayed in the specific case types are included in this table, and then only if the data are at least 90% complete. Many courts do not break data down beyond the broad criminal category.

In past volumes of this series, separate tables were presented for the various case types consolidated into this table. However, since DWI/DUI cases can be either felonies or misdemeanors, and with the introduction of the new limited felony category, the presentation of separate tables would not present a complete picture of either felonies or misdemeanors. Therefore, this table was developed to provide a more comprehensive look at the total state offense caseload. Unless otherwise indicated, these figures do not include criminal appeals.

Variations in counting cases:

The various units of count in criminal cases are identified in the column labeled "unit of count." A quick glance at this column indicates that few states use the same unit of count in their general jurisdiction and limited jurisdiction courts. It is, therefore, impossible to arrange this table so that courts having the same unit of count are together because the courts handling criminal cases in a state would be separated. This means, unfortunately, that total state caseloads are not comparable unless parallel courts in two or more states handle the same kinds of cases and count them in the same way, e.g., Alabama and California.

A more complete description of these units of count can be found in Figure E.

Appropriate analysis:

All percentage calculations that were less than 1% but greater than .5% have been rounded up to 1%. All percentage calculations that were greater than 0% but less than .5% are displayed as a < 1%.

Disposed cases as percent of filed. This measure represents the percent of filed cases which the court disposed. The percent is computed by dividing the number of cases disposed of by the number filed, and then multiplying by one hundred. A percent over one hundred indicates that the court disposed of more cases than were filed, thus reducing pending caseload. A percent significantly less than one hundred indicates that the court is not keeping up with the volume of cases being filed. This figure was not computed when the filed and disposed figures were not comparable.

Filed (disposed) per 100,000 population. The unit of state population used on all court caseload charts is 100,000. Filed per 100,000 population compensates for variations in state population and gives a more realistic basis for comparison of caseloads among states of various sizes. If the number of filings was not available but the number of dispositions was available, the number of cases disposed per unit of population was entered in this column in place of the number of cases filed per population unit, and the use of this alternative quantity was indicated by enclosing it in parentheses. Population figures represent the 18-year-old-plus state population.

If all other factors (court jurisdiction, case definition, unit of count, etc.) are similar, the filed-per-unit-of-population statistic will permit direct comparisons among states of the number of filed cases.

Felony cases are easier to compare in this table than the other case types because almost all felony cases are handled in general jurisdiction courts.

Limitations on use:

Only STATE TOTALS can be compared in those states where more than one court has jurisdiction over the case type. Comparisons can be made between the data reported for a state with an individual court that has exclusive jurisdiction over the type of case, and the STATE TOTALS for states where more than one court has jurisdiction if the units of count are the same. Comparisons should be avoided for states not reporting data for one or more courts that have jurisdiction over the case type.

It should also be noted that any change(s) in the caseload of a court may not indicate a change in the actual "offense-rate" within a state, but may merely reflect changes in the criminal code, law enforcement policies, and/or citizen reporting rates--among other things. Consequently, these data can be used for little more than court management measures.

Table 20: Triable felony, limited felony, misdemeanor, and DWI/DUI filings and dispositions for state trial courts, 1984. (continued)

Note: All available data that are at least 90% complete are entered in the table. Blank spaces indicate that either the data are unavailable or less than 90% complete, or the calculations are inappropriate. States omitted from this table did not have any courts report their criminal data in a way that the data could meaningfully be separated into these major state case types. State courts with criminal jurisdiction can be identified in the state court system charts located in Part III of this Report.

NH = This case type is not handled in this court.

X = Data for this case type are known to be included in the unclassified category, but are unavailable by category.

-- = Not applicable.

Criminal case unit of count codes:

Contents of case (number of defendants/number of charges):

1. Single defendant/single charge
2. Single defendant/single incident
3. Single defendant/single incident (maximum number of charges)
4. Single defendant/one or more incidents
5. Single defendant/varies with prosecutor
6. One or more defendants/single charge
7. One or more defendants/single incident
8. One or more defendants/single incident (maximum number of charges)
9. One or more defendants/one or more incidents
10. One or more defendants/varies with prosecutor
11. Varies with prosecutor/varies with prosecutor

Point at which case is counted:

- A. At the filing of the information or indictment
- B. At the filing of the "information or complaint"
- C. At the filing of the complaint (warrant or accusation)
- D. At the assigning of a docket number
- E. At the arraignment (first appearance)

iData are incomplete:

Arizona--Superior Court-- Felony and misdemeanor data are included in the unclassified criminal data.
 Arkansas--Municipal Court--The following courts did not report or reported partially: Alma, Crawfordville, Farmington, Humnoke, Mountainburg, Ash Flat, Bryant, Clinton, Crossett, Dermott, De Valls Bluff, Endora, Fordyce, Lake Village, Lake City, Mammoth Spring, Marshall, Osceola, Siloam Springs, Magnolia, Russellville, and Star City.
 --City Court--There were no reports or only 6 months of data reported months of data reported from the cities of Alma, Crawfordville, Farmington, Humnoke, and Mountainburg.
 Florida--Circuit Court and County Court--Unclassified criminal dispositions do not include reopened cases.
 Hawaii--Circuit Court--All criminal data do not include reopened prior cases.
 --District Court-- Misdemeanor data do not include some criminal cases counted with ordinance violations.
 Idaho--District Court-- DWI/DUI data do not include preliminary hearings from the Magistrate Court.
 Illinois--Circuit Court-- Misdemeanor data do not include conservation violations from outside Cook County.
 Indiana--City Court and Town Court--Grand total data include 1,068 filings and 637 dispositions which could not be identified by case type.
 Iowa--District Court--Some misdemeanor cases are included with traffic. Third offense DWI/DUI cases are included with felony data.

Maine--District Court--Some misdemeanor cases are included with traffic.
 Massachusetts--Trial Court of the Commonwealth-- DWI/DUI data include only filings from the District Court Department.
 Michigan--Circuit Court--No data were available for Hillsdale, Osceola, Kalkaska, or Delta counties.

--District Court--District courts in Dearborn, Lincoln Park, Romulus, and East Lansing did not report. Limited felony data do not include preliminary exams.
 Minnesota--County Courts-- Misdemeanor data are also found with DWI/DUI data.

Washington--District Court--One court did not submit any 1984 data; another court did not submit all the reports
 --Municipal Court--Two courts did not report data for 1984.

jExplanation of data included in the category:

Alabama--Circuit Court--Unclassified criminal and total criminal data include criminal appeals figures.
 Alabama--District Court--Unclassified criminal and total criminal data include preliminary hearings.
 Alaska--District Court-- Misdemeanor data include ordinance violation, misdemeanor traffic, and DWI/DUI cases.
 Arizona--Superior Court--Unclassified criminal includes felonies and misdemeanors.
 Arkansas--Municipal Court--Unclassified criminal data include misdemeanor and ordinance violation cases.
 --City Court--Unclassified criminal data and total criminal data include misdemeanor and ordinance violation cases.
 --Circuit Court--Total felony and misdemeanor figures include DWI/DUI cases.

California--Superior Court-- Felony data include DWI/DUI cases.

--Justice Court-- Limited Felony figures include preliminary hearings bound over, and other transfers. Misdemeanor data include ordinance violation cases.

--Municipal Court-- Limited felony cases include preliminary hearing bindovers and transfers. Misdemeanor data include ordinance violation cases.

Colorado--County Court-- Misdemeanor data include de novo criminal appeals.
 Connecticut--Superior Court--Unclassified criminal data include felonies, misdemeanors, and ordinance violations.

Delaware--Superior Court--Unclassified criminal disposition data include criminal appeals.

--Municipal Court of Wilmington--Unclassified criminal include misdemeanors, ordinance violations, and most DWI/DUI cases.

--Alderman's Court--Unclassified criminal data include ordinance violations.

--Justice of the Peace Court-- Misdemeanor data include some DWI/DUI cases.
 Florida--Circuit Court--Unclassified criminal data include miscellaneous criminal cases.

Georgia--Superior Court-- Misdemeanor data include criminal appeals, some DWI/DUI cases and ordinance violations.

--State Court-- Misdemeanor data include DWI/DUI cases and ordinance violations.

Guam--Superior Court-- Misdemeanor data include DWI/DUI cases and ordinance violations.

Idaho--District Court--Total misdemeanor figure includes ordinance violations.

Illinois--Circuit Court-- Felony data include preliminary hearings from courts "downstate." Misdemeanor data include ordinance violations and conservation violations in the Circuit Court of Cook County.

Table 20: Triable felony, limited felony, misdemeanor, and DWI/DUI filings and dispositions for state trial courts, 1984. (continued)

Indiana--Superior Court-- Felony and misdemeanor data include DWI/DUI cases. Unclassified criminal data include postconviction remedy and sentence review only cases.

--County Court-- Limited felony data include Class D felony cases. Limited felony and misdemeanor data include ordinance violations and DWI/DUI cases.

--Municipal Court of Marion County--Unclassified criminal data include ordinance violations.

--City Court and Town Court-- Misdemeanor data include DWI/DUI cases.

Iowa--District Court-- Felony data include third offense DWI/DUI cases.

Kansas--District Court-- Misdemeanor disposition data include appeal cases from the lower courts.

Kentucky--Circuit Court--Unclassified criminal data include postconviction remedy and sentence review only cases.

--District Court-- Misdemeanor data include DWI/DUI cases, ordinance violations, and sentence review only proceedings.

Louisiana--District Court--Unclassified criminal data include criminal appeals and miscellaneous criminal data.

Maine--Superior Court-- Misdemeanor data include criminal appeals.

Maryland--Circuit Court--Unclassified criminal data include miscellaneous criminal cases.

Massachusetts--Trial Court of the Commonwealth-- Felony and misdemeanor criminal complaints from the District Court department and Housing Court include DWI/DUI and ordinance violations.

Michigan--District Court-- Misdemeanor data includes ordinance violations.

Minnesota--District Court-- Misdemeanor data include ordinance violations. DWI/DUI data include misdemeanor cases.

Missouri--Circuit Court--Unclassified criminal data include criminal appeals and miscellaneous criminal cases.

Montana--District Court--Unclassified criminal data include criminal appeals and miscellaneous criminal cases.

Nebraska--County Court--Unclassified criminal data include ordinance violations.

New Jersey--Municipal Court--Unclassified criminal data include ordinance violations.

New Mexico--District Court--Unclassified criminal data include criminal appeals.

--Bernalillo County Metropolitan Court-- Misdemeanor data include ordinance violations.

New York--Supreme Court and County Court-- Felony data include DWI/DUI cases. --District Court and City Court--Unclassified criminal data include ordinance violations.

North Carolina--Superior Court-- Misdemeanor data include criminal appeals. --District Court--Unclassified criminal data include ordinance violations.

North Dakota--County Court-- Misdemeanor data include DWI/DUI cases.

Ohio--County Court and Municipal Court-- Misdemeanor data include criminal appeals and ordinance violations.

Oklahoma--District Court-- Felony data include some miscellaneous criminal cases.

Misdemeanor data include criminal appeals and ordinance violations.

Oregon--District Court--Unclassified criminal data include ordinance violations.

Pennsylvania--Court of Common Pleas--Unclassified criminal data include criminal appeals.

--District Justice Court--Unclassified criminal data include ordinance violations.

--Philadelphia Municipal Court-- Misdemeanor data include DWI/DUI cases and ordinance violations.

--Pittsburgh City Magistrates Court-- Misdemeanor data include some ordinance violations.

Puerto Rico--Superior Court-- Felony and misdemeanor data include criminal appeals.

Rhode Island--District Court-- Limited felony data include preliminary hearing proceedings. Misdemeanor data include moving traffic cases not handled by the Administrative Adjudication Division, ordinance violations, and DWI/DUI cases.

South Carolina--Circuit Court--Unclassified criminal data include miscellaneous cases.

Tennessee--Circuit Court and Criminal Court-- DWI/DUI and unclassified criminal data include criminal appeals.

Texas--County Courts-- DWI/DUI disposition data include criminal appeals.

Utah--District Court--Unclassified criminal data include criminal appeals. --Circuit Court--Unclassified criminal data include some miscellaneous criminal cases and postconviction remedy cases.

Vermont--District Court-- Felony data include limited felony cases. Misdemeanor data include DWI/DUI cases and ordinance violations.

Virginia--Circuit Court-- Misdemeanor data may include a few ordinance violations.

West Virginia--Circuit Court--Total criminal data include postconviction remedy proceedings and extraordinary writs.

--Magistrate Court-- Misdemeanor data include DWI/DUI cases.

Wisconsin--Circuit Court-- Felony data include limited felony cases.

TABLE 21: Criminal appeals caseload for state trial courts, 1984.

TABLE 22: Preliminary hearing proceedings for state trial courts, 1984.

Variations in court organization and subject matter jurisdiction:

Caseload in these tables is from both general jurisdiction and limited jurisdiction courts. The same case types may be handled in different courts from state to state. The court system charts in Part III should be consulted for a brief summary of the jurisdiction of each court.

Only state totals can be compared among states using the same unit of count. To facilitate comparisons, the states in these tables have been grouped into three categories: those states where a court has exclusive jurisdiction over a case type and where it reported complete data; those states where more than one court handles a case type and each court submitted complete data; and those states where data from any one of the courts with that case type jurisdiction are incomplete.

Sources of data are found in Appendix B.

Variations in case classification and definitions:

Incidental appellate jurisdiction in the trial courts is explained in more detail in Figure H. Table 21 provides criminal appeal data for all those courts that reported criminal appeals separately. Some states combine civil and criminal appeals in one figure. Others do not count appeals separately from criminal caseload.

In the 1981 Annual Report, CSIM began counting limited felonies (e.g., those felonies that are finally disposed in limited jurisdiction courts) with the regular felony count, and not with the preliminary hearing data. The preliminary hearing count in Table 22 represents only those felonies that are likely to also be counted in general jurisdiction felony counts (e.g., in this table preliminary hearings include such things as cases bound over, etc.). Preliminary hearings are not required in all states, and their use varies from state to state.

The case types used in this report are those chosen for inclusion in the State Court Model Annual Report and State Court Model Statistical Dictionary.

Only states reporting data that could be displayed in the specific case types are included in the tables, and then only if the data are at least 90% complete. Many courts do not break data down beyond the broad civil, criminal, traffic, and juvenile categories.

Variations in counting cases:

Each of these tables has a column indicating the unit of count used by the court. The distinctions among ways of counting criminal cases are spelled out in detail in Figure E of this Report.

Appropriate analysis:

All percentage calculations that are less than 1% but greater than .5% are rounded up to 1%. All percentage calculations that are greater than 0%, but less than .5% are displayed as <1%.

Disposed cases as percent of filed. This measure represents the percent of filed cases disposed by the court. The percent is computed by dividing the number of cases disposed of by the number filed and then multiplying by one hundred. A percent over one hundred indicates that the court disposed of more cases than were filed, thus reducing pending caseload. A percent significantly less than one hundred indicates that the court is not keeping up with the volume of cases being filed. This measure was not computed if the filing and disposition data were not comparable.

Filed (disposed) per 100,000 population. The unit of state population used on all court caseload charts is 100,000. Filings per 100,000 population compensates for variations in state population and gives a more realistic basis for comparison of caseloads among states of various sizes. If the number of filings was not available but the number of dispositions was available, the number of cases disposed per unit of population was entered in this column in place of the number of cases filed per population unit, and the use of this alternative quantity was indicated by enclosing it in parentheses. Population figures used in the criminal tables represent the 18-year-old-plus state population. If all other factors (court jurisdiction, case definition, unit of count, etc.) are similar, the filed-per-unit-of-population statistic will permit direct comparisons among states of the number of filed cases.

Limitations on use:

In Table 22 only STATE TOTALS can be compared in those states where more than one court handles preliminary hearings. Comparisons can be made between the data reported for a state with an individual court that has exclusive jurisdiction and the STATE TOTALS for states where more than one court has jurisdiction. Comparisons should be avoided for states not reporting data for one or more courts that have jurisdiction over the case type.

Comparisons should be made only between those cases that use the same unit of count for counting criminal cases.

It should also be noted that any change(s) in the caseload of a court may not indicate a change in the actual "offense-rate" within a state, but may merely reflect changes in the criminal code, law enforcement policies and/or citizen reporting rates--among other things. These data should only be used for court management measures.

TABLE 21: Criminal appeals caseload for state trial courts, 1984.

State and court title	Unit of court	Filed	Disposed	Disposed as percent of filed	Filed (disposed) per 100,000 population
COMPLETE STATE DATA					
Exclusive court jurisdiction:					
Arizona--Superior Court	4-A	1,841	1,754	95%	84

North Dakota--District Court	2-A	2	3	150%	1

Note: All available data that are at least 90% complete are in this table. Blank spaces indicate that either the data were unavailable or less than 90% complete, or that the calculations are inappropriate. States included under "incomplete state data" may present data from only one of several courts with this jurisdiction. States omitted from this table did not specifically report criminal appeals in the trial courts. State courts with the jurisdiction can be identified in the state court system charts located in Part III of this Report.

- Criminal case unit of count codes:**
 Contents of case (number of defendants/number of charges):
1. Single defendant/single charge
 2. Single defendant/single incident
 3. Single defendant/single incident (maximum number of charges)

4. Single defendant/one or more incidents
5. Single defendant/varies with prosecutor
6. One or more defendants/single charge
7. One or more defendants/single incident
8. One or more defendants/single incident (maximum number of charges)
9. One or more defendants/one or more incidents
10. One or more defendants/varies with prosecutor
11. Varies with prosecutor/varies with prosecutor

Point at which case is counted:

- A. At the filing of the information or indictment
- B. At the filing of the information or complaint
- C. At the filing of the complaint (warrant or accusation)
- D. At the assigning of a docket number
- E. At the arraignment (first appearance)

TABLE 21: Criminal appeals caseload for state trial courts, 1984. (continued)

ⁱData are incomplete:

Maryland Circuit Court--Total criminal appeals does not include some cases included in the unreported category.

Michigan Circuit Court--No data were available for Hillsdale, Osceola, Kalkaska, or Delta counties.

Virginia Circuit Court--Criminal appeals disposition figure does not include felony appeals from the Juvenile and Domestic Relations Court. These are included in felony dispositions.

Nebraska District Court--Criminal appeals data include civil appeals. Statements in the Annual Report indicate that more than half were criminal appeals.

Rhode Island Superior Court--Criminal appeals figures include misdemeanor and DWI/DUI cases.

Virginia Circuit Court--Criminal appeals disposition figures include misdemeanor cases and appeals of misdemeanor cases.

^jExplanation of data included in the category:

Idaho District Court--Criminal appeals include sentence review only and postconviction remedy proceedings.

TABLE 22: Preliminary hearing proceedings for state trial courts, 1984. (continued)

State and court title	Unit of Count	Filed	Disposed	Disposed as percent of filed	Filed (disposed) per 100,000 population
INCOMPLETE STATE DATA:					
Arkansas--Municipal Court	1-C	1,947 ⁱ	1,947 ⁱ	100% ⁱ	115 ⁱ
Colorado--County Court	4-C	5,167	5,167	100%	223
Michigan--District Court	2-C	36,939 ⁱ	36,939 ⁱ	100% ⁱ	561 ⁱ
New York--Criminal Court of the City of New York	9-D	28,516	28,516	100%	214
District Court	2-C	2,650	2,650	100%	20
Oregon--District Court	5-B	12,517 ^j	12,285 ^j	98% ^j	637 ^j
Utah--Circuit Court	9-A	5,699	5,699	100%	555
Washington--District Court	3-C	4,386 ^{i,j}			138 ^{i,j}
Wyoming--County Court	9-B	574	574	100%	164

Note: All available data that are at least 90% complete are included in the table. Blank spaces indicate that either the data are unavailable or less than 90% complete, or the calculations are inappropriate. States included under "incomplete state data" may present data from only one of several courts with this jurisdiction. States omitted from this table either do not have preliminary hearings, or did not specifically report preliminary hearings. State courts with this jurisdiction can be identified in the state court system charts located in Part III of this Report.

Farmington, Humnoko, Mountainburg, Ash Flat, Bryant, Clinton, Crossett, Dermott, DeValis Bluff, Endora, Fordyce, Lake Village, Lake City, Mammoth Spring, Marshall, Osceola, Siloam Springs, Magnolia, Russellville, and Star City. Michigan District Court--District Courts in the cities of Dearborn, Lincoln Park, Romulus, and East Lansing did not report data. Washington District Court--One court did not submit any data during 1984, and one other did not submit all reports.

^jExplanation of data included in the category: Arizona Justices of the Peace--Preliminary hearings include limited felony cases. Delaware Court of Common Pleas--Preliminary hearings include some limited felony cases. Idaho District Court--Preliminary hearings include some limited felony cases. Kentucky District Court--Preliminary hearings include limited felony cases. Nebraska County Court and Municipal Court--Preliminary hearings include limited felony cases. New Mexico Magistrate Court and Bernalillo County Metropolitan Court--Preliminary hearings include limited felony cases. North Carolina District Court--Preliminary hearings include limited felony cases. North Dakota County Court--Preliminary hearings include limited felony cases. Oregon District Court--Preliminary hearings include limited felony cases. Philadelphia Municipal Court, Pennsylvania--Preliminary hearings include limited felony cases. Pittsburgh City Magistrates Court, Pennsylvania--Preliminary hearings include limited felony/misdemeanor and limited DWI/DUI cases. South Dakota Circuit Court--Preliminary hearings include limited felony cases. Virginia District Court--Preliminary hearings include limited felony cases. Washington District Court--Preliminary hearings include limited felony cases. West Virginia Magistrate Court--Preliminary hearings include limited felony cases.

- Criminal case unit of count codes:**
 Contents of case (number of defendants/number of charges) - Point at which case is counted
- Contents of case:
1. Single defendant/single charge
 2. Single defendant/single incident
 3. Single defendant/single incident (maximum number of charges)
 4. Single defendant/one or more incidents
 5. Single defendant/varies with prosecutor
 6. One or more defendants/single charge
 7. One or more defendants/single incident
 8. One or more defendants/single incident (maximum number of charges)
 9. One or more defendants/one or more incidents
 10. One or more defendants/varies with prosecutor
 11. Varies with prosecutor/varies with prosecutor
- Point at which case is counted:
- A. At the filing of the information or indictment
 - B. At the filing of the information or complaint
 - C. At the filing of the complaint (warrant or accusation)
 - D. At the assigning of a docket number
 - E. At the arraignment (first appearance)

ⁱData are incomplete:
 Arkansas Municipal Court--The following courts did not report or reported partially: Alma, Crawfordsville,

TABLE 23: Criminal jury and non-jury trial dispositions by case type, 1984.

Sources of data are found in Appendix B.

Variations in court organization and subject matter jurisdiction:

The "+" symbol under the heading "case type" indicates what case types were reported for each piece of trial data. An "o" symbol indicates that the reported figures do not include that case type. Jury trial dispositions can only be compared for the same kinds of cases. Both general jurisdiction and limited jurisdiction courts are included.

Variations in counting both cases and trials:

The criminal unit of count and jury trial definition are indicated for each court. Caseload cannot be compared among courts that do not count cases in the same way or at the same time.

Appropriate analyses:

All percentage calculations that were less than 1% but greater than .5% have been rounded up to 1%. All percentage calculations that are greater than 0% but less than .5% are displayed as a <1%.

Trials as a percent of dispositions.
Dividing the number of trials conducted by the total number of cases disposed of for the appropriate case type results in the trial rate for that case type for the court.

Jury trials as a percent of dispositions.
Dividing the number of jury trials conducted by the total number of cases disposed of for the appropriate case type results in the jury trial rate for that case type for the court.

Jury trials as a percent of trials. Dividing the number of jury trials by the total number of trials conducted for that case type results in the proportion of trials that are trials by jury for that case type for the court.

Limitations on use:

Comparisons on these tables must be restricted to the court level, and must be controlled for case type, unit of count, and trial definitions. State totals have not been computed in order to avoid any temptation to compare "apples and oranges."

An example of the problems of comparing these data is given below. Each court that reports trial data for felony cases as a separate category is listed, followed by the symbols for the unit of count used, the point of counting cases, and the trial definition. Among those courts reporting felony trial data, only the five courts numbered 1, in the last column report data that can be compared strictly. Those five courts use the same unit of count and the same jury trial definition when reporting their data.

<u>Felony</u>	<u>Unit of count</u>	<u>Jury trial definition</u>	<u>Caseloads that can be compared</u>
CT - Superior Court	2-A	A	1
DC - Superior Court	2-B	A	
ID - District Court	4-C	A	
IL - Circuit Court	7-A	C	
KS - District Court	2-E/A	A	1
NJ - Superior Court	2-B	C	
NC - Superior Court	2-A	A	1
OH - Ct. of Com. Pl.	2-E	A	
OK - District Court	9-B	A	
OR - Circuit Court	5-B	A	
SD - Circuit Court	2-A	A	1
TX - District Court	2-A	A	1
WV - Circuit Court	9-A	A	
WI - Circuit Court	4-E	A	
VT - District Court	4-E	C	

Care should also be taken to compare only those courts that share similar rules regarding the availability of jury trials. For example, some states make it more difficult for a criminal defendant to waive a jury trial than other states.

TABLE 23: Criminal jury and non-jury trial dispositions by case type, 1984.

Note: All available data that are 90% or more complete are entered in the table. Blank spaces indicate that the data are unavailable or less than 90% complete, or that the calculations are inappropriate. States omitted from this table did not specifically report criminal trial data in sufficient detail. State courts with the possibility of jury trials can be identified in the state court system charts located in Part III of this Report.

-- = Not applicable.
 + = Data are given for these case types.
 o = Data do not include these case types.

Trial definitions:
 A = A jury trial is counted at jury selection, empaneling or swearing in.
 B = A jury trial is counted at introduction of evidence or swearing of first witness.
 C = A jury trial is counted at verdict or decision.

Criminal case unit of count codes:
 Contents of case (number of defendants/number of charges):
 1. Single defendant/single charge
 2. Single defendant/single incident
 3. Single defendant/single incident (maximum number of charges)
 4. Single defendant/one or more incidents
 5. Single defendant/varies with prosecutor
 6. One or more defendants/single charge
 7. One or more defendants/single incident
 8. One or more defendants/single incident (maximum number of charges)
 9. One or more defendants/one or more incidents
 10. One or more defendants/varies with prosecutor
 11. Varies with prosecutor/varies with prosecutor

Point at which case is counted:
 A. At the filing of the information or indictment

Table 23: Criminal jury and non-jury trial dispositions by case type, 1984. (continued)

<p>B. At the filing of the information or complaint C. At the filing of the complaint (warrant or accusation) D. At the assigning of a docket number E. At the arraignment (first appearance)</p>	<p>Municipal Court of Marion County--Combined case types include ordinance violations. Missouri--Circuit Court--Total includes ordinance violations for which jury trials were demanded in the Municipal Division. New York--Criminal Court of the City of New York--Data include limited felony cases. North Carolina--District Court--Total criminal includes ordinance violations and limited felony cases. North Dakota--District Court--Total criminal data include sentence review only and postconviction remedy proceedings. Ohio--Municipal Court--Misdemeanor data include ordinance violations. County Court--Misdemeanor data include ordinance violations. Oklahoma--District Court--Felony cases include some miscellaneous criminal cases. Misdemeanor cases include ordinance violations. Pennsylvania--District Justice Court--Misdemeanor data include some ordinance violation cases. Puerto Rico Superior Court--Criminal appeals are included in case type data. South Dakota--Circuit Court--Total trial figure includes some hearings. Utah--Circuit Court--Criminal data include limited felony cases, and postconviction remedy proceedings. Vermont--District Court--Misdemeanor data include ordinance violations. Virginia--Circuit Court--Felony data include criminal appeals from the Juvenile and Domestic Relations Court. Misdemeanor data include some ordinance violations.</p>
<p>i Data are incomplete: Connecticut--Superior Court--Felony cases do not include some Part D felonies reported in the following line of this table. Florida--Circuit Court and County Court--Dispositions of reopened cases are not included. Hawaii--Circuit Court--Reopened cases are not included. Iowa--District Court--Some misdemeanors are included in the traffic caseload. Texas--District Court--Non-jury criminal trial data do not include guilty pleas accepted during a bench trial. Wisconsin--Circuit Court--DWI/DUI caseload does not include DWI/DUI cases from Milwaukee County. Wyoming--District Court--Sublette County reported data for only 6 months.</p>	
<p>j Explanation of data included in the category: California--Justice Court and Municipal Court--Misdemeanor includes felonies reduced to a misdemeanor preliminary hearings and some ordinance violations. Idaho--District Court--Misdemeanor cases include ordinance violations. Illinois--Circuit Court--Felony cases include preliminary hearings for courts downstate. Indiana--County Court--Felony and misdemeanor figures include ordinance violations.</p>	

TABLE 24: Criminal disposition types for state trial courts, 1984.

Sources of data are found in Appendix B.

Variations in court organization and subject matter jurisdiction:

This table displays data for the general jurisdiction and limited jurisdiction courts that report manner-of-disposition data that are at least 90% complete. Some jurisdictions may also show a disproportionately larger criminal caseload than others because ordinance violations cannot be separated from the criminal caseload (indicated by a "j" footnote). In the CSIM classification scheme, ordinance violations should be reported with the traffic/other violations caseload.

The "+" symbol under the heading "case types" indicates what case types are reported for each data element. An "o" symbol indicates that the reported figures do not include that case type. Types of dispositions can only be compared for the same types of cases.

Variations in definitions:

This table indicates the various units used in counting cases from state to state. Total criminal dispositions can be compared only among those states using the same unit of count.

Only a few states report sufficiently complete data to make inter-state comparisons of the proportion of total caseload disposed by each manner of disposition possible.

Even in those jurisdictions that report manners of disposition, the distinctions between manners of disposition are not as detailed as one would prefer. For example, bail/bond forfeitures have been lumped with guilty pleas in this table because few jurisdictions separate them--the same is true of nolle prosequi and dismissed.

There are also a number of manner of disposition categories reported by the states (some of them fairly substantial) that fit only into an unclassified category in the CSIM classification scheme, for example, transfers.

These do not appear at all on this table, so that the total manners of disposition may not add up to total dispositions, nor do the percentages add up to 100%.

Appropriate analyses:

All percentage calculations that were less than 1% but greater than .5% have been rounded up to 1%. All percentage calculations that are greater than 0% but less than .5% are displayed as <1%.

Number and percent of total dispositions for each manner of disposition. Dividing the number of cases for each manner of disposition by the total number of cases disposed results in the proportions of cases disposed by each manner of disposition. These figures can be compared between courts that count cases in the same way (i.e., the same unit of count).

Limitations on use:

The distribution of the proportions of cases by different manners of disposition is affected by the method used for counting cases in the court. Dismissals will make up a higher percentage of dispositions in those courts basing case count on charges than those counting defendants. Before making comparisons between states and courts, be sure that they both use a similar unit of count.

The distribution is also affected by the order with which procedures are carried out by the court and the prosecutor. The proportion of dismissals will be lower in courts that screen cases before filing them than in courts that screen cases after they are filed.

In addition, a dismissal in one state may not mean the same as a dismissal in another state. For example, some states may distinguish between dismissals by prosecutors and by judges, while others may treat them as the same.

TABLE 24: Criminal disposition types for state trial courts, 1984.

State and court title	Unit of count	Case types						Total criminal dispositions	Total plea/bail forfeiture, etc.	
		Ltd. felony	Tri. felony	Misdemeanor	DWI/DUI	Appeal	Misc. Crim.		Number	As percent of disposed

Note: All available data that are 90% complete are entered in this table. Blank spaces indicate that the data are unavailable, or less than 90% complete, or the calculations are inappropriate. Percentages of the various disposition types do not sum to 100% due to missing disposition types like "other" and "transfer." Reported data may include non-criminal cases when they could not be separated from the criminal data (e.g., ordinance violation cases).

-- = Not applicable
 + = Data are given for these case types.
 o = Data do not include these case types.

Criminal case unit of count codes:
 Contents of case (number of defendants/number of charges) - Point at which case is counted
 Contents of case:
 1. Single defendant/single charge
 2. Single defendant/single incident
 3. Single defendant/single incident (maximum number of charges)
 4. Single defendant/one or more incidents
 5. Single defendant/varies with prosecutor
 6. One or more defendants/single charge

- 7. One or more defendants/single incident
- 8. One or more defendants/single incident (maximum number of charges)
- 9. One or more defendants/one or more incidents
- 10. One or more defendants/varies with prosecutor
- 11. Varies with prosecutor/varies with prosecutor

- Point at which case is counted:
 A. At the filing of the information or indictment
 B. At the filing of the information or complaint
 C. At the filing of the complaint (warrant or accusation)
 D. At the assigning of a docket number
 E. At the arraignment (first appearance)

[†]Data are incomplete:
 Hawaii--Circuit Court--Criminal caseload does not include reopened prior cases.
 District Court--Criminal caseload does not include some misdemeanors which are included with traffic.
 Indiana--City Court and Town Court--Criminal caseload does not include some unidentified cases.

North Carolina--District Court--Total does not include trial convictions.
 Ohio--Municipal Court--Total does not include trial convictions.
 Oklahoma--District Court--Total does not include trial convictions.
 Pennsylvania--Court of Common Pleas--Miscellaneous appeals are not included.
 South Dakota--Circuit Court--Misdemeanor data does not include Class 2 misdemeanors (disorderly conduct, prostitution, gambling, some appeals, some ordinance violations, and contested parking).

Missouri--Circuit Court--Criminal caseload include those ordinance violations that demanded jury trials from the municipal judges.
 New Jersey--Municipal Court--Figures include ordinance violations. Acquittals include "dismissals and finding of not guilty."
 New York--District Court and City Court--Criminal data include ordinance violations cases.
 Ohio--Municipal Court and County Court--Misdemeanor data include ordinance violations.
 Pennsylvania--District Justice Court--Felony data include some ordinance violations cases.
 Utah--District Court--Total number of dispositions is the number of charges not cases.
 Vermont--District Court--Misdemeanor data include ordinance violations cases.
 Virginia--Circuit Court--Misdemeanor data may include a few ordinance violations.

^jExplanation of data included in the category:
 California--Justice Court and Municipal Court--Limited felony includes preliminary hearings. Misdemeanor includes some ordinance violations cases. Trial convictions include cases bound over.
 Illinois--Circuit Court--Misdemeanor data include preliminary hearings.
 Indiana--County Court--Criminal caseload includes ordinance violations cases.
 Kansas--District Court--Misdemeanor data include ordinance violations cases.

TABLE 25: Ordinance violation caseload for state trial courts, 1984.

Variations in court organization and subject matter jurisdiction:

Caseload in this table is from both general jurisdiction and limited jurisdiction courts. The same case types may be handled in different courts from state to state. The court system charts in Part III should be consulted for a brief summary of the jurisdiction of each court.

To facilitate comparisons, the states in these tables have been grouped into three categories: those states where a court has exclusive jurisdiction over a case type and where it reported complete data; those states where more than one court handles a case type and each court submitted complete data; and those states where data from any one of the courts with that case type jurisdiction are incomplete.

Sources of data are found in Appendix B.

Variations in case classification and definitions:

This is the second year that ordinance violations have been extracted from the criminal caseload. They are now counted with traffic/other violation cases in order to leave only the more important criminal cases in the criminal caseload. The case categories and the data classified in the case categories, however, vary from state to state.

Because such problems exist for these and all other case categories, the case types used in this Report are those chosen for inclusion in the State Court Model Annual Report and State Court Model Statistical Dictionary.

Even with use of the model case types, however, caseloads are not comparable if state statutes vary as to the types of criminal cases classified as local ordinance violation or state misdemeanors. Certain fish and game offenses, for example, may be ordinance violations in one state but misdemeanors in another.

Only states reporting data that could be displayed in the specific case types are included in the tables, and then only if the data are at least 90% complete. Many courts do not break data down beyond the broad civil, criminal, traffic, and juvenile categories.

Appropriate analysis:

All percentage calculations that were less than 1% but greater than .5% have been rounded up to 1%.

Disposed cases as percent of filed. This measure represents the percent of filed cases disposed by the court. The percent is computed

by dividing the number of cases disposed of by the number filed, and then multiplying by one hundred. A percent over one hundred indicates that the court disposed of more cases than were filed, thus reducing pending caseload. A percent significantly less than one hundred indicates that the court is not keeping up with the volume of cases being filed. This measure was not computed if the filing and disposition data were not comparable.

Filed (disposed) per 100,000 population. The unit of state population used on all court caseload charts is 100,000. Filings per 100,000 population compensates for variations in state population and gives a more realistic basis for comparison of caseloads among states of various sizes. If the number of filings was not available but the number of dispositions was available, the number of cases disposed per unit of population was entered in this column in place of the number of cases filed per population unit, and the use of this alternative quantity was indicated by enclosing it in parentheses. Population figures used in the criminal tables represent the 18-year-old-plus state population. If all other factors (court jurisdiction, case definition, etc.) are similar, the filed-per-unit-of-population statistic will permit direct comparisons among states of the number of filed cases.

Limitations on use:

Only STATE TOTALS can be compared in those states where more than one court has jurisdiction over the case type. Comparisons can be made between the data reported for a state with an individual court that has exclusive jurisdiction over the type of case, and the STATE TOTALS for states where more than one court has jurisdiction. Comparisons should be avoided for states not reporting data for one or more courts that have jurisdiction over the case type. The data that could be included in this table, however, are so limited that few comparisons are possible. Many states do not count their ordinance violations separately from their criminal caseload. Others do not report ordinance violations at all.

It should also be noted that any change(s) in the caseload of a court may not indicate a change in the actual "offense-rate" within a state, but may merely reflect changes in the criminal code, law enforcement policies and/or citizen reporting rates--among other things. Consequently, these data are useful for little more than court management measures.

TABLE 25: Ordinance violation caseload for state trial courts, 1984.

State and court title	Filed	Disposed	Disposed as percent of filed	Filed (disposed) per 100,000 population
COMPLETE STATE DATA				
Exclusive court jurisdiction:				
District of Columbia--Superior Court	5,048	4,852	96%	810

Wisconsin--Circuit Court	48,945	48,585	99%	1,027
Wyoming--County Court	1,582			310

Note: All available data that are at least 90% complete are entered in the table. Blank spaces indicate that either the data are unavailable or less than 90% complete, or that the calculations are inappropriate. States included under "incomplete state data" may present data from only one of several courts with this jurisdiction. States omitted from this table did not specifically report ordinance violations. State courts with this jurisdiction can be identified in the state court system charts identified in the state court system charts located in Part III of this Report.

ⁱData are incomplete:

- California Municipal Court--Some ordinance violations are included in the misdemeanor caseload.
- California Justice Court--Some ordinance violations are included in the misdemeanor caseload.
- Florida County Court--Ordinance violation disposition data include only new cases not reopened cases.

Indiana City Court and Town Court--All data are incomplete, due to cases reported in the grand total but not identified by case category.

Pennsylvania District Justice Court--Some ordinance violations are included in the misdemeanor caseload.

Washington District Court--One court did not report any data during 1984, and one other did not submit all reports.

Washington Municipal Court--Two courts did not report any data during 1984.

^jExplanation of data included in the category:

Hawaii District Court--Ordinance violations include some misdemeanor cases.

Iowa District Court--Ordinance violations include some miscellaneous traffic cases.

South Carolina Municipal Court--Ordinance violations include parking meter violations.

Utah Circuit Court--Ordinance violations include some miscellaneous criminal cases.

Washington Municipal Court--Ordinance violations include some misdemeanor cases.

FIGURE G: Juvenile unit of count used in state trial courts, 1984.

The National Juvenile Information Systems Task Force of the National Council of Juvenile and Family Court Judges recommended to the COSCA CSIS Committee and the CSIM Project that caseload data of courts counting juvenile referrals be separated from the caseload data of courts counting juvenile petitions. This table indicates what each court counts as a case, and when a disposition is counted for statistical purposes.

Additionally, Figure G provides information on the age at which juvenile jurisdiction transfers to adult courts regardless of the

wishes of the juvenile. Future editions of this Figure may provide further understanding of this age dimension to juvenile case processing by identifying the minimum age when petitions may be filed to transfer a case to adult courts.

This information has been obtained by CSIM Project staff from the administrative office of the courts in each state and is part of the 1984 State Trial Court Jurisdiction Guide for Statistical Reporting. The CSIM Project case categories on Tables 27, 28, and 29 are arranged according to the differences in reporting juvenile cases as outlined in Figure G.

X = This court has jurisdiction in this case type.

Source: 1984 State Trial Court Jurisdiction Guide for Statistical Reporting.

TABLE 26: Criminal-type juvenile petition caseload for state trial courts, 1984.

TABLE 27: Child-victim petition caseload for state trial courts, 1984.

TABLE 28: Status petition caseload for state trial courts, 1984.

Variations in court jurisdiction and subject matter jurisdiction:

Caseload in these tables is from both general jurisdiction and limited jurisdiction courts, and represents the total caseload reported for each case type from each state. The same case type may be handled in different courts from state to state. The court system charts in Part III of this Report should be consulted for a brief summary of the jurisdiction of each court.

Sources of data are found in Appendix B.

Variations in case classification and definitions:

Case categories and the data classification in the case categories vary from state to state. Since such problems exist for these and all other case categories, the case types used in this Report are those chosen for inclusion in the State Court Model Annual Report and State Court Model Statistical Dictionary.

Only states reporting data that could be displayed in the specific case type are included in the tables, and then only if the data are at least 90% complete. Many courts do not break data down beyond the broad juvenile category.

The volume of juvenile cases cannot be compared across all state courts because the statutory age when a juvenile becomes an adult varies from state to state. This variation affects the volume of both juvenile filings and adult criminal filings. (See Figure G for variations in age, and in point of counting filings and dispositions.)

States do not count juvenile cases in the same way. This table separates those states that count juvenile petitions from those states that count juvenile referrals, a distinction that causes a very substantial difference in caseload. A large proportion of juvenile referrals are resolved and disposed before the

filing of a juvenile petition becomes necessary. In fact, the objective of the intake process is to find an alternative to adjudication. Consequently, the data in the two segments of this table are not comparable.

Appropriate analyses:

Disposed cases as percent of filed. This measure represents the percent of filed cases disposed by the court. The percent is computed by dividing the number of cases disposed of by the number filed and then multiplying by one hundred. A percent over one hundred indicates that the court disposed of more cases than were filed, thus reducing pending caseload. A percent significantly less than one hundred indicates that the court is not keeping up with the volume of cases being filed. This measure was not computed when the filing and disposition data were not comparable.

Filed (disposed) per 100,000 population. The unit of state population used on all court caseload charts is 100,000. Filings per 100,000 population compensates for variations in state population and gives a more realistic basis for comparison of caseloads among states of various sizes. If the number of filings was unavailable but the number of dispositions was available, the number of cases disposed per unit of population was entered in this column in place of the number of cases filed per population unit, and the use of this alternative quantity was indicated by enclosing it in parentheses.

Population figures used in the juvenile tables represent the state population under 18 years of age. If all other factors (court jurisdiction, case definition, age at which a juvenile transfers to an adult court, etc.) are similar, the filed-per-unit-of-population statistic will permit direct comparisons among states of the number of filed cases.

TABLE 26: Criminal-type juvenile petition caseload for state trial courts, 1984.

State and court title	Filed	Disposed	Disposed as percent of filed	Filed (disposed) per 100,000 population
Juvenile cases are counted at the filing of the petition in the following states:				
Arizona--Superior Court	9,217	5,912	64%	1,075

TABLE 26: Criminal-type juvenile petition caseload for state trial courts, 1984. (continued)

Note: Data reported in this table are state totals, unless otherwise indicated. All available data that are 90% or more complete are entered in the table. Blank spaces indicate that the data are unavailable or less than 90% complete, or that the calculations are inappropriate. States omitted from this table did not specifically report criminal-type juvenile petitions. State courts with this jurisdiction can be identified in the state court system charts located in Part III of this Report.

ⁱData are incomplete:
 Maryland Circuit Court and District Court--
 Some delinquency cases are included in the
 "unreported category" of unclassified
 juvenile.

^jExplanation of data included in the category:
 Connecticut Superior Court--Criminal-type
 juvenile petitions include status
 petitions.

Florida Circuit Court--Criminal-type
 juvenile petitions include some
 miscellaneous juvenile cases.
 Guam Superior Court--Juvenile delinquency
 cases include juvenile traffic data.
 Idaho District Court--Criminal-type juvenile
 petitions include status petitions.
 Kansas District Court--Criminal-type
 juvenile petitions include some
 traffic/other violation cases.
 Minnesota County Courts--Juvenile data
 includes cases from the District Court.
 New York Family Court--Criminal-type
 juvenile petitions include juvenile
 traffic cases.
 Rhode Island Family Court--Criminal-type
 juvenile petitions include status
 petitions.

TABLE 27: Child-victim petition caseload for state trial courts, 1984.

State and court title	Filed	Disposed	Disposed as percent of filed	Filed (disposed) per 100,000 population
Juvenile cases are counted at the filing of the petition in the following states:				
Arizona--Superior Court	1,638	2,568	96%	191

Montana--District Court	569 ^j			241 ^j
New Hampshire--District Court	923			366
New York--Family Court	10,937	10,267	94%	249
North Carolina--District Court	2,421	2,377	98%	151
Texas--STATE TOTAL	1,551	1,495	96%	33
District Court	1,071	1,073	100%	23
County Level Courts	480	422	88%	10
Utah--Juvenile Court	4,734			757
Wisconsin--Circuit Court	4,638 ^j	4,555 ^j	98% ^j	363 ^j

Juvenile cases are counted at intake or referral in the following states:

Arkansas--County Court	1,132	1,040	92%	174
District of Columbia--Superior Court	273			202
Georgia--Superior Court and Juvenile Court	5,855	5,689	97%	359
Hawaii--Circuit Court	2,109	2,125	101%	735
Massachusetts--Trial Court of the Commonwealth	3,553			260

Note: Data reported in this table are state totals, unless otherwise indicated. All available data that are 90% or more complete are entered in the table. Blank spaces indicate that either the data are unavailable or less than 90% complete, or that the calculations are inappropriate. States omitted from this table did not specifically report status petition cases. State courts with this jurisdiction can be identified in the state court system charts located in Part III of this Report.

ⁱData are incomplete:
Maryland Circuit and District Court--Some cases are found in the "unreported category" under unclassified juvenile.

^jExplanation of data included in the category:
Iowa District Court--Status petition filings include child-victim petitions.
Minnesota County Court--Figure includes data from District Court.
Montana District Court--Status petitions include criminal-type petitions.
Wisconsin Circuit Court--Status petitions include child-victim petitions.

TABLE 29: Traffic/other violation disposition types for state trial courts, 1984.

Sources of data are found in Appendix B.

Variations in court organization and subject matter jurisdiction:

This table displays data for the general jurisdiction and limited jurisdiction courts that report manner-of-disposition data for traffic/other violation cases.

The length of the table is an indication of the difficulty of aggregating traffic and ordinance violations into uniform case categories. In many states, ordinance violations cannot be separated from the criminal caseload. A few jurisdictions fail to count or report ordinance violations in their caseloads.

The traffic violation caseload varies according to whether a jurisdiction handles parking violations. Even when the court has jurisdiction, many of them do not count or report uncontested parking cases as part of their traffic caseload. The courts listed in this table are coded to show caseloads that include parking and those that do not.

Variations in definitions:

Only a few states report sufficiently complete data to make between-state comparisons of the proportion of total caseload disposed by each manner of disposition.

Even in those jurisdictions that report manners of disposition, the distinctions between manners of disposition are not clear. For example, some courts lump all their bail/bond forfeitures and fine payments with their guilty pleas, rather than reporting the categories separately.

There are also a number of manner of disposition categories reported by the states

(some of them fairly substantial) that are not displayed on this table, e.g., transfers. These do not appear at all on this table, so that the total manners of disposition do not add up to total dispositions, nor do the percentages add up to 100%.

Appropriate analyses:

All percentage calculations that were less than 1% but greater than .5% have been rounded to 1%. All percentage calculations that were greater than 0% but less than .5% are displayed as <1%.

Number and percent of total dispositions for each manner of disposition. Dividing the number of cases for each manner of disposition by the total number of cases disposed results in the proportions of cases disposed by each manner of disposition.

Traffic/ordinance violation cases are generally counted at approximately the same point in case processing. The unit of count varies and only those courts that count cases in the same way have comparable caseloads.

Limitations on use:

The distribution of the proportions of cases is affected by the order with which procedures are carried out by the court and the prosecutor. The proportion of dismissals will be lower in courts that screen cases before filing them, than in courts that screen cases after they are filed.

In addition, a dismissal in one state may not mean the same as a dismissal in another state. For example, some states may distinguish between dismissals by prosecutors and by judges, while others may treat them as the same.

TABLE 29: Traffic/other violation disposition types for state trial courts, 1984.

State and court title	Park- ing	Total traffic dispositions	Plea		Bail or bond forfeiture/ or Violations Bureau*		Trial conviction	
			Number	As percent of dis- posed	Number	As percent of dis- posed	Number	As percent of dis- posed

Texas--County-Level Courts ...	NPJ	71,803 [†]	11,414 [†]	16% [†]			142 [†]	1% [†]
Utah--Circuit Court	P	568,676 [†]	449,238 [†]	79% [†]			9,861 [†]	2% [†]

Note: Blank spaces indicate that either the data are unavailable or less than 90% complete, or that the calculations are inappropriate. State courts with traffic/other violation jurisdiction can be identified in the state court system charts located in Part III of this Report.

Unit of count:

Unless otherwise indicated, the unit of count is single defendant/single incident, and is counted at the filing of the complaint.

**Hawaii District Court--Single defendant/most serious charge.

**Indiana--One or more defendants/single incident.

**North Dakota--Single defendant/number of charges vary.

**Puerto Rico--Single defendant/single charge.

P = Reported data include contested and uncontested parking cases.

CP = Reported data include contested, but not contested parking cases.

NPJ = No parking jurisdiction.

*Violations Bureau dispositions: These cases were disposed by a Violations Bureau, usually with just the payment of a fine. In the Texas Justice of the Peace Court and Municipal Court these are called payment of fine dispositions. The figures for the Vermont District Court are cases referred to the Department of Motor Vehicles.

[†]Data are incomplete:

California--Justice Court--Some traffic and ordinance violations cases are reported as misdemeanors in the criminal caseload. Municipal Court--Figures do not include all ordinance violations.

Table 29: Traffic/other violation disposition types for state trial courts, 1984. (continued)

State and court title	Total conviction		Acquittal		Dismissal/Nolle prosequi

Hawaii--Circuit Court--Figures do not include reopened prior cases.

Indiana--City Court and Town Court--Figures do not include a small number of cases not identified by case category.

County Court--Figures do not include a small number of cases not identified by case category.

Kansas--District Court--Figures do not include juvenile traffic cases.

North Dakota--County Court--Figures do not include parking cases.

Puerto Rico--District Court--Data do not include ordinance violations.

^jExplanation of data included in the category:
California--Justice Court--Figures include DWI/DUI.

Municipal Court--Figures include DWI/DUI cases.

District of Columbia--Superior Court--Figures include DWI/DUI cases.

Hawaii--District Court--Figures include some misdemeanor cases.

North Dakota--County Court--Convictions and guilty pleas figures cannot be separated.

South Dakota--Circuit Court--Figures include some misdemeanors in total.

Texas--County-Level Courts--Figures include traffic appeals.

Utah--Circuit Court--Figures include some miscellaneous criminal cases. Guilty plea/bail forfeiture/no contest data are combined.

TABLE 30: Traffic/other violation total trials and jury dispositions, 1984.

Sources of data are found in Appendix B.

Variations in court organization and subject matter jurisdiction:

Table 31 includes all available traffic/other violation data for both general and limited jurisdiction courts.

Variations in case classifications and definitions:

The case types in this table include moving traffic violations, miscellaneous traffic violations, and ordinance violations. Additionally, those courts which have parking cases included are indicated with a "P" or "CP" in the parking column. The caseload of these courts cannot be compared with those which do not report parking or have parking jurisdiction. DWI/DUI cases are not included unless they are indicated by a "j" footnote, and courts with DWI/DUI cases reported with their data cannot be compared with those that do not.

Variations in counting both cases and trials:

The definitions used by each court to count cases and trials are indicated in this table. Comparisons can only be made between courts that count cases and trials in the same way.

Appropriate analyses:

All percentage calculations that were less than 1% but greater than .5% have been rounded up to 1%. All percentage calculations that are

greater than 0% but less than .5% are displayed as a <1%.

Trials as a percent of dispositions.
Dividing the number of trials by the total number of cases disposed for the appropriate case type, results in the trial rate for that case type.

Jury trials as a percent of dispositions.
Dividing the number of jury trials by the total number of cases disposed, for the appropriate case type, results in the jury trial rate for that case type.

Jury trials as a percent of trials. Dividing the number of jury trials by the total number of trials for that case type results in the proportion of trials that are trials by jury for that case type.

Limitations on use:

Comparisons of these tables must be restricted to the court level, and must control for case type, case count, and trial definition.

For example, the caseload in the Arizona and Florida court(s) can be compared, and Colorado, the District of Columbia, Hawaii, and Kansas can also be compared.

Care should also be taken to compare only those courts that share similar rules regarding the availability of jury trials. For example, some states make it more difficult for a criminal defendant to waive a jury trial than other states (this qualification has not yet been incorporated in the database).

TABLE 30: Traffic/other violation total trials and jury dispositions, 1984.

State and court title	Park- ing	Unit of count	Jury trial defini- tion	Number of disposi- tions	Number of trials	Trials as a percent of dispo- sitions	Number of jury trials	Jury trials as a percent of dispo- sitions	Jury trials as a percent of trials

Note: All available data that are 90% or more complete are entered in the table. Blank spaces indicate that the data are unavailable, or calculations are inappropriate, or that the data are less than 90% complete. States omitted from this table did not specifically report traffic/other violation data in sufficient detail. State courts with the possibility of jury trials can be identified in the state court system charts located in Part III of this Report.

P = Reported data include contested and uncontested parking cases.
 CP = Reported data include contested, but not uncontested parking cases.
 NPA = No parking data are available.
 NPJ = No parking jurisdiction.
 -- = Not applicable.

Traffic case unit of count:
 Contents of case (number of defendants/number of charges):
 1. Single defendant/single charge
 2. Single defendant/single incident

3. Single defendant/single charge (maximum number of charges)
4. Single defendant/one or more incidents
5. Single defendant/varies with prosecutor
6. One or more defendants/single charge
7. One or more defendants/single incident
8. One or more defendants/single incident (maximum number of charges)
9. One or more defendants/one or more incidents
10. One or more defendants/varies with prosecutor
11. Varies with prosecutor/varies with prosecutor

Point of counting: All of these courts count cases at approximately the same point in case processing.

Trial definitions:
 A = A trial is counted at jury selection, empaneling or swearing in.
 B = A jury trial is counted at the introduction of evidence or swearing of first witness.
 C = A jury trial is counted at verdict or decision.

Table 30: Traffic/other violation total trials and jury dispositions, 1984. (continued)

ⁱData are incomplete:

Arizona--Justice of the Peace and Municipal Court--Figures do not include miscellaneous traffic cases.
California--Justice Court and Municipal Court--Figures do not include all ordinance violation or all moving traffic cases.
Hawaii--Circuit Court--Data do not include reopened prior cases.
Kansas--District Court--Data do not include juvenile traffic cases.

^jExplanation of data included in the category:

Arizona--Justice of the Peace and Municipal Court--Figures include DWI/DUI cases.
California--Justice Court and Municipal Court--Most DWI/DUI cases are included in these figures.

Colorado--County Court--Data include DWI/DUI cases.

District of Columbia--Superior Court--Data include DWI/DUI cases and Capitol Police parking.

Florida--County Court--Data include DWI/DUI cases.

Indiana--Superior Court and Circuit Court--Data include state parking cases.

Iowa--District Court--Data include some misdemeanors.

South Dakota--Circuit Court--Data include some misdemeanor and criminal appeal cases.

Texas--County-Level Courts--Data include traffic appeals cases.

Utah--Circuit Court--Data include some miscellaneous criminal cases.

Wisconsin--Circuit Court--Data include some DWI/DUI cases.

Part II
Trend charts

Part II Trend charts

Questions about the "litigation explosion" in the state trial courts are among those most frequently received by CSIM Project staff. These questions originate from court administrators, judges, attorneys, the research community, the business community, and the media. Part II of this 1984 Annual Report is a preliminary effort to shed some light on the question, "Is there a 'litigation explosion' (defined as the number of filings) in the state trial courts?"

Dates chosen for trend data.

The years 1981 and 1984 were chosen as two of the data points for these tables because the State Trial Court Jurisdiction Guide for Statistical Reporting was first applied to the 1981 trial court data, and the 1984 data is the most recent available (Data for 1982 and 1983 have not yet been translated into comparable terms due to limited resources). Since 1981 and 1984 represent a three-year interval, an earlier three-year interval was needed to bring balance to the trend line. Therefore, the first point chosen was 1978.

Case types selected for analysis.

When talking of a "litigation explosion," most people reference an increased propensity, in the mindset of individuals, to sue for damages and punitive awards. Some of the CSIM case types that address this issue are tort, contract, and real property rights cases.

In addition, small claims procedures are easily accessible, relatively inexpensive to file and work within, provide a comparatively speedier disposition of justice, and are therefore a more interesting measure of the public's propensity to litigate. Additionally, small claims consist of tort, contract, and real property rights cases handled, in limited jurisdiction courts. Studying small claims also facilitates a comparison of limited and general jurisdiction courts regarding the frequency of formal litigation.

These case categories were chosen because they have, over the years, been reported separately, by many courts, without having any other minor case types included in their totals. The same is not true of other case categories, such as domestic relations, where subcategories are often reported with juvenile cases, miscellaneous, or special civil proceedings.

Criminal cases do not reflect on the "litigation explosion" as it is defined above; however, felonies are included in these trend data to provide a more complete picture of the courts' workloads over time.

The first table presents the general picture by displaying data for the combined category of tort, contract, and real property rights cases. This table is followed by a table for small claims. The final two civil tables break down the general table into one for tort, and one for contract cases. There were insufficient data, over the seven year period to justify compilation of a table for real property rights cases. The final table evaluates trend data for felony cases.

Population as an indicator of caseload changes.

Earlier volumes in this Annual Report series have documented that the single best predictor of

civil filings in state courts is the total state population. Total population explained over 90% of the variance in civil filings among the state courts. Therefore, the percentage increase in state population has been included in these tables for all three time periods--1978-1981, 1981-1984, and 1978-1984 in order to explain, at the outset, what kind of case filing increases might be anticipated as a result of changes in the state populations.

At this point, it is not possible to accurately predict what percentage increase in filings one would expect for every percent increase in the population. Therefore, for purposes of this Report, a rough one to one relationship has been assumed, i.e., for every percent increase in population, at least a one percent increase in filings would be expected.

Courts included in the tables

Some state courts do not appear in these tables for a variety of reasons: they do not report statewide data at all, they do not provide sufficient detail to identify the case types reported in these tables, they have changed reporting categories over time, and finally, the jurisdiction and organization of some courts have changed so dramatically between 1978-84 that their data were not comparable. Therefore, the courts displayed on the following tables do not include complete nationwide data; however, they are representative of general jurisdiction courts in this country, and are adequate for addressing the issue of whether there is a litigation explosion. For example, Table 32, on small claims, has statewide data from 33 states from across all geographical regions, and from large and small states. Although Tables 31 and 33-35 do not have as much complete state data as does Table 32, the data are more often than not from general jurisdiction courts. Since these are the courts most likely to hear the serious cases, these courts complement the small claims data found in Table 32.

Summary statistics presented on the facesheets.

Three summary measures. Each of Tables 31-35 display the number of filings for the years 1978, 1981 and 1984, and the percent changes in total state populations and filings for each of the three time periods 1978-81, 1981-84 and 1978-84. The accompanying facesheet for each table summarizes the data presented in each table using the following three measures: (1) the aggregate data contained in the table for those courts that reported complete data for each of the three years; (2) a summary description of how many courts experienced increased or decreased filings for the two periods 1978-1981 and 1981-1984; and (3) a chart which identifies patterns of change, and specifically lists the courts within each pattern.

Patterns across time, the "up-up" and "up-down" patterns. There are two basic patterns that can be used to test crudely whether there continues to be a "litigation explosion." The first group represents those courts whose filings increased during the 1978-81 period, and continued to rise during the 1981-84 period (i.e., and "up-up" pattern). This "up-up" pattern alone, however, does not represent prima facie evidence of a "litigation explosion." This "up-up" category must be separated into three components: (3-a) courts whose upward increases

in both time periods were at approximately the same rate of increase and whose increases significantly exceeded the rate of increases in the total population; (3-b) courts whose filings increased, during 1981-84, at a rate significantly less than the rate they were increasing at during 1978-81--which indicates a slowing of any upward trend that might have occurred during earlier years; and (3-c) courts whose filings increased significantly during the period 1978-81, but whose filings increased at a rate which approximated or was less than the rate at which the population increased during 1981-84. The last component (i.e., 3-c), represents courts where there is not a "litigation explosion," because filings did not increase at a rate equal to or significantly different from population increases. Therefore, the only "up-up" pattern which may indicate unusual increases in filings is a "3-a"--where court filings increased significantly over both periods.

The second major group of courts, which run counter to the "up-up" pattern, are those courts which exhibited significant increases in filings during 1978-81, but whose filings actually decreased during the 1981-84 period (i.e., an "up-down" pattern). Courts that fall into this category are no longer experiencing increases in the number of civil suits.

Other miscellaneous patterns appear sporadically throughout the tables. These can clearly be identified as either supportive, or not supportive of the claim to a "litigation explosion." For example, some courts may not have experienced any significant change in filings for both time periods. On the other hand, filings in some courts went down during the 1978-81 period, and have increased significantly during the latter period. These situations will be discussed as they occur in each of the tables.

Limitations on the data

The data presented on the following tables are the most accurate, reliable, and comprehensive data yet brought to bear on the question of whether there is a "litigation explosion" in the state courts. This is a preliminary look at the topic, however, and the reader should consider the following caveats when evaluating the analysis--none of which are thought to affect general conclusions that can be drawn from these tables: although the data are representative from all the states, they do not include all of the courts and states in the country; due to limited resources, Project staff were unable to complete the trend table for the missing years or identify all jurisdictional changes in those courts over time; the data are only as current as 1984 and changes may have occurred during 1985; the data do not include many other civil case types which may have included different trends during that time period (e.g., divorce, support/custody, adoption, estate, civil appeals, and miscellaneous civil cases); and the findings are restricted to the state courts only.

General findings and explanations

A careful examination of available data relating to tort, contract, real property rights, and small claims cases from a representative group of state courts provides no evidence to

support the often cited existence of a national "litigation explosion" in the state trial courts during the 1981-84 time period.

There are some state courts that have experienced significant increases in the case types described throughout this section, but the impact of that finding is reduced when one realizes that these are the courts in states that have also experienced significant increases in their total populations. Changes in the number of these filings are not attributable to an increase in the propensity of Americans to sue, but rather to a simple increase in the numbers of Americans.

The findings, however, can be extended one further step. Not only is the evidence missing to indicate a significant national increase in filings above the increase in population, but a clear pattern emerges which generally supports the "up-down" model described earlier. In a significant number of state courts, selected civil filings have decreased between the period 1981-1984 (see the individual tables for specific details).

It may be that there was a litigation explosion that peaked around 1981. The evidence from these charts tends to support that observation. There were significant increases in filings between 1978-81, far exceeding the increases in population. In fact, the increases were so large during 1978-81, that despite the decreases that occurred during 1981-84, the percentage changes from 1978-84 are still showing moderate increases.

The "litigation explosion" has several dimensions, and the often cited myth of a continuing upward trend of civil lawsuits in the state courts could result from confusing the number of new filings with the other dimensions of the problem: (1) intensive media focus on the enormous "size of the awards" in a few selected and well publicized civil cases; and (2) increased workload in the courts, not caused by an increase in the rate of civil lawsuits, but by "more complex cases," and perhaps fewer resources available to the courts to handle expected increases in filings which results in larger backlogs. This Report does not reflect on the "size of awards," or the impact of "case complexity" on court workload.

Additionally, there are a variety of potential explanations for the leveling off or decreases in civil suits: (1) The public's attitude toward lawsuits may be changing. People may be deterred from filing as a result of concerns about costs and civil litigation that is likely to take years--except for the more serious cases, it may not be worth the effort; (2) For years people speculated that greater numbers of laws resulted in increased litigation to interpret those laws--this testing of new legislation and judicial rules may have run its course; and (3) Finally, insurance companies and attorneys may be increasing their efficiency in settling conflict before cases reach the courts. The existence of any litigation explosions has been cyclical, and there is no evidence to support the notion of a consistent nationwide increase in lawsuits in the state trial courts between 1981-84.

TABLE 31: Trend data for state courts that specifically reported tort, contract, and real property rights case filings for 1978, 1981, and 1984.

Courts included in this table.

For inclusion in this table, a court must have reported an identifiable tort, contract, and real property rights caseload, separate from all other civil cases, in at least two of the three target years. Five states reported tort, contract, and real property rights cases for all the courts which had jurisdiction over tort, contract and real property rights cases in those states. A total of 37 statewide courts, in 25 states, reported data. Of the 37 courts, 12 were general jurisdiction courts.

Comparison of aggregated filings over time.

The following data are from the 29 courts in 20 states that reported comparable data for all three reporting years. These figures can be found on the bottom line of Table 31.

The increase in tort, contract, and real property rights filings between 1978-81 was 14%, while the population for the states reporting these data increased by 3%. Between 1981-84, the population continued to grow another 3%, but the new filings decreased by 4%. These aggregate figures provide preliminary evidence for the existence of the "up-down" pattern discussed earlier in this section.

Comparison of courts whose filings increased or decreased during each of the time periods.

The following chart displays the number of courts whose tort, contract, and real property rights filings have increased or decreased during the two time periods:

	1978-81	1981-84
Filings increased significantly more than the population:	19	7
No significant difference between the change in population and filings:	5	3
Filings did not increase measureably during this period:	0	3
Filings increased at a rate slower than the population:	0	2
Filings decreased during this period:	5	22
Comparable data were not available for the period:	8	0

The "up-down" pattern described in the introduction to this section is illustrated in the above chart. Most of the courts reporting tort, contract, and real property rights cases during 1978-81 experienced significant increases in their filings. During the 1981-84 period, however, the pattern reversed itself--the majority of courts reported decreases in filings of these case types. Less than twenty-five percent of the courts reporting tort, contract, and real property rights cases during 1981-84

experienced increases in their filings at a rate significantly higher than increases in their populations. These patterns are more firmly established in the following chart.

The chart above displays how all of the courts which reported data during either of the two periods fit into specific categories. The following chart links the filing patterns of specific courts across the two time periods to test, more specifically, the various patterns identified earlier.

Comparison of patterns among the courts.

The following chart expands on the previous one by listing and categorizing courts by the patterns they followed. These patterns are explained in the introduction to this section (i.e., Part II). These are the patterns for those 29 courts in 20 states that reported comparable data for all three years. The (G) or (L) after each court indicates whether it is a general or limited jurisdiction court:

- "Up-up" Pattern (no caveats): Civil Court of NYC (L)
- "Down-up" Pattern (no caveats): Alaska Superior Court (G)
New Mexico Magistrate Court (L)
Oregon Justice Court (L)
- "Up-up" Pattern (change in '81-'84 filings was less than '78-'81 increase in filings): Nebraska County Court (L)
- "Up-up" Pattern (change in '81-'84 population exceeds or approximates change in '81-'84 filings): Hawaii Circuit Court (G)
Hawaii District Court (L)
Delaware Justice of the Peace (L)
- "Up-no significant change": Delaware Court of Common Pleas (L)
- "No significant change - no significant change": Delaware Superior Court (G)
- "Up-down" Pattern: Alabama District Court (G)
Arkansas Chancery and Probate Court (G)
Colorado District Court (G)
Colorado County Court (L)
Indiana County Court (L)
Indiana Municipal Court of Marion County (L)
Kentucky District Court (L)
Maine District Court (L)
North Carolina Superior Court (G)
North Carolina District Court (L)
Ohio Municipal Court (L)
Ohio County Court (L)

TABLE 31: Trend data for state courts that specifically reported tort, contract, and real property rights case filings for 1978, 1981, and 1984. (continued)

	Pennsylvania District Justice Court (L)		
	Tennessee Circuit Court and Chancery (L)		
8. "No significant change-down":	Oregon District Court (L)		<p>filings have continued to increase significantly more than the population over the two time periods studied in this Report. Three additional courts followed the "down-up" pattern with significant increases reported during 1981-84. Another four courts experienced increases in filings between 1981-84, but the increases were either less than or not significantly different from population increases during that same time period, or the increases were less than the increases reported during the 1978-81 period. The remaining 18 courts showed no evidence of a "litigation explosion" during 1981-84, and 17 of those courts experienced a decrease in filings during that period.</p>
	Rhode Island District Court (L)		
	Washington Superior Court (G)		
9. "Down-down" Pattern:	District of Columbia Superior Court (G)		
	Colorado Water Court (G)		

Of the courts studied in Table 31, the Civil Court of New York City is the only court whose

		1,090,707	1,239,120	1,185,666	3%	14%	3%	-4%	5%	9%

G = General jurisdiction court
L = Limited jurisdiction court
NC = Data are not comparable with other years.
d = The number of dispositions was the only data element provided that year.
-- = Data element is not applicable.

^fData are incomplete:
Hawaii-Circuit Court--Data do not include "unreported cases."

Indiana--County Court--Data do not include "other" cases or "redocketed civil" cases.
Maine--District Court--Due to implementation of a new reporting system, data are missing from two locations.
Ohio--Municipal Court and County Court--Data do not include cases classified as miscellaneous civil.
Oregon--Justice Court--Not all courts reported data.

TABLE 32: Trend data for state courts that specifically reported small claims case filings for 1978, 1981, and 1984.

Courts included in this table:

For inclusion in this table, a court must have reported an identifiable small claims caseload, separate from all other civil cases, in at least two of the three targeted years. Twenty-nine states reported small claims cases for all the courts which had jurisdiction over small claims cases in those states. A total of 39 statewide courts, in 33 states, reported data. Of the 39 courts, 11 were general jurisdiction courts.

Comparison of aggregated filings over time:

The following data are from the 29 courts, in 25 states, that reported comparable data for all three reporting years. These figures can be found on the bottom line of Table 32.

The increase in small claims filings between 1978-81 was 18%, as the population for that same period rose only 2%. The period between 1981-84 again provides a different picture. During this second period, the population continued to increase at a rate of 2% for those states reporting these data, yet small claims filings decreased by 6%. These aggregate figures tend to support the "up-down" pattern discussed in the introduction to this section.

Comparison of courts whose filings increased or decreased during each of the time periods.

The following chart displays the number of courts whose small claims filings have increased or decreased during the two time periods:

	1978-81	1981-84
Filings increased significantly more than the population:	21	6
No significant difference between the changes in population and filings:	6	10
Filings did not increase measurably during this period:	0	1
Filings increased at a rate slower than the population:	0	1
Filings decreased during this period:	3	19
Comparable data were not available for the period:	9	2

During the period 1978-81, the majority of courts experienced significant increases in small claims filings; however, that pattern was reversed during the following three years when most of the courts reporting data experienced decreases in small claims filings. Small claims data fit the "up-down" pattern described in the introduction to this section of the Annual Report.

The chart above displays how all of the courts which reported data during either of the

two periods fit into specific categories. The following chart links the filing patterns of specific courts across the two time periods to test, more explicitly, the various patterns identified earlier.

Comparison of patterns among the courts.

The following chart expands on the previous one by listing and categorizing courts by the patterns they follow. These are the patterns for those 29 courts, in 25 states, that reported comparable data for all three years:

1. "Up-up" Pattern (no caveats): North Dakota County Court (L)
Rhode Island District Court (L)
2. "No significant change-up": New Jersey Superior Court (G)
3. "Up-up" Pattern: (change in '81-'84 filings was less than '78-'81 increase in filings): Colorado County Court (L)
Hawaii District Court (L)
Illinois Circuit Court (G)
Maine District Court (L)
Missouri Circuit Court (G)
Vermont District Court (L)
4. "Up-up" Pattern (change in '81-'84 population exceeds or approximates change in '81-'84 filings): Alaska District Court (L)
New Hampshire District Court (L)
5. "Down-up" Pattern (Change in '81-'84 population exceeds or approximates change in '81-'84 filings): District of Columbia Superior Court (G)
New York District Court and City Court (L)
6. "No significant change - No significant change": Idaho District Court (L)
Ohio Municipal Court (L)
7. "Up-down" Pattern: California Municipal Court (L)
Indiana Superior Court and Circuit Court (G)
Indiana County Court (L)
Kansas District Court (G)
Kentucky District Court (L)
Nebraska County Court (L)
New Hampshire Municipal Court (L)
North Carolina District Court (L)
Ohio County Court (L)

TABLE 32: Trend data for state courts that specifically reported small claims case filings for 1978, 1981, and 1984. (continued)

<p>Oregon District Court (L) Pennsylvania-Philadelphia Municipal Court (L)</p> <p>8. "No significant change-down": California Justice Court (L) Iowa District Court (G)</p> <p>9. "Down-down" Pattern: Alabama District Court (L)</p>	<p>during both 1978-81 and 1981-84. In addition, the New Jersey Superior Court experienced a significant increase during 1981-84. Ten other courts also reported increases in their small claims filings, but the increases were either significantly less than the earlier increase during 1978-81, or were less than or approximated the population change for that same period which would indicate no "litigation explosion" at all. Eleven courts fit the "up-down" pattern, and another three courts also experienced decreases in small claims filings during 1981-84.</p>
---	---

Only two courts had significant and continuous increases in small claims filings

TABLE 32: Trend data for state courts that specifically reported small claims case filings for 1978, 1981, and 1984.

ⁱData are incomplete:
 Alaska--District Court--Data do not include cases from low volume courts.

TABLE 33: Trend data for state courts that specifically reported tort case filings for 1978, 1981, and 1984.

Courts included in this table:

For inclusion in this table, a court must have reported an identifiable tort caseload, separate from all other civil cases, in at least two of the three targeted years. Five states reported tort filings for all the courts which had jurisdiction over torts in those states. A total of 21 statewide courts, in 17 states, reported data. Of the 21 courts, 17 were general jurisdiction courts.

Comparison of aggregated filings over time:

The following data are from the 17 courts in 13 states that reported comparable data for all three reporting years. These figures can be found on the bottom line of Table 33.

The increase in tort case filings between 1978-81 was only 2%, while the population for those states grew 4% during the same time period. Between 1981-84 the population grew another 4% while tort filings increased by 7%. For the entire period 1978-84 total tort filings increased 9%, however, the population also increased by 8%. This is the one case type, of those studied in this section, where the aggregate number of cases increased over both time periods evaluated. This does not qualify as a "litigation explosion", however, since the population increased at approximately the same rate as did the tort filings.

Comparison of courts whose filings increased or decreased during each of the time periods.

The following chart displays the number of courts whose tort filings have increased or decreased during the two time periods:

	1978-81	1981-84
Filings increased significantly more than the population:	8	5
No significant difference between the changes in population and filings:	5	5
Filings increased at a rate slower than the population:	1	1
Filings decreased during this period:	5	8
Comparable data were not available for the period:	2	2

Although the aggregate filings increased somewhat over the years studied in Table 33, the above chart indicates that tort filings increased significantly in less than half of the courts reporting data in this table. During the period 1981-84, only one-third of the courts reporting data had a significant increase in tort filings--more courts experienced decreases than significant increases in tort filings during 1981-84. The chart above displays how all of the courts which reported data during either of the two periods fit into specific categories. The following chart links the filing patterns of

specific courts across the two time periods, to test more explicitly, the various patterns identified earlier.

Comparison of patterns among the courts.

The following chart expands on the previous chart by listing and categorizing courts by the patterns they followed. These patterns are explained in the introduction to this section (i.e., Part II). These are the patterns for those 17 courts that reported comparable data for all three years. The (G) and (L) after each court indicates whether it is a general or limited jurisdiction court.

1. "Down-up" Pattern
(no caveats): Alaska Superior Court (G)
California Superior Court (G)
Florida Circuit Court (G)
2. "Up-up" Pattern:
(change in '81-'84)
filings was less
than '78-'81 increase
in filings): Hawaii Circuit Court (G)
Washington Superior Court (G)
3. "Up-up" Pattern
(change in '81-'84
population exceeds
or approximates
change in '81-'84
filings): Alaska District Court (L)
4. "Down-up" Pattern
(Change in '81-'84
population exceeds
or approximates
change in '81-'84
filings): North Dakota District
Court (G)
5. "No significant change
- no significant
change": Ohio Court of Common
Pleas (G)
Maine Superior Court (G)
6. "Up-down"
Pattern: Colorado District Court (G)
Hawaii District Court (L)
Kansas District Court (G)
New York Supreme Court
and County Court (G)
Ohio County Court (L)
Ohio Municipal Court (L)
Tennessee Circuit Court
and Chancery Court (G)
7. "No significant
change-down": Idaho District Court (G)

Of the courts reporting comparable data for all three years, none experienced significant increases during both 1978-81 and 1981-84. Three additional courts reported decreases during the first period but significant increases in the 1981-84 period. These three courts, however, are in states that also experienced some of the

TABLE 33: Trend data for state courts that specifically reported tort case filings for 1978, 1981, and 1984. (continued)

largest increases in population (i.e., Alaska, California, and Hawaii).

The largest numerical increase in tort filings between 1981-84 is in the California Superior Court (i.e., an increase of over 16,000 cases). This increase, accounts for almost the entire increase in the aggregate figures between 1981-84. Between the years 1978-84 however, the increase in the rate of filings was 12%, but was matched by a 12% increase in the population.

In addition to the fact that most states which have large increases in filings also have

the largest increases in population, and therefore do not qualify as being especially litigious, another eight courts reported decreases in filings, and two other state courts reported no significant change in their filings over both periods studied. Although tort filings do not fit the "up-down" pattern as strongly as do other case types, neither do they provide any evidence of an increased propensity of the American public to sue.

TABLE 33: Trend data for state courts that specifically reported tort case filings for 1978, 1981, and 1984.

ⁱData are incomplete:
Alaska--District Court--Data do not include low volume courts.

Florida--Circuit Court--Data do not include professional tort cases.
Hawaii--Circuit Court--Some tort cases are included in transfers.
Idaho--District Court--Some torts are included in the unclassified category.
Maryland--Circuit Court--Data do not include "unreported cases."

TABLE 34: Trend data for state courts that specifically reported contract case filings for 1978, 1981, and 1984.

Courts included in this table:

For inclusion in this table, a court must have reported an identifiable contract caseload, separate from all other civil cases, in at least two of the three targeted years. Two of the states reported contract filings for all the courts which had jurisdiction over contract cases in those states. A total of 15 statewide courts, in 13 states, reported data. Of the 15 courts, 11 were general jurisdiction courts.

Comparison of aggregated filings over time:

The following data are from the 11 courts in 10 states that reported comparable data for all three reporting years. These figures can be found on the bottom line of Table 34.

The increase in contract case filings between 1978-81 was 14%, while the population for those states grew 5% during the same period. Between 1981-84, the population grew another 4%, however, new contract filings decreased by 15%--a clear reversal in the earlier trend of caseload expansion. For the entire period 1978-84, total contract filings decreased 4% while the population increased 9%. These aggregate data support the "up-down" pattern for contract filings.

Comparison of courts whose filings increased or decreased during each of the time periods.

The following chart displays the number of courts whose contract filings have increased or decreased during the two time periods:

	1978-81	1981-84
Filings increased significantly more than the population:	7	2
No significant difference between change in population and filings:	1	1
Filings increased at a rate slower than the population:	1	2
Filings decreased during this period:	2	10
Comparable data were not available for the period:	4	0

Once again, the "up-down" pattern materializes. Most of the courts studied during the 1978-81 period experienced significant

increases in filings, while this trend reversed itself during the period 1981-84 when most courts experienced decreases in their filings of contract cases. The Florida Circuit Court and the Texas District Court were the two courts that experienced significant increases in their case filings, yet they also recorded the largest increases in population for those courts that reported data during 1981-84. The chart above displays how all of the courts which reported data during either of the two periods fit into specific categories. The following chart links the filing patterns of specific courts across the two time periods to test, more specifically, the various patterns identified earlier.

Comparison of patterns among the courts.

The following chart expands on the previous one by listing and categorizing courts by the patterns they followed. These patterns are explained in the introduction to this section (i.e., Part II). These are the patterns for those 11 courts that reported comparable data for all three years. The (G) or (L) after each court indicates whether it is a general or limited jurisdiction court:

- "Up-up" Pattern (no caveats): Florida Circuit Court (G)
- "Up-up" Pattern (change in '81-'84 population exceeds or approximates change in '81-'84 filings): Hawaii Circuit Court (G)
Hawaii District Court (L)
- "Up-down" Pattern: Colorado District Court (G)
Maine Superior Court (G)
North Dakota District Court (G)
Ohio County Court (L)
Ohio Municipal Court (L)
Tennessee Circuit Court and Chancery Court (G)
- "Down-down" Pattern: Arkansas Court of Common Pleas (L)
Washington Superior Court (G)

The Florida Circuit Court is the only court that can lay claim to a large increase in contract filings. Courts in 8 other states followed the down trend after 1981.

TABLE 34: Trend data for state courts that specifically reported contract case filings for 1978, 1981, and 1984.

G = General jurisdiction court
L = Limited jurisdiction court
NC = Data are not comparable with other years.
-- = Data elements are inapplicable.

^fData are incomplete:
Arkansas--Court of Common Pleas--One county reported no data in 1978.

Hawaii--Circuit Court--Some cases are included in transfers.
Maryland--Circuit Court--Data do not include some "unreported cases."
Ohio--Municipal Court and County Court--Some contract cases are included in miscellaneous civil cases.

TABLE 35: Trend data for state courts that specifically reported triable felony case filings for 1978, 1981, and 1984.

Courts included in this table:

For inclusion in this table, a court must have reported an identifiable triable felony caseload, separate from all other criminal cases, in at least two of the three targeted years. A total of 28 statewide courts in 28 states reported data. All of these courts are general jurisdiction courts.

Comparison of aggregated filings over time:

The following data are from the 24 courts in 24 states that reported comparable data for all three reporting years. These figures can be found on the bottom line of Table 35.

The increase in triable felony cases between 1978-81 was 28%, while the population for the states reporting these data increased by 3%. Between 1981-84, the population continued to grow another 3%, and new triable felony filings increased by 7%. The pattern for these aggregate filings evidence a considerable slowing of the filing pattern during 1981-84. In fact, during the 1981-84 period, triable felony case filings did not increase at a rate significantly greater than the rate at which the population increased.

Comparison of courts whose filings increased or decreased during each of the time periods.

The following chart displays the number of courts whose triable felony filings have increased or decreased during the two time periods:

	1978-81	1981-84
Filings increased significantly more than the population:	22	8
No significant difference between the changes in population and filings:	0	6
Filings did not increase measureably during this period:	0	1
Filings increased at a rate slower than the population:	0	2
Filings decreased during this period:	2	11
Comparable data were not available for the period:	4	0

Approximately three-fourths of those courts reporting triable felony filings between 1978-81 experienced significant increases in their caseloads. This tendency for increased filings, however, was greatly diminished during 1981-84 when almost twice as many courts reported decreases in their felony filings as courts who reported filing increases significantly greater than population increases. This observation is more clearly illustrated in the following chart.

The chart above displays how all of the courts which reported data during either of the

two periods fit into specific categories. The following chart links the filing patterns of specific courts across the two time periods to test, more specifically, the various patterns identified earlier.

Comparison of patterns among the courts.

The following chart expands on the previous one by listing and categorizing courts by the patterns they follow. These patterns are explained in the introduction to this section (i.e., Part II). These are the patterns for those 24 courts in 24 states that reported comparable data for all three years.

1. "Up-up" Pattern (no caveats): Alaska Superior Court
District of Columbia Superior Court
New Jersey Superior Court
2. "Down-up" Pattern (no caveats): Minnesota District Court
3. "Up-up" Pattern: (change in '81-'84 filings was less than '78-'81 increase in filings): Arkansas Circuit Court
Hawaii Circuit Court
Illinois Circuit Court
New York Supreme Court and County Court
4. "Up-up" Pattern (change in '81-'84 population exceeds or approximates change in '81-'84 filings): Arizona Superior Court
California Superior Court
Colorado District Court
Idaho District Court
North Dakota District Court
Virginia Circuit Court
Washington Superior Court
5. "Up-down" Pattern: Georgia Superior Court
Kansas District Court
Maine Superior Court
North Carolina Superior Court
Ohio Court of Common Pleas
Oregon Circuit Court
Rhode Island Superior Court
Wyoming District Court
6. "Down-down" Pattern: Wisconsin Circuit Court

Of the 24 statewide courts reporting data in Table 35, only four experienced increases in filings that continued to increase significantly more than the population. The number of triable felony filings decreased during the period 1981-84 in nine of the statewide courts reported

TABLE 35: Trend data for state courts that specifically reported triable felony case filings for 1978, 1981, and 1984. (continued)

in this table. As is the case with torts, it appears as though the rate of increases in felony filings has decreased. Additionally, downward trends were experienced in a large number of statewide courts. This trend in felony cases,

may be a function of changes in a variety of variables ranging from: the actual crime rate, the rate of reported crime, the police clearance rate, state criminal law, and prosecuting rates.

TABLE 35: Trend data for state courts that specifically reported triable felony case filings for 1978, 1981, and 1984.

Note: All of the courts listed above are general jurisdiction courts.
 NC = Data are not comparable with other years.
 -- = Data element is not applicable.

ⁱData are incomplete:
 Arizona--Some felonies are included in an unclassified category.
 Hawaii--Felony figures do not include reopened prior cases included in the unclassified civil category.

^jExplanation of data included in the category:
 Arkansas--Felony figures include DWI/DUI cases.

California--Felony figures include DWI/DUI cases.
 Illinois--Felony caseload data include preliminary hearings from courts "downstate."
 Iowa--Felony cases include third offense DWI/DUI cases in 1981 and 1984.
 Maine--Felony figures include classes A, B, and C.
 New York--Felony figures include DWI/DUI cases.
 Wisconsin--Felony figures include limited felony cases.

Part III
State court
system charts

Part III State court system charts

Section III begins with a prototype chart of a state court system. The prototype is followed by the organization charts for each state, presented in alphabetical order. Each chart illustrates, where appropriate, the four basic categories of state courts: courts of last resort, intermediate appellate courts, general jurisdiction trial courts, and limited jurisdiction trial courts. The routes of appeal among the courts are indicated by lines and arrows connecting the courts. All routes of appeal are "up," except where arrows indicate that they are "down."

CSIM case types information

Each appellate court has a section headed "CSIM case types" which identifies a variety of model case types, separated into mandatory and discretionary cases. These case types are defined in the 1984 State Appellate Court Jurisdiction Guide for Statistical Reporting. Each trial court also has a section headed "CSIM case types," which lists the civil, criminal, traffic/other violation, and juvenile subject matter jurisdiction of that court using the model case types defined in State Court Model Statistical Dictionary or its Supplement. These appellate and trial case types are used in the summary tables in Parts I and II of this volume.

Unless the "CSIM case types" information provided for each court indicates that the court has exclusive jurisdiction over a specific case type, the simple listing of a case type indicates that the court shares that jurisdiction with another court or courts in that state. The reader can assume that the absence of a case type in that section indicates that the court does not have jurisdiction over that subject matter. The information in these CSIM case type sections are derived from the Appellate and Trial Court Jurisdiction Guides for Statistical Reporting, which were published for the first time in 1985 for the year 1984, and are updated each time data are collected for another volume in this Annual Report series. These guides classify all the data elements reported by each state into the CSIM model classification schemes (which appear in Appendix C).

To avoid confusion, it should be pointed out that situations exist in the appellate courts where one court has both mandatory and discretionary jurisdiction over the same case type. Among the explanations that might account for this situation are the following: (1) some appellate courts hear appeals from a variety of trial courts that have jurisdiction over similar case types. Whether a case is mandatory or discretionary in the appellate courts may depend on the review it has already received in courts that have heard the case earlier, e.g., Does a case come directly from a trial court, or through an intermediate appellate court?; (2) a second explanation rests in the use of broad case types. The criminal case type, for example, includes felonies and misdemeanors. The appellate court may have to review felonies, but may have discretion to hear misdemeanors; and (3) some statutory provisions or court rules create situations where a mandatory appeal is converted into a discretionary appeal--for example, failure to file an appeal in a timely manner.

The model classification schemes include incidental appellate jurisdiction exercised by many trial courts. This appellate jurisdiction is specifically indicated in the listing of case types for each trial court. A trial court that

hears appeals from both other trial courts and administrative agencies is indicated by "civil appeals" in its list of civil case types. If it hears only one of these types of appeals, the type is specified. Appeals from juvenile cases are included in civil appeals, and appeals from traffic/other violation cases are counted with criminal appeals.

Other jurisdictional information provided elsewhere in this Report

Some important jurisdictional information needed to compare caseload data among the states is not contained on the state organization charts, but is found elsewhere in this volume. The point at which cases are counted, for example, and what is counted as a case are important in comparing data between states. Notes in the summary tables in this volume indicate when civil cases are counted. The count in criminal cases is much more complex and is explained in Figure E. Figure G illustrates the unit of count in juvenile cases. Figure F indicates how differently felony cases are defined among the states.

The state court organization charts do not indicate the wide range of dollar amount minimums and maximums in tort, contract, real property rights, and small claims cases among the trial courts--which is essential in any comparison of those data. That information is provided in Figure D.

Although the organization charts reference the existence of incidental appellate jurisdiction in the trial courts where appropriate, they do not indicate whether those appeals are de novo or on the record. For obvious reasons de novo appeals have a greater impact on court administration than "on the record" appeals. Therefore, it is important to classify appeals by these categories. These classifications of appeals are provided in Figure H.

Organizational information

In addition to identifying all of the courts within a state and their routes of appeal, the charts indicate the number of circuits/districts/divisions/counties/courts at each court level and the number of judges or justices. The charts also indicate whether jury trials are normally available for the case types within each trial court. Figure J provides a summary look at the number of judges in the state courts.

Missing jurisdictional information

This Annual Report is devoted to caseload inventory; therefore, the jurisdictional information provided here relates specifically to the intricacies of counting caseload by general subject matter categories in order to make the numbers as comparable as possible, and does not generally address non-statistical points such as the type of the litigants or the nature of the statutory restrictions on jurisdiction.

The nature of the difference between mandatory and discretionary jurisdiction in the appellate courts, for example, is not spelled out in the court organization charts and as discussed earlier, may involve as simple a matter as the timeliness of filing the cases. CSIM Project staff are very aware that these kinds of questions may be both important and interesting to the reader. Now that the jurisdiction guides

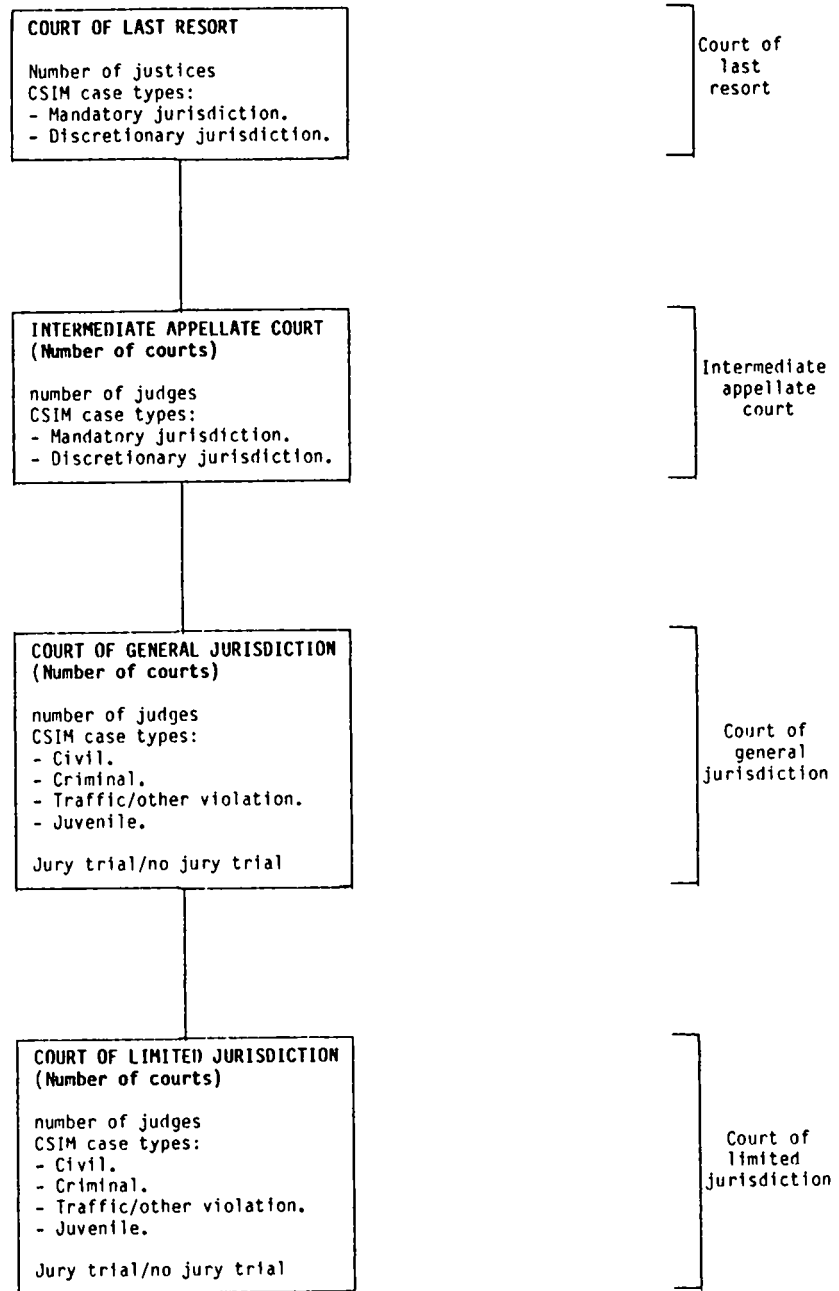

assure the proper grouping of similar cases, staff can divert some resources to developing new techniques for expanding the jurisdictional information provided in the court organization charts.

A few of the state court organization charts contain a special note indicating the existence of a court that is not included in the overall chart. This situation exists when a state has a court of special jurisdiction that receives only complaints that would be handled by administrative agencies and boards in other states. In order to maintain this Project's fundamental goal of reporting comparable national data on state courts, complaints handled by such bodies are not reported in this database. The acknowledgment of these courts in the organization charts alerts the reader to the fact that some states treat these adjudicatory bodies as courts, even though their caseloads do not fit within any CSIM Project case definition.

The exclusion of agencies that hear administrative complaints also raises questions about the relationship between caseload handled by judges practicing administrative law and the regular state court caseload. Figure I begins to provide information concerning the appellate link between administrative agency cases and the state courts. Although the CSIM Project has not been charged with examining this issue, its relevance may require attention at some future date.

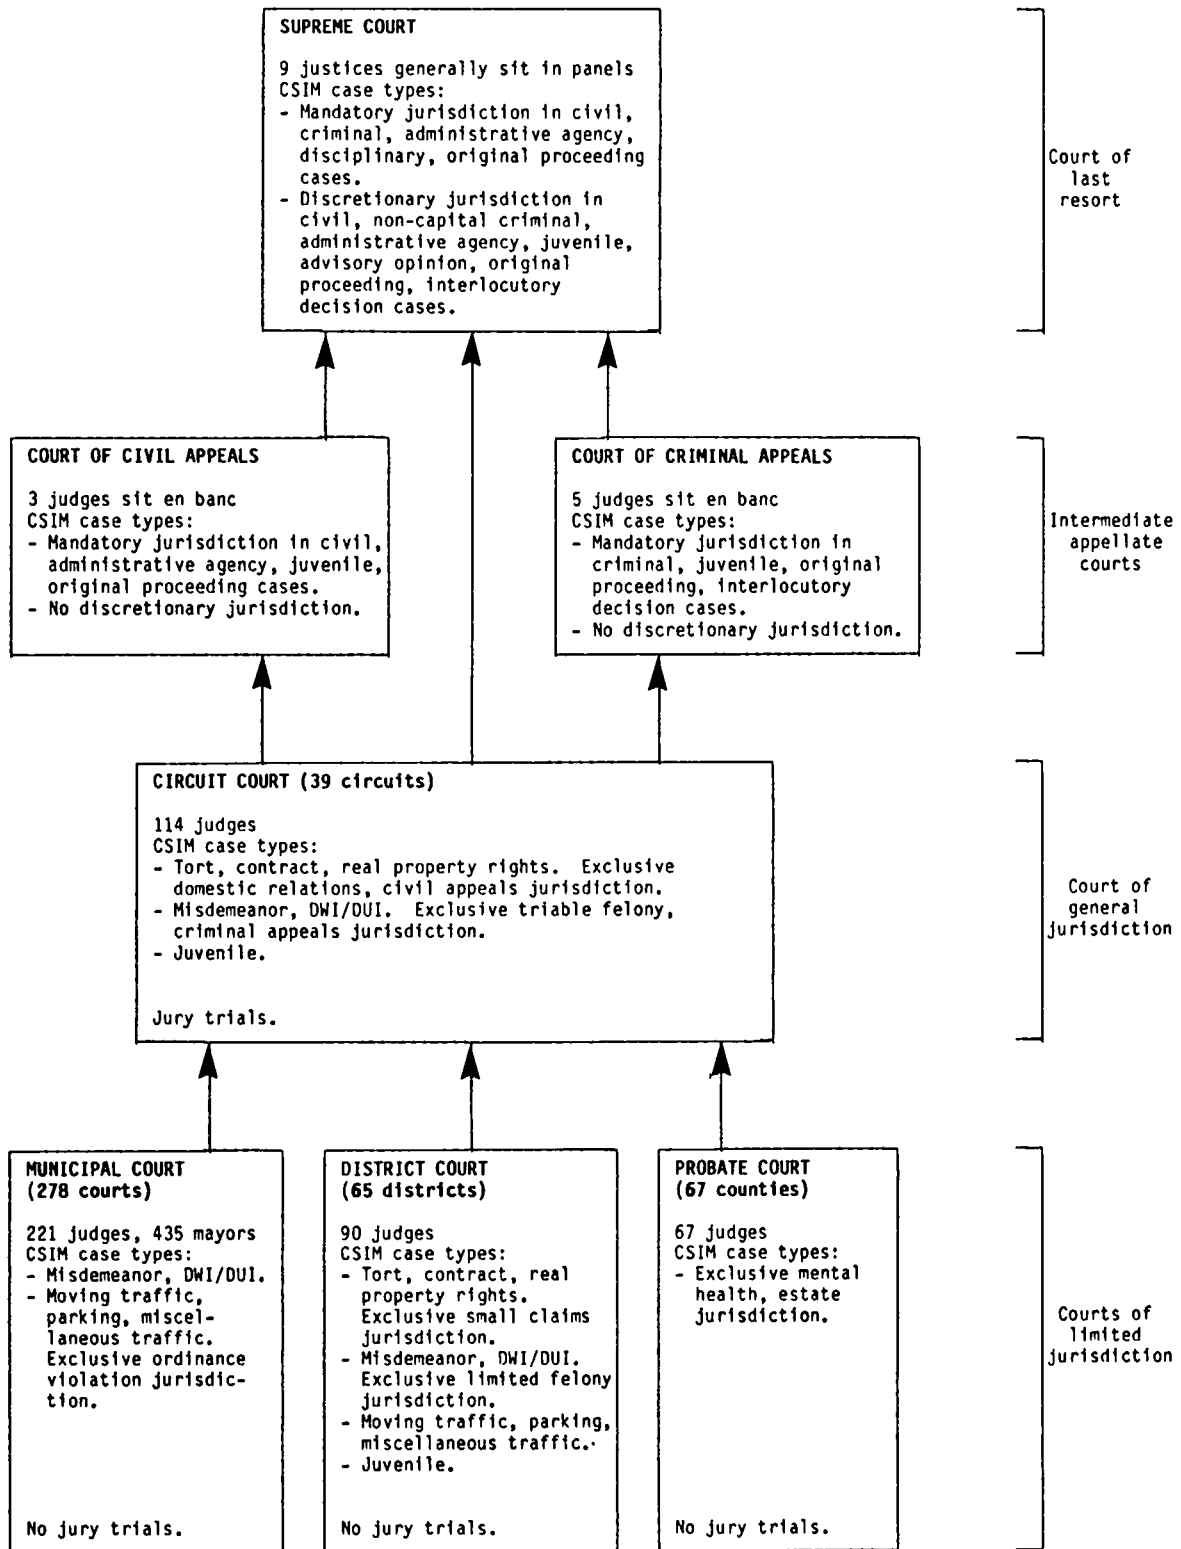

Finally, the following charts do not distinguish between state courts, and local courts. There are many components to this classification scheme involving such things as: revenue and expenditure concerns; administrative authority to enforce such things as uniform data collection methods; the extent to which a court handles state and/or local laws, etc. The distinction between state and local courts cannot be made on these charts until a typology is agreed upon for this dimension of court administration.

NOTE: Be sure to read the text at the beginning of this section which contains important information relevant to each chart.

TENNESSEE COURT SYSTEM, 1984

*The state of Tennessee was divided into 31 judicial districts on September 1, 1984. There is a Circuit in each district. Twenty three districts have separate Chancery Courts, and thirteen districts have separate Criminal Courts. The Circuit Court has jurisdiction over Chancery and Criminal matters in the remaining circuits. There is one presiding judge for each district. As a result of the redistricting, two Law and Equity Courts became Circuit Courts and the other two became Chancery Courts.

TEXAS COURT SYSTEM, 1984

*Some Municipal and Justice of the Peace Courts may appeal to the District Court.

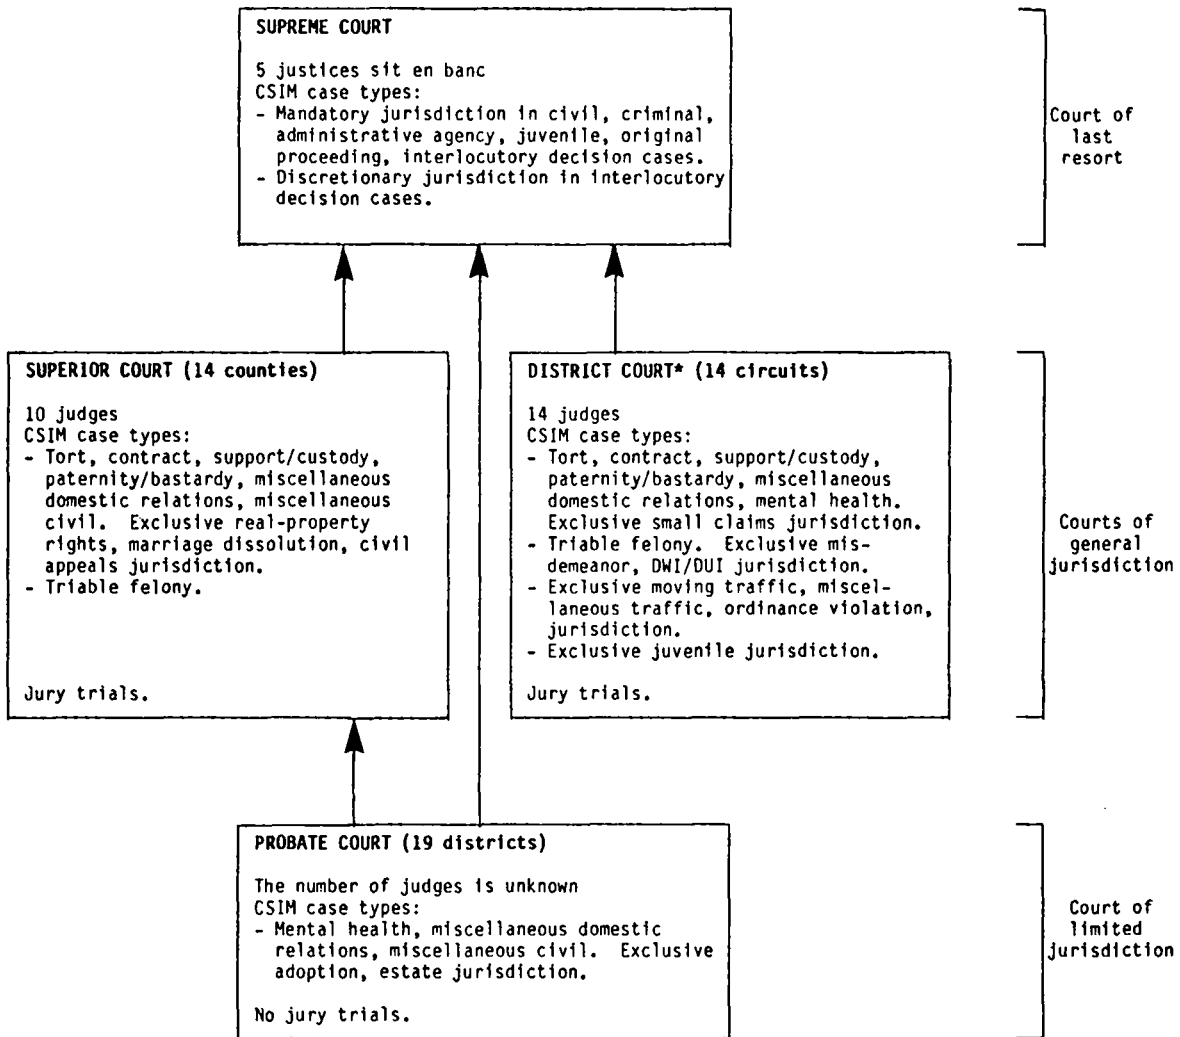

NOTE: Be sure to read the text at the beginning of this section which contains important information relevant to each chart.

UTAH COURT SYSTEM, 1984

NOTE: Be sure to read the text at the beginning of this section which contains important information relevant to each chart.

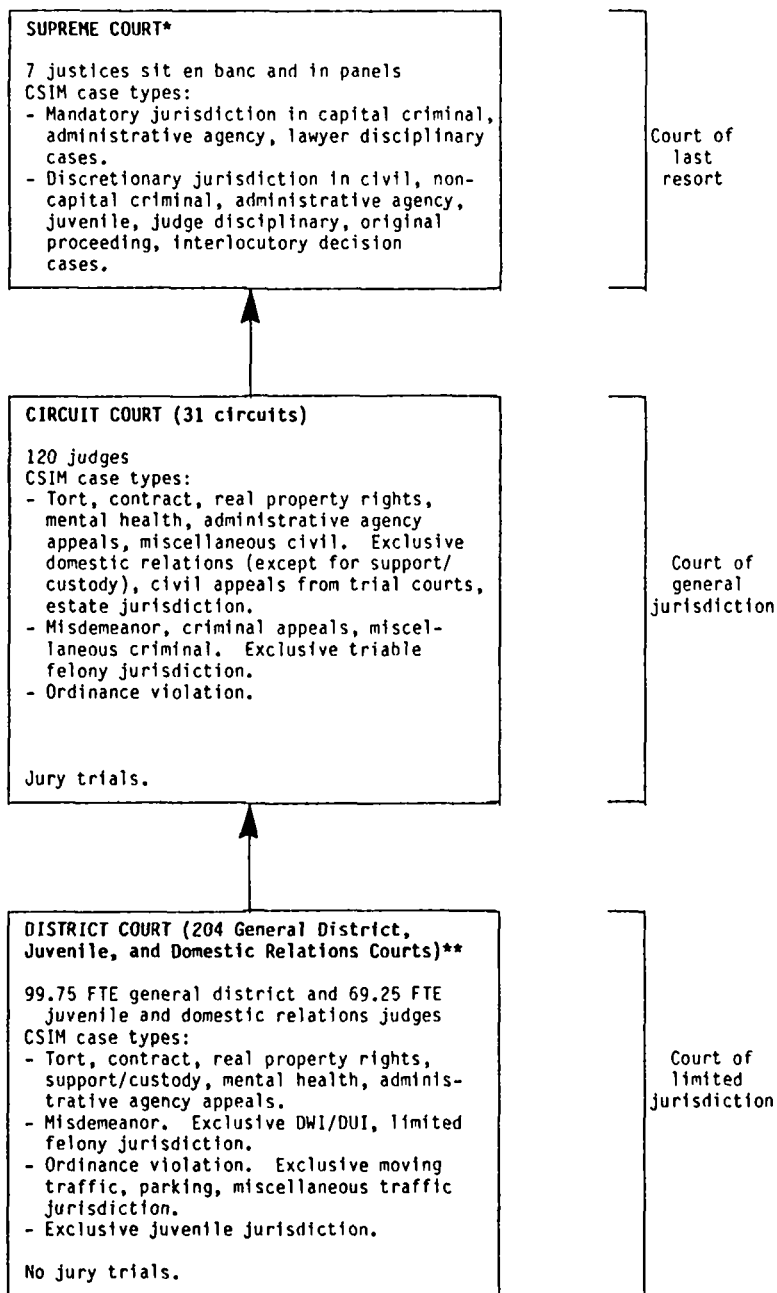

VERMONT COURT SYSTEM, 1984

*The District Court was created as a court of limited jurisdiction, but since its creation, has steadily increased its scope to include almost all criminal business. In 1983, the District Court was granted jurisdiction over all criminal cases, and has become the court of general jurisdiction for most criminal matters.

NOTE: Be sure to read the text at the beginning of this section which contains important information relevant to each chart.

VIRGINIA COURT SYSTEM, 1984

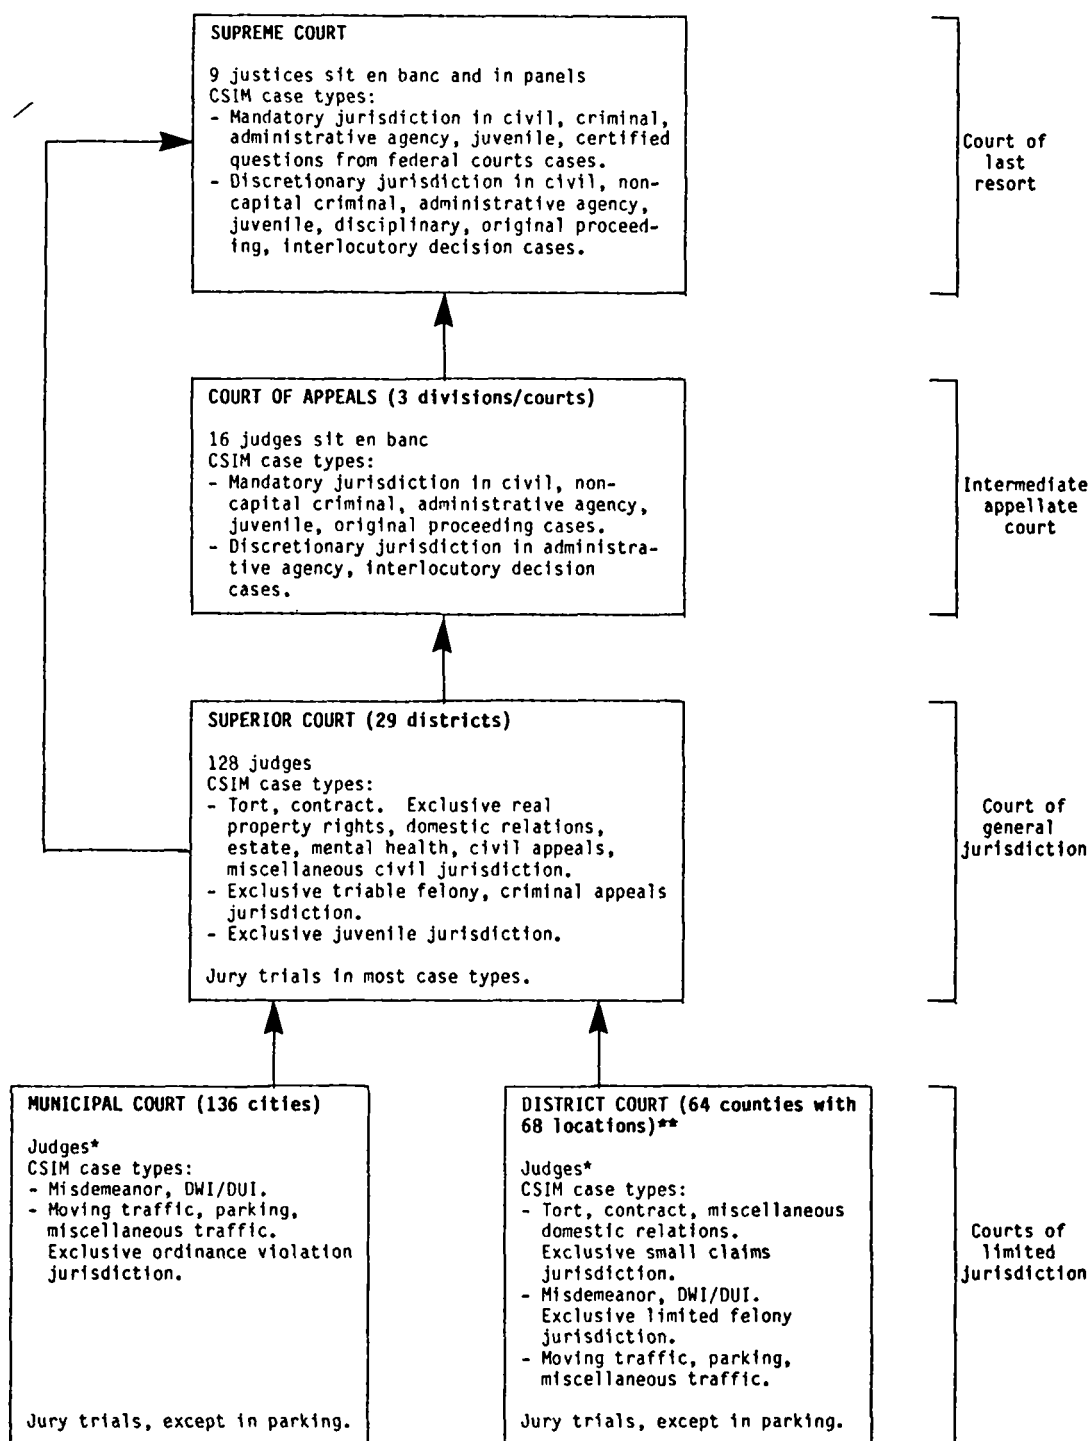

*The Virginia Court of Appeals, an intermediate appellate court, became effective January 1, 1985.

**The District Court is referred to as the Juvenile and Domestic Relations Court when hearing juvenile and domestic relations cases, and as the General District Court for the balance of the cases.

NOTE: Be sure to read the text at the beginning of this section which contains important information relevant to each chart.

WASHINGTON COURT SYSTEM, 1984

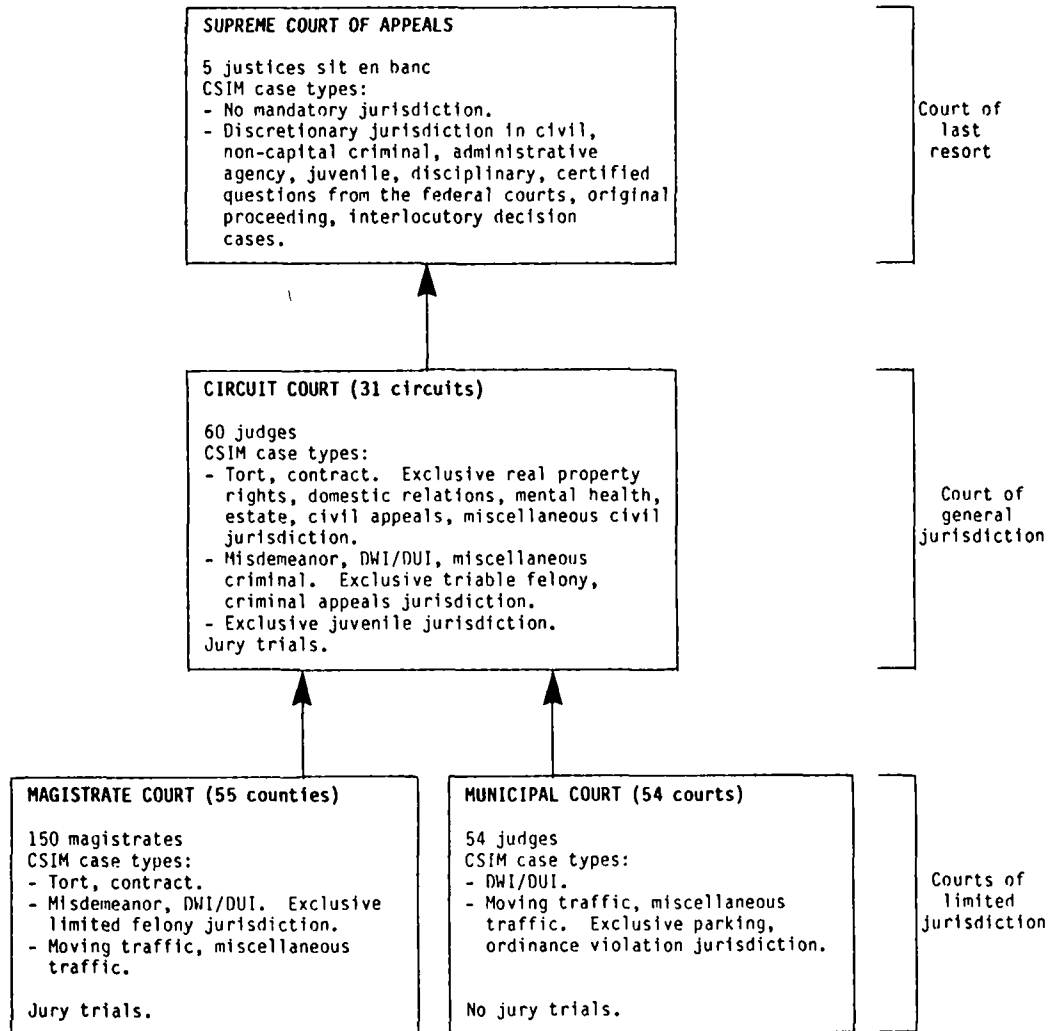

*There are 203 judges assigned to the Municipal Court and District Court: 164 are attorneys, 39 are non-attorneys; 87 are full-time, 116 are part-time.

**District Court provides services to municipalities that do not have a Municipal Court.

FIGURE H: State trial courts with incidental appellate jurisdiction, 1984.

"Incidental appellate jurisdiction" is a term adopted by the COSCA Court Statistics and Information Systems Committee to designate the authority given to review civil and criminal cases of other trial courts (or divisions thereof) or of administrative agencies. An "X" in the appropriate column indicates whether a court has such incidental appellate jurisdiction. All state trial courts are listed in this figure in order to clearly identify those which have incidental appellate jurisdiction.

The source of trial court appeals indicates the courts from which trial court appeals come, and whether they are heard de novo or on the record. This distinction between de novo and on the record appeals is important for a variety of reasons. First, from an administrative perspective, de novo appeals consume more

resources than on the record appeals. Second, the existence of an appeal in the trial court may affect subsequent appeals of right in the appellate courts. Finally, appeals from administrative agencies to the trial courts provide the first link between administrative law and the regular state courts.

An "X" in the column entitled "Source of trial court appeals" indicates the court(s) from which appeals are taken. Additionally, there is information next to the "X" to indicate whether the appeal is: on the record; (de novo) on the record; or de novo.

The state court system organization charts found in Part III of this volume also indicate the routes of appeal for both trial and appellate courts in each state court system.

Jurisdiction codes:
G = General jurisdiction court.
L = Limited jurisdiction court.

FIGURE I: Route of appeals of administrative agency cases to state appellate courts, 1984.

An important, but often overlooked component of state court systems is the link between "conventional" court cases that routinely make up the workloads of state courts (e.g., criminal, tort, and juvenile cases), and cases involving administrative agencies. Figure I demonstrates the link between these two important components of the legal system by identifying the route of appeals of administrative agency decisions to the state appellate courts. A blank space indicates that no information was available for that data element. All codes used in this figure are defined at the end of this figure.

There are three basic sources of these cases. They may come to the appellate court directly from either the agency, the trial courts, or the intermediate appellate courts. The most frequently cited administrative agencies

from which appeals are taken directly to the appellate courts are specifically identified in this table using the generic terms: "Public Service Commission," "Workers' Compensation Commission," and "Unemployment Insurance Commission." Other agencies are identified when appropriate.

To further enhance an understanding of the link between administrative law and conventional state courts, an "M" and "D" are used in lieu of the "X" employed in the previous tables. An "M" indicates a mandatory appeal coming from the specified source; a "D" means a discretionary appeal, and an "M/D" represents either a mandatory or discretionary appeal, depending on the situation. An "O" is used when an appeal cannot come directly from the specific source.

Rhode Island	5	--	19	63 (data are incomplete)

FIGURE J: Number of judges/justices in the state courts, 1984.(continued)

State:	Court(s) of last resort	Intermediate appellate court(s)	General jurisdiction court(s)	Limited jurisdiction court(s)
South Carolina	5	6	31	662 (includes 320 magistrates)
South Dakota	5	--	183 (includes 13 part-time lawyer magistrates, 15 lay magistrates, 81 full-time magistrate/clerks, 32 part-time lay magistrate/clerks)	--
Tennessee	5	21	122	434 (includes 38 part-time judges)
Texas	18	80	367	2,405 (includes 940 justices of the peace)
Utah	5	--	29	209 (includes 163 justices of the peace)
Vermont	5	--	24	33 (1982 figure)
Virginia	7	--	120	162
Washington	9	16	128	203 (includes 116 part-time judges)
West Virginia	5	--	60	204 (includes 150 magistrates)
Wisconsin	7	12	190	213
Wyoming	5	--	17	121 (includes 26 justices of the peace)
Total	361	716	8,401	18,158

-- = The state does not have a court at the indicated level.

NOTE: This table identifies, in parentheses, all individuals who hear cases but are not entitled judges/justices. Some states, however, may have given the title "judge" to officials who are called magistrates, justices of the peace, etc., in other states.

Appendices

Appendix A: Technical discussion of former estimation procedures

A. Calculation of Missing and Incomplete Data

Least squares linear regression was used to estimate the total volume of filings and dispositions in appellate courts and for the total civil, criminal, and juvenile caseloads in trial courts in the 1981 Annual Report. That procedure was similar to the one that was used to estimate national totals for previous editions of the Annual Report. As available from state to state, a group of independent variables was used in a series of regression equations to predict 1981 filings and dispositions for states for whom data were not available. Each regression equation was calculated using data from all 50 states, the District of Columbia, Puerto Rico, and, for trial courts, Guam.

The best predictive equation for each dependent variable was identified, using a stepwise procedure. Variables were added to the predictive equation only if their addition was statistically significant at the $p < .001$ level. This equation was then used to provide the estimates for all courts for which all the

independent variables included in the predictive equation were available. The regression was calculated again using a reduced number of independent variables, tailored to the data available for the remaining states. This resulted in a hierarchy of regression equations for each figure to be predicted. The predictive equations that were used to estimate filings and dispositions are available in the previous editions of this series.

This year, however, it was determined that when the numerous variations in the way cases are counted in the trial and appellate courts are considered with the number of courts that report complete and comparable data for the various case types, any effort to compute national estimates for missing data would be based on too small a sample, resulting in an unreliable set of figures. These figures, therefore, were not computed. We hope to reinstate this procedure for the 1985 Annual Report, depending on the quantity and quality of data. For this Report, we have included only totals of reported cases in the appellate and trial courts.

Boldface headings indicate the classifications used by the CSIM Project.
 N/A = The case type is handled by the court, but the data are unavailable.
 X = The data for this case type are known to be included in the total but are unavailable by category.
 -- = Data element is not applicable.

NOTE: Begin pending, filed outside the parentheses, disposed outside the parentheses, and end pending figures reported as discretionary jurisdiction cases represent petitions/motions for review. Filed figures inside the parentheses represent those newly filed petitions/motions that were granted review during the time period covered on this profile. For those interested, filed figures inside the parentheses can then be added to total mandatory jurisdiction cases filed to arrive at the number of new cases that the court will ultimately consider "on the merits." Disposed figures inside the parentheses represent the number of discretionary petitions granted review that were disposed of "on the merits." This number is rarely available, and is usually included in either the total discretionary petitions disposed, or the mandatory jurisdiction cases. For those interested, disposed figures inside the parentheses can be added to total mandatory jurisdiction cases disposed to arrive at the number of cases that the court disposed of "on the merits."
